No. 641. EMPLOYEES IN NONAGRICULTURAL ESTABLISHMENTS—STATES: 1975 TO 1986

[In thousands. For coverage, see headnote, table 640. National totals differ from the sum of the State figures because of diff benchmarks among States and differing industrial and geographic stratification, Based on 1972 Standard Industrial Classific Manual, see text, section 13]

Includes mining, not shown separately.
 Represents Washington, DC metropolitan area.

# VO. 642. NONAGRICULTURAL INDUSTRIES—NUMBER OF EMPLOYEES, AND NUMBER AND EARNINGS OF PRODUCTION WORKERS: 1980 TO 1986

innual averages of monthly figures. Covers all full- and part-time employees who worked during, or received pay for, any part of the pay period including the 12th of the month. For mining and manufacturing, data refer to production and related workers; for construction, to employees engaged in actual construction work; and for other industries, to nonsupervisory employees and working supervisors. See also headnote, table 640. See *Historical Statistics, Colonial Times to 1970*, series D 127-151, D 802-810, and D 877-892, for related data]

### No. 650. AVERAGE ANNUAL PAY, BY STATE: 1984 TO 1986

(the deliters except percent change. For workers covered by State unemployment insurance laws and for Federal civilian workers covered by unemployment compensation for Federal employees, approximately 90 percent of total civilian employment. Excludes most agricultural workers on small farms, all Armed Forces, elected officials in most States, relived employees, most domestic workers, employees of certain nonprofit organizations and most self-employed individuals. Pay includes bonuses, cash value of meets and lodging, and tips end other gratuities. Minus sign (—) indicates decrease

## NO. 660. MAJOR COLLECTIVE BARGAINING SETTLEMENTS—AVERAGE PERCENT ADJUSTMENTS IN WAGES AND COMPENSATION NEGOTIATED: 1975 TO 1986

[In percent, except se indicated. Data represent private nonfarm industry settlements effecting production and related workers in manufacturing and nonsupervisory workers in nonmanufacturing industries. Wage data cover units with 1,000 workers or more. Compensation data relate to units of 5,000 or more. Data relate to contracts negotiated in each calendar year but exclude possible adjustments in wages under cost-of-living adjustment (COLA) clauses, except increase guaranteed by the contract. Includes all settlements, whether wages and benefits were changed or not. Minus sign (—) indicates decrease]

#### No. 664. OCCUPATIONAL INJURY AND ILLNESS INCIDENCE RATES, SELECTED INDUSTRIES: 1975 TO 1985

[Rates per 100 full-time employees. For nonfarm employment data, see table 642. Rates refer to any occupational injury or illness resulting in (1) fatalities, (2) lost workday cases, or (3) nonfatal cases without lost workdays. Incidence rates were calculated as: Number of injuries and illnesses or lost workdays divided by total hours worked by all employees during year multiplied by 200,000 as base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks a year). Based on the 1972 Standard Industrial Classification (SIC) Manual]

#### NO. 656, U.S. UNION MEMBERSHIP, BY STATE: 1975 TO 1982

[Date represent enrusi average, duse-paying full-time equivalent membership derived from financial records. Excludes unemployed members, in general, annual per capita revenues received by the perent organization were divided by the per capita rate to yield membership. For unions with multiple duse structures or other structures, other methods were used. See text, section 13 and source for details. A right-to-work State has laws which prohibit collective bargaining contracts from including clauses requiring union membership as a condition of employment]

Section 14

## Income, Expenditures and Wealth

section presents data on gross national product (GNP), national and personal income, and investment, money income, poverty, and national and personal wealth. The data on and expenditure measure two aspects of the U.S. economy. One aspect relates to the nacrome and product accounts (NIPA), a summation reflecting the entire complex of the Naconomic income and output and the interaction of its major components; the other relates to ribution of money income to families and individuals, or consumer income.

primary source for data on GNP, national and personal income, and gross saving and investthe Survey of Current Business, published monthly, with supplements, by the Department of
irce, Bureau of Economic Analysis (BEA). A comprehensive revision to the NIPA was comin December 1985. A discussion of the revision appears in the December 1985 Survey of
'Business. Detailed historical data appear in The National Income and Product Accounts of
ited States, 1929-82, Statistical Tables and the July 1986 issue of the Survey of Current
is; detailed data for the most recent years are normally published each July in the Survey.
ces of income distribution data are the decennial censuses of population and the Current
ion Survey (CPS), both products of the Bureau of the Census (see text, section 1. Annual
i income of families, individuals, and households, by income class, are presented in Current
ion Reports—Consumer Income, series P-80.

on individuals' saving and assets are published by the Board of Governors of the Federal e System in the quarterly *Flow of Funds Accounts*; and detailed information on personal is published periodically by the Internal Revenue Service (IRS) in *SOI Bulletin*.

Interview and product.—Gross national product (GNP) is the total national output of and services valued at market prices. GNP can be viewed in terms of expenditure categories comprise purchases of goods and services by consumers and government, gross private do-investment, and net exports of goods and services. The goods and services included are those bought for final use (excluding illegal transactions) in the market economy. A number resions, however, represent imputed values, the most important of which is rental value of occupied housing. GNP, in this broad context, measures the output attributable to the factors uction—labor and property—supplied by U.S. residents. GNP differs from "national income" in that GNP includes allowances for depreciation and for indirect business taxes (sales and y taxes); see table 672.

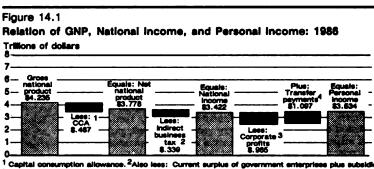

nal income is the aggregate of labor and property earnings which arises in the current proof goods and services. It is the sum of employee compensation, proprietors' income, rental , corporate profits, and net interest. It measures the total factor costs of the goods and servoduced by the economy. Income is measured before deduction of taxes on income.

tal consumption adjustment for corporations, nonfarm sole proprietorships and partnerships lifference between capital consumption claimed on income tax returns and capital consumptions that are measured at straightline depreciation, consistent service lives, and replace-ost. The tax return data are valued at historical costs and reflect changes over time in servand depreciation patterns as permitted by tax regulations. Inventory valuation adjustment into the difference between the book value of inventories used up in production and the cost using them.

pnal income is the current income received by persons from all sources minus their personal utions for social insurance. Classified as "persons" are individuals (including owners of uninted firms), nonprofit institutions serving individuals, private trust funds, and private noninvelfare funds. Personal income includes transfers (payments not resulting from current projetom government and business such as Social Security benefits, public assistance, etc., studes transfers among persons. Also included are certain nonmonetary types of incomeestimated net rental value to owner-occupants of their homes and the value of services

furnished without payment by financial intermediaries and food and fuel produced and consumed on farms.

Disposable personal income is personal income less personal tax and nontax payments. It is the income available to persons for spending and saving. Personal tax and nontax payments are tax payments (net of refunds) by persons (except personal contributions for social insurance) that are not chargeable to business expense, and certain personal payments to general government that are treated like taxes. Personal taxes include income, estate and gift, and personal property taxes and motor vehicle licenses. Nontax payments include passport fees, fines and penalties, donations, and tuitions and fees paid to schools and hospitals operated mainly by government.

- is not interest and contributions for social insurance.

4 Also-plus personal interest and personal dividend incom

Consumer Expenditure Survey.—The Consumer Expenditure Survey program was begun in late 1979. The principal objective of the survey is to collect current consumer expenditure data which provide a continuous flow of data on the buying habits of American consumers. The data are necessary for future revisions of the Consumer Price Index.

The survey conducted by the Bureau of the Census for the Bureau of Labor Statistics, consists of two components: (1) An interview panel survey in which the expenditures of consumer units are obtained in five interviews conducted every 3 months; and (2) a diary or recordkeeping survey completed by participating households for two consective 1-week periods.

Each component of the survey queries an independent sample of consumer units representative of the U.S. urban population. Over 52 weeks of the year, 5,000 consumer units are sampled for the diary survey. Each consumer unit keeps a diary for two 1-week periods yielding approximately 10,000 diaries a year. The interview sample is selected on a rotating panel basis, targeted at 5,000 consumer units per quarter. Data are collected in 85 urban areas of the country that are representative of the U.S. urban population. The survey includes students in student housing.

The Diary survey is designed to obtain expenditures on small, frequently purchased items which are normally difficult for respondents to recall. Detailed records of expenses are kept for food and beverages, both at home and in eating places, tobacco, housekeeping supplies, nonprescription drugs, and personal care products and services.

The Interview survey is designed to obtain data on the types of expenditures which respondents can be expected to recall for a period of 3 months or longer. In general, these include relatively large expenditures, such as those for property, automobiles, and major appliances, or expenditures which occur on a fairly regular basis, such as rent, utilities, or insurance premiums. Including 'global estimates" for food, it is estimated that about 95 percent of expenditures are covered in the interview. Excluded are nonprescription drugs, household supplies, and personal care items. The interview survey also provides data on expenditures incurred while on trips. Both surveys exclude all business related expenditures for which the family is reimbursed.

Distribution of money income to families and individuals.—Money income statistics are based on data collected in various field surveys of income conducted since 1936. Since 1947, the Bureau of the Census has collected the data on an annual basis and published them in Current Population Reports, series P-80. In each of the surveys, enumerators interview representative samples of the population with respect to income received during the previous year. Money income as defined by the Bureau of the Census differs from the BEA concept of "personal income."

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of non-cash benefits (see section 12) such as food stamps, health benefits, and subsidized housing; that some families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. For data on noncash benefits, see section 12. None of the aggregate income concepts (GNP, national income, or personal income) is exactly comparable with money income, although personal income is the closest.

Several changes were made in the collection and presentation of data from the March 1980 CPS. The changes include (1) the use of a more detailed income questionnaire for all sample households, (2) the use of an expanded sample, (3) the implementation of the "householder" concept rather than the traditional "head" concept, (4) the exclusion of a small number of "secondary families" from the count of all families, (5) the use of more detailed income intervals in the upper range of the income distribution, (6) the introduction of the new farm definition, and (7) the restriction of the population with income to persons 15 years old and over. For more information on the impact and comparability, see the source.

Beginning in the March 1981 Current Population Survey, 1980 census population controls were used; for income years 1971 through 1979, 1970 census population controls had been used. This change had little impact on income summary measures (means and medians) and proportional measures (percent distributions and poverty rates); however, use of the controls may have significant impact on the absolute numbers.

Income and poverty data for 1986 are the first estimates based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence categories such as metropolitan, nonmetropolitan, farm, and nonfarm reflect metropolitan areas defined as of June 1984. In addition, the March 1987 CPS income supplement was revised to allow for the coding of larger earnings amounts on the questionnaire. A description of this change and its effect on estimates in this report can be found in *Current Population Reports*, series P-60, No. 157.

In October 1983, the Census Bureau began to collect data under the new Survey of Income and Program Participation (SIPP). The information supplied by this survey is expected to provide better measures of the status and changes in income distribution and poverty of households and persons in the United States. The data collected in SIPP will be used to study Federal and State aid programs (such as food stamps, welfare, Medicaid, and subsidized housing), to estimate program costs and coverage, and to assess the effects of proposed changes in program eligibility rules or benefit levels. The core questions are repeated at each interview and cover labor force activity, the types and amounts of income received, and participation status in various programs. The core also contains questions covering attendance in postsecondary schools and private health insurance coverage. Various supplements or topical modules covering areas such as educational attainment, assets and liabilities, and pension plan coverage are penodically included.

Poverty.—Families and unrelated individuals are classified as being above or below the poverty level using the poverty index originated at the Social Security Administration in 1964 and revised by Federal Interagency Committees in 1969 and 1980. The poverty index is based solely on money income and does not reflect the fact that many low-income persons receive noncash benefits such as food stamps, medicaid, and public housing. The index is based on the Department of Agriculture's 1961 economy food plan and reflects the different consumption requirements of families based on their size and composition. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index. The following technical changes to the thresholds were made in 1981: (1) distinctions based on sex of householder have been eliminated; (2) separate thresholds for farm families have been dropped; and (3) the matrix has been expanded to families of nine or more persons from the old cutoff of seven or more persons. These changes have been incorporated in the calculation of poverty data beginning with 1981. The table on page 416 shows the average thresholds used for selected years between 1970 and 1986. See *Current Population Reports*, series P-60. Nos. 138, 149, 152, and 157 for more details.

NA Not available. 1 Poverty levels for nonfarm families.

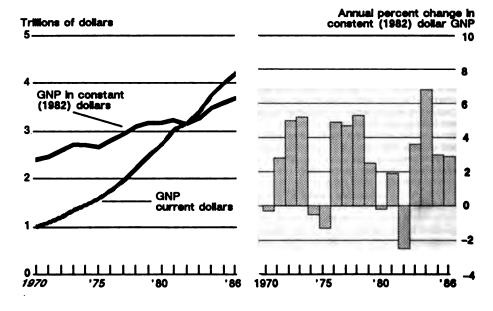

Personal wealth.—Personal wealth estimates, issued by the IRS, are based on a sample of Federal estate tax returns which must be filed for deceased persons. Estimates are weighted to adjust for age, sex, and "social class" (as determined by IRS through insurance holdings). Gross estate is the gross value of all assets, including the full face value of life insurance (reduced by policy loans), before reduction by the amount of debts. The level of gross estate or gross assets required for filling estate tax returns increased from \$60,000 which defined top wealthholders in 1972, to \$120,000 for 1976. Net worth is one's level of worth after all debts have been removed.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability pertaining to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States. Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Appendix V.

### No. 681. Personal Income in Current and Constant (1962) Dollars-States: 1970 to 1986

[1986 preliminary. Represents a measure of income received from all sources during the calendar year by the residents of each State. Data exclude Federal employees overseas and, for 1980, U.S. residents employed by private U.S. firms on temporary foreign assignment. Totals may differ from those in tables 672, 673, and 678. See text, section 14. For composition of regions, see fig. 1, inside front cover]

#### No. 696. HOUSEHOLDS WITH DISCRETIONARY INCOME—SELECTED INCOME MEASURES IN CONSTANT (1984) DOLLARS: 1982

[Households as of March 1983 and income figures are for the preceding year, expressed in 1984 dollars. Discretionary income is the amount of money which would permit a household to maintain a living standard comfortably higher (30% or more) than the average for similar households. For methodology, see source)

## NO. 712. PERSONS, FAMILIES, AND CHILDREN BELOW POVERTY LEVEL—NUMBER AND PERCENT, BY STATE: 1979

[Persons, families, and related children as of April of the following year. For explanation of poverty level, see text, section 14. Excludes unrelated individuals under 15 years of age, and persons in specified types of group quarters, i.e. immates of institutions and persons living in military group quarters or in college dormitories. Poverty criteria computed on a national basis only and not adjusted for regional, State, or other local variations in cost of living. For details, see source]

## NO. 720. PERSONS BELOW POVERTY LEVEL AND POVERTY RATE, BY VALUATION TECHNIQUE AND TYPE OF NONCASH BENEFIT INCLUDED: 1980 TO 1986

[Persons as of literoh of the following year. Valuation techniques that are used to measure noncesh benefits are as follows: (1) Market value approach which is equal to the purchase price in the private market of the goods received by the recipient; and (2) recipient and/or cash equivelent approach which is the amount of cash that would make the recipient just as well off as the in-tend transfer or would reflect the recipient's own valuation of the benefit. For more information on the methodology, see source]

#### Section 15

#### **Prices**

This section presents indexes of producer and consumer prices, actual prices for selected commodities and energy prices. The primary sources of these data are monthly publications of the Department of Labor, Bureau of Labor Statistics (BLS), which include: Monthly Labor Review; Consumer Price Index, Detailed Report; Consumer Prices: Energy and Food; and Producer Price Indexes. The Bureau of Economic Analysis of the Department of Commerce is the source for the gross national product implicit price deflators; see table 732. The Department of Agriculture's Economic Research Service (ERS) produces indexes of prices received and prices paid by farmers; see section 23.

The Bureau of Labor Statistics (BLS) prepares monthly indexes of producer prices for a large selection of commodities, and monthly indexes of consumer prices for both commodities and services.

**Producer price Index.**—This index, dating from 1890, is the oldest continuous statistical series published by BLS. It is designed to measure average changes in prices received by producers of all commodities, at all stages of processing, produced in the U.S.

The index has undergone several revisions (see *Monthly Labor Review*, February 1962 and April 1978). It is now based on approximately 3,400 commodity price series instead of the approximately 3,200 included in the 1947-1960 period and the 900 included for the period prior to 1947. Indexes for the net output of mining and manufacturing industries have been added in recent years. Prices used in constructing the index are collected from sellers, and generally apply to the first significant large-volume commercial transaction for each commodity—i.e., the manufacturer's or other producer's selling price or the selling price on an organized exchange or at a central market.

The weights used in the index represent the total net selling value of commodities produced or processed in this country. Values are f.o.b. production point and are exclusive of excise taxes. Beginning in January 1967, the weights are values of net shipments of commodities as derived from the industrial censuses of 1982 and other data. For January 1976-December 1986, weights were based on 1972 shipment values.

Consumer price Indexes (CPI).—The CPI is a measure of the average change in prices over time in a fixed "market basket" of goods and services purchased either by urban wage earners and clerical workers or by all urban consumers.

In 1919, BLS began to publish complete indexes at semiannual intervals, using a weighting structure based on data collected in the expenditure survey of wage-earner and clerical-worker families in 1917-19 (BLS Bulletin 357, 1924). The first major revision of the CPI occurred in 1940, with subsequent revisions in 1953, 1964, 1978, and 1987.

The current revision, initially issued with release of the January 1987 data, is based on updated "market baskets" of goods and services and revised expenditure weights derived from a 1982-1984 Consumer Expenditure Survey.

Effective with the January 1978 index, BLS began publishing CPI's for two population groups: (1) a new CPI for All Urban Consumers (CPI-U); and (2) a revised CPI for Urban Wage Earners and Clerical Workers (CPI-W) which represents about half the population covered by CPI-U. The CPI-U includes in addition to wage earners and clerical workers, groups which historically have been excluded from CPI coverage, such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force. Separate, although overlapping samples were used for the two indexes from January 1978 to January 1982. Thereafter, the same samples were used for both indexes.

In January 1983, the method of measuring homeownership costs in the CPI-U was changed to a rental equivalence approach. This treatment calculates homeowner costs of the shelter based on the implicit rent owners would pay to rent the homes they own. The rental equivalence approach was introduced into the CPI-W in January 1985.

Beginning with release of the CPI for January 1987, revised versions of the CPI-U and CPI-W were introduced. The current CPI is based on prices of food, clothing, shefter, fuels, transportation fares, charges for doctors' and dentists' services, drugs, etc. purchased for day-to-day living. Prices are collected in 91 areas across the country from over 60,000 housing units and 21,000 establishments. Area selection was based on the 1980 census. All taxes directly associated with the purchase and use of items are included in the index. Prices of food, fuels, and a few other items are obtained every month in all 91 locations. Prices of most other commodities and services are collected monthly in the five largest geographic areas and every other month in other areas.

In calculating the index, each item is assigned a weight to account for its relative importance in consumers' budgets. Price changes for the various items in each location are then averaged. Local data are then combined to obtain a U.S. city average. Separate indexes are also published for regions, area size- classes, cross-classification of region and size-classes, and for 27 local areas, usually consisting of the Metropolitan Statistical Area (MSA); see Appendix II. Area definitions are those established by the Office of Management and Budget in 1983. Definitions do not include revisions made since 1983. Area indexes do not measure differences in the level of prices among cities, they only measure the average change in prices for each area since the base period. For further detail regarding the CPI, see the BLS Handbook of Methods, vol. II, the Consumer Price Index, and Report 736, the CPI: 1987 Revision.

Other price Indexes.—The fixed-weighted price index is a weighted average of the detailed price indexes used in the deflation of goods and services that make up the GNP. These price indexes are combined using weights that reflect the composition of GNP in 1982. Because the same weights are used for each period, changes in this index measure changes in prices over any period. The chain price index is an alternative measure of price change. It is a weighted average of the same detailed price indexes, but they are combined using weights that reflect the composition of GNP in the first of two consecutive periods. Thus, changes in this index measure changes in prices only between the consecutive periods.

The implicit price deflator is a by-product of the deflation of GNP. It is derived as the ratio of current- to constant-dollar GNP (multiplied by 100). It is a weighted average of the detailed price indexes used in the deflation of GNP, but they are combined using weights that reflect the composition of GNP in each period. Thus, changes in the implicit price deflator reflect not only changes in prices but also changes in the composition of GNP.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability pertaining to the producer price index and the CPI, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1988*. For cross-references, see Appendix V.

#### No. 729. Purchasing Power of the Dollar: 1940 to 1986

[1987=\$1.00. Producer prices prior to 1961, and consumer prices prior to 1964, exclude Alaeka and Hewell. For 1940 and 1945 producer prices based on all commodities index; subsequent years based on finished goods index. Obtained by dividing the average price index for the 1967 base period (100.0) by the price index for a given period and expressing the result in dollar and cents. Annual figures are based on average of morthly data)

#### No. 738. Consumer PRICE INDEXES, BY MAJOR GROUPS: 1950 TO 1986

[1967 – 190. Annual averages of monthly figures, except as indicated. Prior to 1965, excludes Alaska and Hewali. Through 1977 represents buying patterns of wage earners and clerical workers, beginning 1978, reflects buying patterns of all urban consumers in the 1970's. See text, section 15 for details regarding other periods. See also Historical Statistics, Colonial Times to 1970, series E 135-173]

NA Not available. Dec. 1982 = 100. See text, section 15. \*Includes housekeeping supplies and services. Except footwear. \*Includes personal care appliances.

Bource: U.S. Bureau of Labor Statistics, Monthly Labor Review and CPI Detailed Report, January issues.

#### No. 741. Consumer Price Indexes-Selected Cities or SMSA's: 1970 to 1986

[1967 = 100, except as noted. Annual averages of monthly figures. For coverage details, see headnote, table 736, and text, section 15. Area is generally the standard metropolitan statistical area (SMSA), exclusive of terms. Los Angeles-Long Beach, Anshelm, CA is a combination of two SMSA's, and New York, NY-Northeastern NJ, and Chicago, IL-Northeastern IN are the more extensive standard consolidated areas. Area definitions are those established by the Office of Management and Budget in 1973, except for Deriver-Boulder, CO which does not include Douglas County. Definitions do not include revisions made since 1973]

# No. 744. Average Prices (Unit Values)—Selected Commodifies Exported and Imported: 1970 to 1986

[In dellars per unit, includes trade of Puerto Rico with foreign countries. Unit values obtained by dividing annual values of domestic exports and imports of merchandles for consumption by annual quantities. Values of goods exported represent those at port of export. For 1970, values of goods imported represent market values in country from which imported; transaction values f.a.s. (free alongaide ship) at port of export through 1981; and customs value beginning in 1982. Unit values may show actual price movements only roughly for commodities subject to considerable price variations among different grades, methods of peoting, etc., and to year-to-year variations in proportions of grades, etc. Unit values of agricultural exports also include effects of Commodity Credit Corporation sales for export]

#### No. 745. IMPORT PRICE INDEXES—SELECTED COMMODITIES: 1980 TO 1987

(Index values are given for the June quarter of each year, indexes are weighted by the 1950 Tartif Schedule of the United States Annotated, a scheme for describing and reporting product composition and value of U.S. imports. Import prices are based on U.S. dollar prices paid by importer, F.o.b. —Free on board; c.i.f.—Cost, insurance, and freight]

#### No. 746, EXPORT PRICE INDEXES—SELECTED COMMODITIES: 1960 TO 1967

(Index values are given for June quarter of each year, indexes are weighted by 1980 export values according to the Schedule 8 classification system of the U.S. Bureau of the Consus. Prices used in these indexes were collected from a sample of U.S. manufacturers of exports and are fu.b. (free on board) factory transaction prices, except as noted]

<sup>199.5</sup> percent primary aluminum ingot. 2 Average value at point of production; includes Alaska. Source: U.S. Energy Information Administration, Armual Energy Review and Monthly Energy Review. 3 includes subbituminous coal and lignitie.

4 Weighted average based on the market price quoted by a major U.S. cobater, otherwise based on range of prices.

8 Represents low price to year. Price ranged from low 8.40 lb. to 20.00 per lb. 4 Average value of marketed production. 7 1973—1979, peak price quoted U.S. buyers by International Nicket Co., Inc., for electrolytic nickel, includes U.S. duty I.o.b. Port Colborne, Ontario; thereafter, from New York dealer. Producer prices. 4 Average value of simpments. 10 Delivered

#### No. 749. FOOD PRICES—FARM VALUE AND RETAIL PRICE FOR SELECTED ITEMS: 1975 TO 1986

[tin dollars per retail unit Indicated. The farm value is the payment to farmers for the quantity of farm products equivalent to the unit sold at retail minus imputed value of byproducts. Because of losses from processing, waste, and spoilage, the farm value represents larger quantities than the retail unit.

Section 16

# Banking, Finance and Insurance

This section presents data on the Nation's finances, various types of financial institutions, money and credit, securities, and insurance. The primary sources of these data are publications of several departments of the Federal Government, especially the Treasury Department, and independent agencies such as the Federal Deposit Insurance Corporation, the Federal Reserve System, and the Securities and Exchange Commission. National data on insurance are available primarily from private organizations, such as the American Council of Life Insurance.

Flow of funds.—The flow of funds accounts of the Federal Reserve System (see tables 765 to 769) bring together statistics on all of the major forms of financial transactions and financial claims to present an economy-wide view of asset and liability relationships. In flow form, the accounts relate borrowing and lending to one another and to the nonfinancial activities that generate income and production. Each claim outstanding is included simultaneously as an asset of the lender and as a liability of the debtor. The accounts also indicate the balance between asset totals and liability totals over the economy as a whole. Several publications of the Board of Governors of the Federal Reserve Bulletin, Flow of Funds Accounts (quarterly), and Annual Statistical Digest; and concepts and organization of the accounts, in Introduction to Flow of Funds (June 1980).

Banking system.—Banks in this country are organized under the laws of both the States and the Federal Government and are regulated by several bank supervisory agencies. State- chartered banks are supervised by officials of the respective States. National banks are supervised by the Comptroller of the Currency. Reports of Condition have been collected from national banks since 1863. Summaries of these reports are published in the Comptroller's Annual Report, which also presents data on the structure of the national banking system.

The Federal Reserve System was established in 1913 to exercise central banking functions, some of which are shared with the U.S. Treasury. It includes national banks and such State banks as voluntarily join the System. Statements of State bank members are consolidated by the Board of Governors of the Federal Reserve System with data for national banks collected by the Comptroller of the Currency into totals for all member banks of the System. Balance sheet data for member banks and other commercial banks are published quarterly in the Federal Reserve Bulletin.

The Federal Deposit Insurance Corporation (FDIC), established in 1933, insures each depositor up to \$100,000 currently in banks that are members of the Federal Reserve System and in such nonmember banks as join the insurance fund. Major item balance sheets for all commercial banks are published monthly in the Federal Reserve Bulletin.

Savings institutions and other credit agencies.—Savings institutions, insurance companies, finance companies dealing primarily in installment sales financing, credit unions, and personal loan companies represent important sources of funds for the credit market. Savings institutions are primarily involved in credit extension in the form of mortgage loans. Statistics on savings institutions are collected by the Federal Home Loan Bank Board. Statistics on loans, investments, cash, etc., of life insurance companies are published principally by the American Council of Life Insurance in the Life Insurance Fact Book. Consumer credit data are published currently in the Federal Reserve Bulletin.

Federally chartered credit unions are under the supervision of the National Credit Union Administration, established in 1970. State-chartered credit unions are supervised by the respective State supervisory authorities. The Administration publishes comprehensive program and statistical information on all Federal and federally insured State credit unions in the Annual Report of the National Credit Union Administration. Deposit insurance (up to \$100,000 per account) is provided to members of all Federal and those State credit unions that are federally-insured by the National Credit Union Share Insurance Fund which was established in 1970. Deposit insurance for State chartered

credit unions is also available in some States under private or State- administered insurance programs.

Government corporations and credit agencies make available credit of specified types or to specified groups of private borrowers, either by lending directly or by insuring or guaranteeing loans made by private lending institutions. Data on operations of Government credit agencies, along with other Government corporations, are available in reports of individual agencies; data on their debt outstanding are published in the Federal Reserve Bulletin.

Currency.—Currency, including coin and paper money, represents more than one-fourth of all media of exchange in the United States, with most payments made by check. All currency is now issued by the Federal Reserve Banks.

Securities.—The Securities and Exchange Commission (SEC) was established in 1934 to protect the interests of the public and investors against malpractices in the securities and financial markets and to provide the fullest possible disclosure of information regarding securities to the investing public.

Insurance.—Insuring companies, which are regulated by the various States or the District of Columbia, are classified as either life or property. Companies that underwrite accident and health insurance only and these that underwrite accident and health insurance in addition to one or more property lines are included with property insurance. Insuring companies, other than those classified as life, are permitted to underwrite one or more property lines provided they are so licensed and have the necessary capital or surplus.

There are a number of published sources for statistics on the various classes of insurance—life, health, fire, marine, and casualty. Individual States collect data on all insurers operating within their respective jurisdictions, and many of the States publish an annual insurance report giving individual company data and aggregates of certain items for the companies operating within the State. Organizations representing certain classes of insurers publish reports for these classes. Among them are the annual commercial publishers, such as The National Underwriter Company whose Argus Health Chart (annual) contains financial and operating data for individual health and accident insurance companies, including Blue Cross and Blue Shield Plans. The American Council of Life Insurance publishes statistics on life insurance purchases, ownership, benefit payments, and assets in its annual Life Insurance Fact Book.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

### No. 782, 500 LARGEST BANKS IN THE WORLD—NUMBER AND DEPOSITS, BY LOCATION OF BANK: 1970 TO 1986

[Deposite in billions of dollars, except percent. Data cover U.S. commercial banks and foreign banks that conduct a commercial banking business; beginning 1983, includes U.S. and foreign savings banks. Beginning 1981, covers top 500 banks in assets available. Number of banks includes banks more than 50 percent owned by other banks. To avoid doubte-counting of deposits, banks more than 50 percent owned by other banks are excluded from deposit totals if their parent bank consolidates their deposits]

### No. 784. Foreign Lending by Large U.S. Banks, by Maturity, Type of Borrower, and Country: 1986

[Im millions of dollars, except percent. As of December, Covers 195 U.S. banking organizations which do nearly all of the foreign lending in the country. Data represent claims on foreign residents and institutions held at all domestic and foreign offices of covered banks. Data cover only cross-border and non-local currency lending. These test from a U.S. bank's office in one country lending to residents of another country or lending in a currency other than that of the borrower's country. Excludes local currency loans and other claims and local currency leabilists held by banks' foreign offices or needents of the country in which the office was located (e.g. Deutsche mark loans to German residents booked at the German branch of the reporting U.S. bank)]

NA Not available. 

Based on daily offering rates of dealers. 

Yields are quoted on a bank-discount basis, rather than an investment yield basis (which would give a higher figure). 

Placed directly; averages of daily offering rates of dealers. 
Beaed on the most representative daily offering rates of dealers. Beginning Aug. 15, 1974, closing rates were used, and from Jan. 1, 1961, rates of top-rated banks only. 
Federal Reserve Bank of New York, low and high. The discount rates for 1960 and 1961 do not include the surcharge applied to frequent borrowings by large institutions. The surcharge reached 3 percent in 1965 and 4 percent in 1961. Surcharge was eliminated in Nov. 1961. 

Averages based on daily closing bid yields in secondary market, bank discount basis. 

Averages based on quotations for one day each month. Source:

Salomon Brothers, Inc., New York, NY, An Analytical Record of Yields and Yield Spreads. 

PHUD—Housing and Urban Development. 

Averages based on quotations for 1 day each month as compiled by FHA.

Figure 17.2 index of Net Business Formations and Business Failure Rates: 1970 to 1986

### Section 17

### **Business Enterprise**

This section relates to the place and behavior of the business firm, and to business initiative in the American economy. It includes data on the number, type, and size of businesses; financial data of domestic and multinational U.S. corporations and their foreign affiliates; business investment, expenditures, and profits; business sales and inventories; consumer cooperatives; and business fall-ures. Additional business data may be found in other sections, particularly 27 and 28.

The principal sources of these data are the Survey of Current Business, published by the Bureau of Economic Analysis (BEA); the Federal Reserve Bulletin, issued by the Board of Governors of the Federal Reserve System; the annual Statistics of Income reports of the Internal Revenue Service (IRS); The Failure Record Through 1986, issued by the Dun & Bradstreet Corporation, New York; and The Fortune Directory, issued by Time, Inc., New York. Other sources are publications of the Securities and Exchange Commission (SEC), the Bureau of the Census, and the Administrative Office of the United States Courts.

Business firms.—A firm is generally defined as a business organization under a single management and may include one or more establishments (i.e., a single physical location at which business is conducted). The terms firm, business, company, and enterprise are used interchangeably throughout this section. A firm doing business in more than one industry is classified by industry according to the major activity of the firm as a whole. The industrial classification is based on the Standard Industrial Classification (SIC) Manual (see text, section 13).

The IRS concept of a business firm relates primarily to the legal entity used for tax reporting purposes. The IRS Statistics of Income reports present data, based on a sample of tax returns before audit, separately for sole proprietorships, partnerships, and active corporations. A sole proprietorship is an unincorporated business owned by one person including large enterprises with many employees and hired managers to the part-time operations in which the owner is the only person involved. A partnership is an unincorporated business owned by two or more persons, each of whom has a financial interest in the business. The "persons" could be individuals, estates, trusts, other partnerships or corporations. A corporation is a business that is legally incorporated under State laws. The IRS recognizes many types of businesses as corporations, including joint-stock companies; mutual and other insurance companies; and unincorporated associations such as business trusts, etc. While many corporations file consolidated tax returns, most corporate tax returns represent individual corporations, some of which are affiliated through common ownership or control with other corporations filing separate returns.

Assets and Ilabilities.—In its annual report, Statistics of Income, Corporation Income Tax Returns, the IRS presents balance sheet and income estimates for all active U.S. corporations. The Bureau of the Census issues the Quarterly Financial Report for Manufacturing, Mining and Trade Corporations (QFR), which presents quarterly income account and balance sheet data for manufacturing, mining, and trade industries. The Federal Reserve Board issues Working Capital of U.S. Nonfinancial Corporations, which presents data on components of current assets and liabilities of all nonfinancial U.S. corporations. Both of these reports were prepared by the Federal Trade Commission until responsibilities for QFR were transferred to Census beginning with the 4th quarter 1982 report.

One of the most comprehensive measures of the investment position of the business sector (and the only measure adjusted to current replacement cost) is the BEA capital stock series. See *Survey of Current Business*, August 1987.

Income, profits, dividends, and taxes.—Several agencies, among them IRS and BEA, compile corporate income account data. These data, however, are not comparable because of differing methods of compilation. A reconciliation of the two can be found in table 8.13 of National Income and Product Accounts of the United States, 1929-82, and Survey of Current Business (normally the July issue), published by BEA. The IRS publishes financial data for all business enterprises. These data appear in Statistics of Income—Corporation Income Tax Returns and the Statistics of Income

Bulletin Partnership and Sole Proprietorships Returns. Supplemental reports published periodically present data on international income and taxes reported by U.S. corporations.

Corporate data issued by BEA are a part of its national income and product accounts (see text, section 14). The primary sources for BEA estimates of profits, taxes, dividends, and undistributed profits are the original corporate tax returns submitted to IRS. Various adjustments of IRS data are required by the national income treatment—particularly with respect to profits which would be disclosed if all tax returns were audited; depletion; capital gain or loss; treatment of bad debts; measurement of income received from abroad; and intercorporate dividends—to make the figures comparable with other entries in the national income accounts. For a discussion of two types of adjustments (inventory valuation and capital consumption), see text, section 14. The BEA's corporate profits data also include net earnings of Federal Reserve banks, credit unions, private noninsured pension funds, and several quasi-government credit agencies not included in IRS data.

Sources and uses of corporate funds.—These data (table 861) show capital requirements of corporations and the manner in which they are financed. Sources of funds should be equal to their uses. Certain discrepancies, however, interfere with this equality due to omission of (1) money accruing to corporations from an excess of sales over purchases of used plant and equipment, (2) transactions in securities held as permanent investments except public offerings, and (3) net purchases of land. Also, the balance sheet data upon which many of the financial flow estimates are based are not fully comparable with the tax-return based estimates of internal sources, or the establishment series underlying the figures on inventory change.

Plant and equipment expenditures.—Estimates of actual and planned expenditures for new plant and equipment in the United States by most private nonagricultural business firms are based on quarterly sample surveys conducted by the Bureau of Economic Analysis.

For quarterly data, see current issues of the Survey of Current Business. For a discussion of coverage, concepts, and methodology, see the February 1985 issue of the Survey.

Sales and inventories.—Sales are estimated aggregate values, and inventories are book values at the end of the period. Sales signifies sales or shipments for retail and wholesale trade and billings or shipments for manufacturing. Trade inventories are valued at cost of merchandles on hand, while manufacturers' inventories are valued at approximate current costs or at book values, as reported by the manufacturer. Inventories (see table 857) are based on data from censues (conducted every five years, for years ending in "2" and "7") and annual surveys. Monthly data for manufacturing appear in the Bureau of the Census Current industrial Reports, Manufacturers' Shipments, Inventories, and Orders, series M3-1; for data on retail and wholesale trade, see section 28.

Sales, assets, net income, stockholder's equity, and total returns to investors.—Sales include service and rental revenues but exclude dividends, interest, and other non-operating revenues. All companies on the list must have derived more than 50 percent of their sales from manuacturing and/or mining, Sales of subsidiaries are included when they are consolidated. Assets are these shown at the company's year-end. Net income is shown after taxes and after extraordinary credits or charges when any are shown on the income statement. Stockholder's equity is the sum of capital stock, surplus and retained earnings at the company's year-end. Redeemable preferred stock is excluded when its redemption is either mandatory or outside the control of the company, except in the case of cooperatives. Total returns to investors include both price appreciation and dividend yield. Returns are adjusted for stock splits, stock dividends, recapitalizations, and corporate reorganizations as they occur. For further discussion, see Time, Inc., New York, NY, The Fortune Directory, May and June issues.

Economic censuses.—The economic censuses constitute comprehensive and periodic canvasses of the Nation's industrial and business activities. The first economic census of the United States was conducted as part of the 1810 decennial census, when inquiries on manufacturing were included with the census of population. Minerals data were collected in 1840. The first censuses of construction and business were taken for 1929. An integrated economic census program was begun for 1954. In that year, the censuses covered the retail and wholesale trades, selected service industries, manufactures, and mineral industries. The economic censuses are taken at 5-year intervals covering years ending in "2" and "7".

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1996*. For cross-references, see Appendix V.

NO. 823. NUMBER OF RETURNS, RECEIPTS, AND NET INCOME, BY TYPE OF BUSINESS: 1970 TO 1984

[Figures are estimates based on samples; see Appendix III. See also Historical Statistics, Colonial Times to 1970, series V 1-12.

For further information regarding corporations, see table 848]

ITEM	Unit	1970	1975	1975	1970	1983	1001	1983	1983	1984

<sup>&</sup>lt;sup>1</sup> Net income (less deficit) is defined differently by form of organization, basically as follows: (a) Proprietorships: Total taxable receipts less total deductions, including cost of sales and operations; investment and other income are excluded; (b) Partnerships: Total taxable receipts less total deductions, including cost of sales and operations; investment and other income, except capital gains, are included; (c) Corporations: Total taxable receipts less total deductions, including cost of sales and operations, investment and other income, such as capital gains and income from foreign corporations considered received for tax purposes only, are included; net income is before income tax.
<sup>2</sup> Through 1980, includes and includes only nonfarm businesses.
<sup>3</sup> Through 1980, includes and services less allowences, rebates, and returns; excludes capital gains and losses, and investment income not associated with taxyeyer's businesses.
<sup>4</sup> Gross taxable receipts from sales of noncapital assets.

Includes firms with no receipts. Business receipts. Active firms only. Number of businesses. Number of non-farm sole propristorship returns is not available prior to 1961. However, the number of returns and the number of businesses are very closely related. Since 1970, the ratio of number of returns to the number of businesses has remained approximately 1 to 1.1.

NA Not available. 

¹ Total assets, total liabilities, and partner's capital accounts are somewhat understated because not all partnership returns filed contained a complete balance sheet.

ª Represents mortgages, notes, and bonds payable in one year or more.

ª Tax year 1975 long term debt included nonrecourse loans.

Beginning 1982, includes both interest and dividends.

## No. 849. Fixed Nonresidential Private Capital Valued in Current and Constant (1982) Dollars: 1970 to 1986

[In billions of dollars. Stocks as of Dec. 31; depreciation over entire calendar year. Data refer to privately owned assets and are based on the fixed capital formation components of the gross national product. Excludes residential capital and government enterprises; includes nonprofit institutions. Gross stocks allow for retirement; as tooks allow for retirement and depreciation. Net stock and depreciation estimates are based on the straight-line depreciation formula]

#### No. 853. Business Expenditures for New Plant and Equipment: 1970 to 1987

In billions of dollars. Based on sample and subject to sampling variability; see text, section 17. Represents expenditures for new facilities and for expansion or replacement of existing facilities that are chargeable to fixed asset accounts and for which depreciation or amortization accounts are ordinarily maintained. Excludes expenditures for land and mineral rights; maintenance and repair; used plant and equipment, including that purchased or acquired through mergers or acquisitions; assets located in foreign countries; residential structures; etc. They also differ from the nonresidential fixed investment data in type of detail, data sources, coverage, and timing. For further information, see the February 1985 Survey of Current Business]

NA Not available.

\* Estimates based on planned capital expenditures as reported by business in April and May 1967.

\* Surveyed quarterly.

\* Includes construction.

\* Quarterly estimates for selected normanufacturing industries were discontinued effective with the April-May 1994 survey.

\* Annual estimates for these industries are based on capital expenditures reported by business in January through March each year.

\* "All industries" plus the part of normanufacturing that is surveyed annually.

\* Consists of real estate; professional services; membership organizations and social services; and forestry, fishery, and agricultural services.

\* Procedures for pre-

<sup>\*</sup>Procedures for preparing constant-dollar estimates are described in the February 1985 Survey of Current Business. To estimate real spending plans, BEA adjusts the survey results for assumed price changes.

#### No. 854. COMPOSITE INDEXES OF ECONOMIC CYCLICAL INDICATORS: 1977 TO 1986

16 figures are preliminary. See source for discussion of composite indexes. Minus sign (—) indicates decrease. Leading distributes are economic time series that tend to reach their cyclical high and low points earlier than the corresponding peaks and troughs in the overall economy. Colincident indicators are economic time series that tend to reach their cyclical high and w points about the same time as the corresponding peaks and troughs in the overall economy. Lagging indicators are conomic time series that tend to reach their cyclical high and low points later than the corresponding peaks and troughs in the series expected.

#### Section 18

## Communications

its section presents statistics on the usage, finances, and operations of the Postal Service and ne various communications media: Telephone, telegraph, radio, television, newspapers and perials. Expenditures data for advertising in the media are also included.

setal Service.—The Postal Service provides mail processing and delivery services within the set States. The Postal Reorganization Act of 1970 created the Postal Service, effective July 1, as an independent establishment of the Federal Executive Branch; it also placed restrictions he private delivery of mail.

Revenue and cost analysis" is the term used by the Postal Service to describe its system of buting revenues and costs to classes of mail and service. This system draws primarily upon sability sampling techniques to develop estimates of revenues, volumes, and weights, as well as a by class of mail and special service. The costs attributed to classes of mail and special servare primarily incremental costs which vary in response to changes in volume; they account for thily 60 percent of the total costs of the Postal Service. The balance represents "institutional as" which includes funds for research and development, portions of personnel and office suply, etc. Statistics on revenues, volume of mail, and distribution of expenditures are presented in Postal Service's annual report, Revenue and Cost Analysis, and its Annual Report of the Postater General.

pmmunication media.—The Federal Communications Commission (FCC), established in 1934, lates wire and radio communications and licenses radio and television stations. Only the larg-carriers and controlling companies file annual or monthly financial reports. Jurisdiction of the applies to domestic and overseas telegraph carriers and to the Communications Satellite Cortion (Comsat), but not to a large number of telephone carriers that are engaged in intrastate ics. The gross operating revenues of the telephone carriers reporting annually to the FCC, how; are estimated to cover about 90 percent of the revenues of all U.S. telephone companies, aports filed by the broadcasting industry cover substantially all radio and television stations oping in the United States and its outlying areas. Statistics covering the private radio services report the largest and most diverse group of licensess regulated by the FCC. These services prily provide two-way radio communication for emergency and business purposes in the aviation, ne, land transportation, and other industries; police, fire, and other public safety programs; and teur and personal operations. Principal sources of wire, radio, and television data are the FCC's unil Report, and its annual Statistics of Communications Common Carriers.

intistics on the printed media are available from the U.S. Bureau of the Census, as well as from sus private agencies. The censuses of manufactures (conducted by the Census Bureau every years, for the years ending in "2" and "7") provide statistics on the number and circulation of spapers and periodicals and on sales of books and pamphlets. Editor & Publisher Co., Inc., York, presents annual data on the number and circulation of daily and Sunday newspapers in new relational Year Book. Monthly data on new books and new editions appear in Publishers widy, issued by R. R. Bowker Company, New York. (See table 368 for annual data.)

tivertising.—The statistics on advertising expenditures are compiled primarily by private organiris. McCann-Erickson, Inc., which compiles certain of the data shown (see tables 896-898),
res national advertising as the advertising done for companies whose products are distributed
risally, and for which national media rates are paid. Local advertising is defined as the advertisdione for companies which market their products locally and which may pay special "local"
la rates. Spot advertising is considered time bought by a national advertiser on a selective
tet basis. Monthly index figures of advertising in certain media are also published periodically
lcCann-Erickson in Advertising Age.

we Broadcast Advertisers Reports (see tables 900-902) distinguished between spot and local artising primarily on the basis of the type of advertiser to whom the time is sold, rather than how by whom it is sold. In general, time purchased on be half of retail or service establishments in

the market is considered local, even though the establishments may be part of a national or regional chain. That is, spot advertising promotes a product, while local advertising promotes a given establishment. Network advertising, mutually exclusive of spot and local, is broadcast through the network system.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III. Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Appendix V.

No. 872, U.S. POSTAL SERVICE—SUMMARY: 1900 TO 1988

[For flecal years; see text section 9.includes Puerto Rico and all outlying areas except Canal Zone. See text section 18. See all Historical Statistics, Colonial Times to 1970, series R 163- 171]

NA Not available. <sup>1</sup> Represents the average number of production workers plus the number of other employees in mid-March. <sup>2</sup> Derived by subtracting the cost of materials, supplies, containers, fuel, purchased electricity, and contract work from the value of shipments. This result is then adjusted by the addition of value added by merchandising operations, plus the net change in finished goods and work-in-process inventories between the beginning and the and of the year.

<sup>&</sup>lt;sup>1</sup> Includes Installation revenue.

<sup>2</sup> Individual program services sold to subscrib-

532 Energy

# 72

#### Section 19

## Energy

his section presents statistics on fuel resources, energy production and consumption, electric rgy, hydroelectric power, nuclear power, solar energy, wood energy and the electric and gas ly industries. The principal sources are the U.S. Department of Energy's Energy Information Adistration (EIA), the Edison Electric Institute, Washington, DC, and the American Gas Association, ngton, VA. The Department of Energy was created in October 1977 and assumed and central the responsibilities of all or part of several agencies including the Federal Power Commission C), the U.S. Bureau of Mines, the Federal Energy Administration, and the U.S. Energy Research Development Administration. For additional data on transportation, see section 21; on fuels, section 25; and on energy-related housing characteristics, see section 26.

he EIA, in its Annual Energy Review, provides statistics and trend data on energy supply, nand, and prices. Information is included on petroleum and natural gas, coal, electricity, hydrotric power, nuclear power, and solar and geothermal energy. Among its annual reports are rual Energy Review, Electric Power Annual, Natural Gas Annual, Petroleum Supply Annual, State vrgy Data Report, Energy Price and Expenditure Report, Financial Statistics of Selected Electric ities, Historical Capital Costs and Annual Production Expenses, Residential Energy Consumption vey, Performance Profiles of Major Energy Producers, Typical Electric Bills, Annual Energy Outk, and International Energy Annual. These various publications contain State, national, and interonal data on production of electricity, net summer capability of generating plants, fuels used in rgy production, energy sales and consumption, hydroelectric power, construction costs and protion expenses of power plants, and depreciation practices. The EIA also issues the Monthly irgy Review, which presents current supply, disposition, and price data, and separate weekly I monthly publications on petroleum, coal, natural gas, and electric power. Data on residential rgy consumption, expenditures, and conservation activities are available from EIA's Residential ergy Consumption Survey and are published in Residential Energy Consumption Survey: Conaption and Expenditures, and Residential Energy Consumption Survey: Conservation, and severther reports.

The Edison Electric Institute's monthly bulletin and annual Statistical Year Book of the Electric ity Industry for the Year contain data on the distribution of electric energy by public utilities; innation on the electric power supply, expansion of electric generating facilities, and the manufactor of heavy electric power equipment is presented in the annual Year End Summary of the Electrower Situation in the United States. The American Gas Association, in its monthly and quarter-bulletins and its yearbook, Gas Facts, presents data on gas utilities, including sales, revenues, stomers, prices, and other financial and operating statistics. A wide range of petroleum statistics provided in the American Petroleum Institute publication Basic Petroleum Data Book.

Itu conversion factors.—Various energy sources are converted from original units (e.g., short s, cubic feet, barrels, kilowatthours) to the thermal equivalent using British thermal units (Btu). A is the amount of energy required to raise the temperature of 1 pound of water 1 degree Fahreit (F) at or near 39.2 degrees F. Factors are calculated annually from the latest final annual a available; some are revised as a result. The following list provides conversion factors used in 35 for production and consumption, in that order, for various fuels: Petroleum, 5.800 and 5.387. Btu per barrel; total coal, 21.874 and 21.370 mil. Btu per short ton; and natural gas (dry), 1,033 1 1,033 Btu per cubic foot. The factors for the production of nuclear power and geothermal wer were 10,809 and 21,263 Btu per kilowatthour, respectively. The fossil fuel steam-electric wer plant generation factor of 10,339 Btu per kilowatthour was used for hydroelectric power gention and for wood and waste, wind, photovoltaic, and solar thermal energy consumed at electric lites.

**fistorical statistics.**—Tabular headnotes provide cross-references, where applicable, to *Histori-*'Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs y also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Apndix V.

534 **Energy** 

#### No. 903. Total Horsepower of All Prime Movers: 1950 to 1986

n millions, except percent. As of January, except as noted. Prior to 1990, excludes Alaska and Hawali, except as noted. Priv movers are mechanical engines and turbines, and work animals, which originally convert fuels or force (as wind or falling well-into work and power. Electric motors, which obtain their power from prime movers, are excluded to avoid duplication. See all Historical Statistics, Colonial Times to 1970, series S 1-14]

Represents zero. Z Less than 500 billion or .05 percent. ¹ Sources of energy includes geothermal, wood and weste, and net interstate sales of electricity, including losses, not shown separately. ² Based on estimated resident population as of July 1. ² Includes —13.5 trillion Btu of net imports of coke not allocated by State. ⁴ Minus sign (—) indicates when amount of energy expended for pump storage hydropower exceeds amount of energy consumed.

#### No. 911. ENERGY EXPENDITURES-Source AND END-USE SECTOR, BY STATE: 1985

(In millions of dollars, except per capits and percents. End-use sector and electric utilities exclude expenditures on energy sources such as hydropower, solar, wind, and goothermal. Also excludes expenditures for reported amounts of energy consumed by the energy industry for production, transportation, and processing operations].

Represents zero.
 <sup>1</sup> Includes sources not shown separately. Total expenditures are the sum of purchases for each source (including electricity sales) less electric utility purchases of fuel.
 <sup>8</sup> Based on estimated resident population as of July 1.
 <sup>8</sup> Includes net imports of coal coke not shown separately by State.

### No. 912. RESIDENTIAL ENERGY CONSUMPTION, EXPENDITURES, AND AVERAGE PRICES, 1979 TO 1965, AND BY REGION, 1965

(For period April to March of year stated, Excludes Aleska and Hewall in 1979 and 1990. Covers occupied units only, Excludes household usage of gasoline for transportation and the use of wood or coal. Based on Residential Energy Consumption Survey, see Appendix III. For composition of regions, see fig. I, inside front cover. Btu=British thermal unit; see text, section 19]

### No. 925. Energy Producing Companies—Selected Financial and Investment Indicators, 1978 to 1985

[Based on data from major publicly-owned domestic crude oil producing companies which either had at least one percent of domestic production or reserves of oil, natural gas, coal, or uranium, or at least one percent of refining capacity or petroleum product seles. There were 26 companies during 1978 through 1982; 25 in 1983; and 22 during 1984 and 1985]

ITEM	1978	1978	1905	1931	1902	1902	1824	1905

Represents zero. Z Less than 5 million. ¹ Change from prior year shown; for 1980, change from 1985. For tension of everage annual percent change, see Guide to Tabular Presentation. ¹ Net summer capability is the steady hourly put that generating equipment is expected to supply to system load, exclusive of auxiliary power as demonstrated by test at the of summer peak demand. ² includes a reall percentage from wood and waste, geothermal, and pertoleum coke. A prime mover is the engine, turbine, water wheel, or similar machine which drives an electric generator. ² Fosell fuels only, includes wind, solar thermal, and photovoltaic, not shown separately. ¹ includes loael steam, wood, and waste. ² Each ne mover type in combination plants counted separately prior to 1975. ² includes small amounts of wood, waste, wind, ithermal, solar thermal, and photovoltaic,

iguros: 1990-1970, U.S. Federal Power Commission, Electric Power Statistics, and press releases; thereafter, U.S. Energy restion Administration, 1975-1980, Power Production, Fuel Consumption, and Installed Capacity Data—Annual, and unpubed data; thereafter, Electric Power Annual, Annual Energy Review, and unpublished data.

NO. 931. ELECTRIC UTILITY INDUSTRY-CAPABILITY, PEAK LOAD, AND CAPACITY MARGIN: 1970 TO 1986

[Excludes Alaska and Hewaii. Capability represents the maximum kilowatt output with all power sources evallable and with hydraulic equipment under actual water conditions, allowing for maintenance, emergency outages, and system operating requirements. Capacity margin is the difference between capability and peak load]

	CAP	ABILITY AT	THE TIME	OF-		INCIDENT LOAD		CAPACITY	MARGIN

NA Not available. 

1 As of yearend. 

2 Not summer capability is the peak steady hourly output that generating equipment is expected to supply to system load, exclusive of auxiliary and other powerplant, as demonstrated by test at the time of summer peak demand. 

2 Weighted average of monthly capacity factors. Monthly factors are derived by dividing actual monthly generation by the maximum possible generation for the month (nours in month times not maximum dependable capacity).

NA Not available. Includes other end uses and market sectors not shown separately.

\*\*Declines between 1984 and 1996 are primarily due to the expiration of the Federal energy tax credit and industry consolidation.

\*\*Source: U.S. Energy Information Administration, Solar Collector Manufacturing Activity, annual.

#### Section 20

### **Science**

This section presents statistics on scientific, engineering, and technological resources, with emases on patterns of research and development (R&D) funding and on scientific, engineering, and finical personnel, education, and employment. Also included are statistics on space program tays and accomplishments. Principal sources of these data are the National Science Foundation 3F) and the National Aeronautics and Space Administration (NASA).

NSF gathers data chiefly through recurring surveys. Current NSF publications containing data on ids for research and development and on scientific and engineering personnel include Science sources Studies Highlights; and annual, biennial, and special reports such as Federal Funds for search and Development; Research and Development in Industry; National Patterns of Science 1 Technology Resources; Academic Science/Engineering: R&D Funds, Scientists and Engineers, aduate Enrollment and Support; Federal Support to Universities, Colleges, and Selected Nonprofnstitutions; Characteristics of Doctoral Scientists and Engineers in the United States; U.S. Scien-'s and Engineers; Employment Attitudes of Recent Science and Engineering Graduates; Science 1 Engineering Employment; Characteristics of Experienced Scientists and Engineers; Scientists, gineers, and Technicians in Private Industry; Science and Engineering Personnel: A National erview; Science and Technology Data Book; Women and Minorities in Science and Engineering; I policy reports relating to national allocation of human resources and funds to science and techlogy. Statistical surveys in these areas pose particularly difficult problems of concept and definin and the data should, therefore, be regarded as broad estimates rather than precise quantitative tements. Detailed discussions of the scope and limitations of the data appear in the source pubitions.

The National Science Board's blennial Science Indicators publication contains data and analyses international and domestic science and technology, including measures of inputs and outputs. 

Budget of the United States Government, published by the U.S. Office of Management and dget, contains summary financial data on Federal R&D programs.

Research and development outlays.—NSF defines research as a "systematic and intensive dy directed toward a fuller knowledge of the subject studied" and development as "the system: use of scientific knowledge directed toward the production of useful materials, devices, system, methods, or processes." National coverage of R&D expenditures is developed primarily from riodic surveys in four principal economic sectors: (1) Government, made up primarily of Federal scutive agencies; (2) industry, consisting of manufacturing and nonmanufacturing firms and the lerally funded research and development centers (FFRDC's) they administer; (3) universities and leges, composed of universities, colleges, and their affiliated institutions, agricultural experiment ations, and associated schools of agriculture, and FFRDC's administered by educational institutions, and (4) other nonprofit institutions, consisting of such organizations as private philanthropic indations, nonprofit research institutes, voluntary health agencies, and FFRDC's administered by profit organizations. The R&D funds reported consist of current operating costs, including plang and administration costs, except as otherwise noted. They exclude funds for routine testing, pping and surveying, collection of general-purpose data, dissemination of scientific information, it training of scientific personnel.

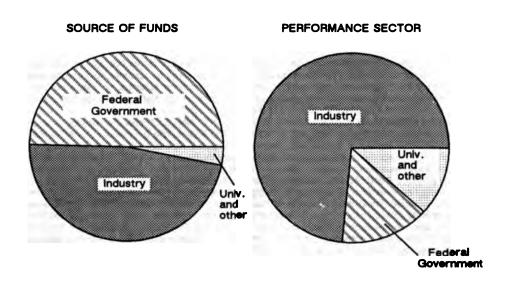

**Scientists**, engineers, and technicians.—Scientists and engineers are defined as persons enged in scientific and engineering work at a level requiring a knowledge of sciences equivalent at at to that acquired through completion of a 4-year college course. Technicians are defined as sons engaged in technical work at a level requiring knowledge acquired through a technical inute, junior college, or other type of training less extensive than 4-year college training. Craftsmen 3 skilled workers are excluded.

**fistorical statistics.**—Tabular headnotes provide cross-references, where applicable, to *Histori- Statistics of the United States, Colonial Times to 1970.* See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs by also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Apndix V. 556 Science

#### NO. 948. RESEARCH AND DEVELOPMENT (R&D)—OUTLAYS: 1955 TO 1987

basic research, applied research, and development. Defense-related outleys comprise all research and development ig by Dept. of Defense, including space activities, and a portion of Department of Energy funds. Space-related outleys are if the National Aeronautics and Space Administration; they exclude space activities of other Federal agencies, settmeted than 5 percent of all space research and development spending. Minus sign (—) indicates decrease]

### No. 950. RESEARCH AND DEVELOPMENT (R&D) FUNDS, BY PERFORMANCE SECTOR AND SOURCE: 1970 TO 1987

[In millions of dollars, except percent. Data primarily on calendar year basis—calendar year data for industry and other nonprofit institutions combined with Federal and university fiscal year data. Data refer, in general, to natural sciences including engineering, and to social sciences in all but industry sector: Excludes capital expenditures data. Expenditures at associated federally funded research and development centers administrated by industry and other nonprofit institutions included in totals of respective sectors. See also Historical Statistics, Colonial Times to 1970, series W 109-125]

Section 21

### Transportation— Land

This section presents statistics on revenues, passenger and freight traffic volume, and employment in various revenue-producing modes of the transportation industry, including motor vehicles, trains, and pipelines. Data are also presented on commuting travel; highway mileage and finances; motor vehicle travel, accidents, sales, and registrations; automobile operating costs; and characteristics of public transit, railroads, and pipelines.

The principal compiler of data on public roads and on operation of motor vehicles is the U.S. Department of Transportation's (DOT) Federal Highway Administration (FHWA). These data appear in FHWA's annual Highway Statistics. The U.S. Interstate Commerce Commission (ICC) presents data on interstate land transport in its publications, the Annual Report to Congress and the Transport Statistics in the United States, which contain data on railroads and motor carriers subject to ICC regulations.

The U.S. National Highway Traffic Safety Administration issues data on traffic accident deaths and death rates in two annual reports: the Fact Book and the Fatal Accident Reporting System Annual Report. DOT's Federal Railroad Administration presents data on accidents involving railroads in its annual Accident/Incident Bulletin, and the Rail-Highway Crossing Accident/Incident and Inventory Bulletin.

Various censuses and surveys conducted by the U.S. Bureau of the Census also provide data. Results of the censuses of transportation are presented in the *Truck Inventory and Use Survey*. The *Annual Survey of Manufactures* and reports of the censuses of manufactures, wholesale and retail trade, and service industries contain statistics on the motor vehicle and equipment industry and on retail, wholesale, and services aspects of this industry. Data on persons commuting to work were collected as part of the 1960 census and are in various census reports.

Data are also presented in many nongovernment publications. Among them are: The weekly and annual Cars of Revenue Freight Loaded and the annual Yearbook of Railroad Facts, both published by the Association of American Railroads, Washington, DC; Bus Facts, issued annually by the American Bus Association, Washington, DC, and the Transit Fact Book, containing electric railway and motorbus statistics, published annually by the American Public Transit Association, Washington, DC. Useful annual handbooks in the field of transportation are Motor Vehicle Facts and Figures and World Motor Vehicle Data, issued by the Motor Vehicle Manufacturers Association of the United States, Inc., Detroit, MI; Accident Facts, issued by the National Safety Council, Chicago, IL; and Transportation in America, issued by the Transportation Policy Associates, Washington, DC.

Urban and rural highway mileage.—Beginning 1980, mileage is classified in urban and rural categories, rather than municipal and rural. Urban denotes the Federal-aid legislation definition of an area. Such areas include, as a minimum, a census place with a population of 5,000 to 49,999 or a designated urbanized area with a population of 50,000 or more. These Federal-aid urban areas may extend beyond corporate and census boundaries, and thus are not necessarily coextensive with municipal boundaries. Rural in 1980 refers to non-Federal-aid urban area mileage. Prior to 1980, municipal referred to roads within incorporated places, densely populated New England towns, and certain of the more populous unincorporated areas and rural to non-municipal roads.

Federal-aid highway systems.—Federal law provides that Federal funds be matched in varying proportions with State funds for the costs of planning, engineering, right-of-way acquisition, and construction of highways. Other costs, such as maintenance and policing, are borne entirely by the States and local agencies.

Effective July 1, 1976, a uniform road classification system was implemented which shortened the mileage of the highway system and redefined the three main systems of Federal-aid routes. The Federal-aid primary system is comprised of a network of main roads important to interstate, statewide, and regional travel. The system consists of main rural roads and their extensions into or through urban areas. The Federal-aid secondary system consists of rural roads of a more local nature, such as those which connect county seats and the larger population centers not served by

the primary system. The Federal-aid urban system is located in urban places of 5,000 or more persons and consists of major urban roads and streets, except those on the primary system.

Regulatory bodies.—The ICC, created by the U.S. Congress to regulate transportation in interstate commerce, has jurisdiction over railroads, trucking companies, bus lines, freight forwarders, water carriers, coal slurry pipelines, and transportation brokers. The Federal Energy Regulatory Commission is responsible for setting rates and charges for transportation and sale of natural gas and for establishing rates or charges for transportation.

Motor carriers.—For 1960-1973, class I for-hire motor carriers of freight were classified by the ICC as those with \$1 million or more of gross annual operating revenue; 1974-1979, the class I minimum was \$3 million. Effective January 1, 1980 classI carriers are those with \$5 million or more in revenue. For 1960-1968, class I motor carriers of passengers were classified by the ICC as those with \$200,000 or more of gross annual operating revenue; for 1969-1976, as those with revenues of \$1 million or more; and since 1977, as those with \$3 million or more.

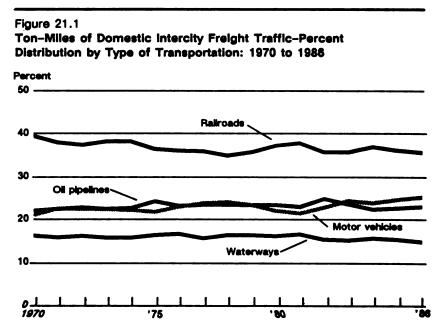

Railroads.—Railroad companies reporting to the ICC are divided into specific groups as follows: (1) Regular line-haul (interstate) railroads (and their non-operating subsidiaries); (2) switching and terminal railroads; (3) private railroads prior to 1964 (identified by ICC as "circular" because they reported on brief circulars); and (4) unofficial railroads, so designated when their reports are received too late for tabulation. For the most part, the last 3 groups are not included in the statistics shown here.

For years prior to 1978, class I railroads were those with annual revenues of \$1 million or more for 1950-1955; \$3 million or more for 1956-1984; \$5 million or more for 1965-1975; and \$10 million or more for 1976-1977. In 1978, the classification became class I, those having more than \$50 million gross annual operating revenue; class II, from \$10 million to \$50 million; and class III, less than \$10 million. Effective January 1, 1982, the ICC adopted a procedure to adjust the threshold for inflation by restating current revenues in constant 1978 dollars. In 1986, the criteria for class I and class II railroads were \$88.5 million and \$17.7 million, respectively. Also effective January 1, 1982, the ICC adopted a Carrier Classification Index Survey Form for carriers not filing annual report form R-1 with the commission. Class II and class III railroads are currently exempted from filing any financial report with the Commission. The form is used for reclassifying carriers.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

<sup>-</sup> Represents zero. NA Not available. ¹ Data on deaths are from U.S. National Highway Traffic Safety Administration and are based on 30 day definition; see table 997. Other date are from National Safety Council. ¹ Train accidents cover only those accidents which result in demages to railroad properly exceeding amounts specified by the U.S. Federal Railroad Administration. The reporting threshold were raised from \$750 to \$1,750 in 1975; to \$3,700 in 1981; to \$4,500 in 1983; and to \$4,900 in 1985. Grade crossing accidents are also included when classified as a train accident. Deaths exclude stabilities in railroad-highway grade crossing accidents. ¹ Includes acheduled and non-scheduled (charter) air centers operating under 14 CFR 121, 125, and 127. Injuries include only serious injuries. ¹ All non-scheduled service operating under 14 CFR 135. Injuries include only serious injuries. ¹ All non-scheduled service operating under 14 CFR 135. ¹ Accidents are required to be reported to the U.S. Coast Guard whenever they result in a death; a person being injured or receiving medical treatment beyond first sict, demages exceed \$200; or a person's classippearance. ¹ Pipeline accidents/incident reports were fleet. Fetallities and injuries as reported in annual report. ¹ ¹ Pipelines carrying hazardous materials, petroleum, and liquid petroleum products. ¹ Covers accidents involving commercial vessels which must be reported to U.S. Coast Guard if there is properly damage accessing \$1,500; material damage affecting the seaworthiness or efficiency of a vesset; stranding or grounding, loss of lite; or injury causing a person's incapacity for more than 3 days. ¹ Accidents, deaths, and injuries involving paradous materials cover all types of transports incapacity for more than 3 days. ¹ Accidents, deaths, and injuries involving hazardous materials cover all types of transports incapacity for more than 3 days. ¹ Accidents, deaths, and injuries involving hazardous materials cover all types of transportstion. ### No. 982. HIGHWAY MILEAGE—URBAN AND RURAL, BY TYPE OF CONTROL, AND FEDERAL-AID HIGHWAY SYSTEM: 1955 TO 1985

[In thousands, except percent. As of Dec. 31. Beginning 1980, date for urban and rural mileage are not comparable to prior years because of classification changes; see text, section 21. See also Historical Statistics, Colonial Times to 1970, series Q 50, 51, and 55]

TYPE AND CONTROL	1955	1960	1965	1970	1975	1979	1980	1981	1982	1983	1984	1985
Total mileage 1	3,418	3,546	3,690	3,730	3,838	3,918	2 3,955	3,853	3,866	3,880	3,892	3,862
Urban mileage <sup>a</sup>	373 42 331	430 50 379	506 65 442	561 74 487	639 84 555	694 86 607	624 79 543	632 90 540	641 103 536	662 100 562	674 103 571	691 111 578
Rural mileage	63.8 620	3,116 69.5 659 2,345 112	3,183 72.3 687 2,346 150	3,169 76.1 707 2,275 188	3,199 77.6 711 2,261 227	3,224 77.5 697 2,281 244	* 3,331 77.5 702 2,270 262	3,221 86.1 726 2,236 256	3,226 85.7 825 2,140 261	3,217 86.0 817 2,138 262	3,218 87.5 818 2,134 266	3,171 88.1 773 2,173 225
Federal-aid highway system: <sup>8</sup> Primary	235 (x) (x) 514	265 10 (x) 601	269 21 (x) 640	272 32 (x) 647	266 37 65 643	303 40 124 397	300 41 124 398	298 42 129 401	298 42 134 402	300 43 137 397	300 43 140 398	301 44 144 398

X Not applicable. 

1 Prior to 1980, includes public and nonpublic road mileage; beginning 1981, includes only public road mileage as defined 23 USC 402. 

2 Includes 08,000 miles of nonpublic road mileage previously contained in other rural categories.

3 Prior to 1980, represents municipal mileage; see text, section 2:

4 Covers soll-surfaced roads with slag, gravel, stone, bituminous, or concrete surfaces.

5 Incomplete reporting from Alaska, Mileaouri, and Pennsylvania for control accounts for changes between 1981 and 1982.

6 Incomplete reporting from Alaska, Mileaouri, and Pennsylvania for control mileage open to traffic rather than total highway miles carrying interstate traffic.

# 884. HIGHWAY MILEAGE—PAVEMENT CONDITION FOR URBAN AND RURAL AREAS, BY TYPE OF ROAD SYSTEM: 1978 TO 1965

y peverient condition is classified by the Present Serviceability Rating (PSR) system: which ranges from a high of 5.0 to 0.1. The reported ranges are defined as: PSR 5.0-3.5, peverients give a first class ride and exhibit few, if any, visible of surface weer. Of the quality of new or nearly new peverients. PSR 3.4-2.0, peverients have a riding quality somewhat it to that of new peverients or may even be barely tolerable at high speeds. Surfaces may show signs of cracking, and nutting. PSR 1.9-0.1, peverients show extensive wear to the point of needing resurfacing or may even complete reconstruction).

#### No. 996. DEATHS FROM MOTOR VEHICLE ACCIDENTS. BY STATE: 1970 TO 1985

[Data differ from table 997 because data are based on date of death, not date of accident. Data reflect State where death occurred. Includes deaths of nonresidents of U.S. Beginning 1990, deaths classified according to the ninth revision of the *International Classification of Diseases*, for earlier years classified according to the revision in use at the time; see text, section 2. Data based on Vital Registration System, see Appendix III. For composition of regions, see fig. 1, inside front cover]

Includes motorcycles. \*Represents speed on rural interstate highways. For 1970-1979, based on free flow speed of iddes recorded on level, straight sections of rural interstate highways during off-peak hours; beginning 1980, based on all sides on rural interstate highways. Beginning 1976, for year ending Sept. 30. \*Citations issued for 55 mph violations.

### No. 1003. Domestic Motor Fuel Consumption, by Type of Vehicle: 1970 to 1985

reprises all fuels (gas, diesel, or other fuels) used for propulsion of vehicles under State motor fuels lews. Excludes Federal unchases for military use. Minus sign (--) indicates decrease. See also *Historical Statistics, Colonial Times to 1970*, series Q 56-162]

#### No. 1011. PASSENGER TRANSIT INDUSTRY-SUMMARY: 1970 to 1985

[Includes Puerto Rico. Comprises all privately and publicly owned organized local passenger transportation agencies except taxicabs, suburban railroads, and sightseeing and school buses. Covers (a) local motorbus systems, (b) light rail systems, (c) heavy rail systems, and (d) trolley coach systems, Beginning 1984, data also include suburban railroads, urban ferry boats, automated guideways, inclined planes, cable cars, serial tramways, and rural fixed-route non-intercity motorbus systems. Also include all transit modes, and are non-continuous between 1983 and 1984. Based on financial and statistical reports received by American Public Transit Association from transit systems representing more than 85 percent of the industry. See also Historical Statistics, Colonial Times to 1970, series Q 238–250]

A Not available. ¹ See text, section 21 for definition of class 1, ² Average mid-month count. ² Represents the regate length of roadway of all line-haul railroads. Excludes yard tracks, sidings, and parallel lines. (Includes estimate for class in all railroads.) ⁴ Includes multiple main tracks, yard tracks, and sidings owned by both line-haul and switching and terminal ludes estimate for class II and III railroads.) ⁴ Excludes Long Island Railroad, which was reclassified. ⁴ Includes cars set by all railroads, private car companies, and shippers. ¹ Class I railroads only. ⁴ Includes State income taxes inning 1980. ⁴ Represents credit. ¹ Revenue and non-revenue freight. ¹¹¹ Includes highway grade crossing casual-1970 not comparable with later years due to change in requirements for reporting injuries.

xures: Association of American Railroads, Washington, DC, Yearbook of Railroad Facts, Statistics of Railroads of Class I, and Analysis of Class I Railroads, annual. Accident data: U.S. Federal Railroad Administration, Accident Bulletin, annual.

### No. 1018. Railroads, Class I-Cars of Revenue Freight Loaded, 1960 to 1986, and By COMMODITY GROUP, 1985 AND 1986

[In thousands. Figures are 52-week totals. Data for 1978-86 include 12 class II reliroads which were class I in 1977. See text, section 21, for definition of class I. N.e.c. = Not elsewhere classified]

Section 22

# Transportation— Air and Water

This section presents statistics on civil air transportation, both passenger and cargo, and on water transportation, including inland waterways, oceanborne commerce, the merchant marine, cargo and vessel tonnages, and shipbuilding. Comparative data on various types of transportation carriers are presented in section 21.

Principal sources of these data are the annual FAA Statistical Handbook of Aviation issued by the Federal Aviation Administration (FAA); the annual Waterborne Commerce of the United States issued by the Corps of Engineers of the Department of the Army; the monthly and annual issues of U.S. Waterborne Exports and General Imports, and U.S. Airborne Exports and General Imports, the annual Vessel Entrances and Clearances, and the monthly Highlights of U.S. Export and Import Trade, issued by the Bureau of the Census. In addition, the Bureau of the Census in its commoditivateneportation survey (part of the census of transportation, taken every five years, for years ending in "2" and "7") provides data on the type, weight, and value of commodities shipped by manufacturing establishments in the United States, by means of transportation, origin, and destination.

Air transportation data are also presented annually by the Air Transport Association of America, Washington, DC in Air Transport Facts and Figures. Additional sources of data on water transportation include A Statistical Analysis of the World's Merchant Fleets, issued periodically by the U.S. Maritime Administration; The Bulletin, issued monthly by the American Bureau of Shipping, New York; and the Annual Summary of Merchant Ships Completed in the World and the Register Book, published by Lloyd's Register of Shipping, London, England.

Civil aviation.—Federal promotion and regulation of civil aviation have been carried out by the FAA and the Civil Aeronautics Board (CAB). The CAB promoted and regulated the civil air transportation industry within the United States and between the United States and foreign countries. The Board granted licenses to provide air transportation service, approved or disapproved proposed rates and fares, and approved or disapproved proposed greements and corporate relationships involving air carriers. In December 1964, the CAB ceased to exist as an agency. Some of its functions were transferred to the Department of Transportation (DOT), as outlined below. The responsibility for investigation of aviation accidents resides with the National Transportation Safety Board.

The Office of the Secretary, DOT aviation activities include: negotiation of international air transportation rights, selection of U.S. air carriers to serve capacity controlled international markets, oversight of international rates and fares, maintenance of essential air service to small communities, and consumer affairs. DOT's Research and Special Programs Administration (RSPA) handles aviation information functions formerly assigned to CAB.

The principal activities of the FAA include: The promotion of air safety; controlling the use of navigable airspace; prescribing regulations dealing with the competency of airmen, airworthiness of aircraft, and air traffic control; operation of air route traffic control centers, airport traffic control towers, and flight service stations; the design, construction, maintenance, and inspection of navigation, traffic control, and communications equipment; and the development of general aviation.

The CAB published monthly and quarterly financial and traffic statistical data for the certificated oute air carriers. RSPA continues these publications, including both certificated and non-certificated (communter) air carriers. The FAA publishes annually data on the use of airway facilities; data elated to the location of airmen, aircraft, and airports; the volume of activity in the field of non-air arrier (general aviation) flying; and aircraft production and registration.

General aviation comprises all civil flying (including such commercial operations as small demand ir taxis, agriculture application, powerline patrol, etc.) but excludes certificated route air carriers, upplemental operators, large-aircraft commercial operators and commuter airlines.

Air carriers and service.—The CAB previously issued "certificates of public convenience and ecessity" under Section 401 of the Federal Aviation Act of 1958 for scheduled and non-scheduled tharter) passenger services and cargo services. It also issued certificates under Section 418 of the ct to cargo air carriers for domestic all-cargo service only. The DOT Office of the Secretary now

issues the certificates under a "fit, willing and able" test of air carrier operations. Carriers operating only 60 seat or less aircraft are given exemption authority to carry passengers, cargo and mail in scheduled and non-scheduled service under Part 298 of the DOT (formerly CAB) regulations. Exemption authority carriers who offer scheduled passenger service to an essential air service point must meet the "fit, willing and able" test.

Vessel shipments, entrances, and clearances.—Shipments by dry cargo vessels comprise shipments on all types of watercraft, except tanker vessels; shipments by tanker vessels comprise all types of cargo, liquid and dry, carried by tanker vessels.

A vessel is reported as entered only at the first port which it enters in the United States, whether or not cargo is unloaded at that port. A vessel is reported as cleared only at the last port at which clearance is made to a foreign port, whether or not it takes on cargo. Army and Navy vessels entering or clearing without commercial cargo are not included in the figures.

Units of measurement.—Cargo (or freight) tonnage and shipping weight both represent the gross weight of the cargo including the weight of containers, wrappings, crates, etc. However, shipping weight excludes lift and cargo vans and similar substantial outer containers. Other tonnage figures generally refer to stowing capacity of vessels, 100 cubic feet being called 1 ton. Gross tonnage comprises the space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers, or crew, with certain minor exceptions. Net or registered tonnage is the gross tonnage less the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. Substantially, it represents space available for cargo and passengers. The net tonnage capacity of a ship may bear little relation to weight of cargo. Deadweight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board) to load line. It is, therefore, the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

No. 1023. CERTIFICATED ROUTE PASSENGER/CARGO AIR CARRIERS—NUMBER, OPERATING REVENUES, AND EXPENSES: 1970 TO 1986

(In millions of dollars, except number of carriers. 1970-1979, includes acheduled and charter operations. Beginning 1980, includes all cargo carriers. Minus sign (-) indicates loss. See also headnote, table 1024, and Historical Statistics, Colonial Times to 1970, series C 581-4816.

Represents zero.
 The Airline Deregulation Act of 1978 lifted some restrictions on entering new markets. As a result there is no longer a clear striction between domestic and international operators, includes all cargo.
 Scheduled airlines only. Source: Air Transport Association of America, Washington, DC, Air Transport Facts and Figures,

Innual.

3 Excludes those used for crew training and general utility purposes, or held for disposal. Beginning 1975, includes aircraft persted by the scheduled all-cargo certificated route air cerriers. Beginning in 1986 also includes large aircraft (passenger seating spacity of more than 30 or a psyload of more than 7,500 pounds) operated by commuters and air taxis.

3 Seats per aircraft mile. Passenger seat-miles divided by revenue-miles flown in passenger service.

3 Scheduled services of all certificated route air curriers; includes all cargo.

4 Includes all cargo. Beginning 1960 includes very small amount of gasoline.

7 Passenger revenues divided by revenue passenger-miles flown.

8 Beginning 1975, includes all scheduled services of U.S. air carriers operating under 14 CFR 121.

9 Includes mid-air collisions nonfatal to air carrier occupants (excluded in computation of fatal accidents).

#### No. 1025. LARGE AIR TRAFFIC HUBS-SUMMARY: 1985

[In thousands, except number of airports. For calender year. Air traffic hubs are cities and standard metropolitan statistics areas requiring avisition services. A large hub is one which explanes at least one percent of the total explaned revenue passengers in all services and all operations of U.S. certificated route air carriers]

### No. 1027. COMMUTER/REGIONAL AIRLINE OPERATIONS-SUMMARY: 1978 TO 1986

[Calender year data. Commuter/regional airlines operate primarily aircraft of predominately 60 passengers or less and 18,000 pounds of payload capacity serving short heal and small community markets. Represents operations within all North America by U.S. regional carriers. Averages are means. For definition of mean, see Guide to Toular Presentation]

### No. 1031. AEROSPACE INDUSTRY-SUMMARY: 1975 TO 1987

[For calendar year, except employment and earnings annual averages of monthly figures, includes Standard Industrial Classification Codes 372 and 378, industry shipments refer to the total value of all products shipped by establishments classified in the industry. Product shipments refer to the total value of specific products shipped, irrespective of how the establishments which made them are classified]

Preliminary.
 Based on aerospace composite price defistor supplied by the U.S. International Trade Administration.
 All civil sales of aircraft (domestic and export sales of jet transports, commuters, business and personal aircraft and alloopters).
 Plactronics, software, and ground support equipment, plus sales of non-aerospace products which are produced by aerospace-menufacturing establishments and which use technology, processes, and materials derived from aerospace products.
 Popertment of Defense.
 National Aeronautics and Space Administration.
 Tincludes civil aircraft sales (see footnote 3), ommercial space sales, all exports of military aircraft and missiles and related propulsion and parts.

#### No. 1035, U.S. RECEIPTS AND PAYMENTS FOR INTERNATIONAL TRANSPORTATION: 1970 TO 1986

[in millions of dollars, Data are international transportation transactions recorded for balance of payment purposes (see table 1329). Receipts include freight on exports carried by U.S.-operated carriers and foreign cerrier expenditures in U.S. ports. Payments include freight on imports carried by foreign carriers and U.S. cerriers and U.S. cerriers and Freight on exports carried by toreign acriers is excluded since such payments are directly or indirectly for toreign account. Similarly, height on U.S. imports carried by U.S. carriers is a domestic rather than an international transaction. Minus sign (—) indicates excess of payments over receipts. See Historical Statistics, Colonial Times to 1970, series U.S. and U.10, for totals]

#### Section 23

# **Agricuiture**

This section presents statistics on farms and farm population; land use and irrigation; farm cooperatives; farm income, expenditures, and debt; farm output, productivity, and marketings; foreign trade in agricultural products; specific crops; and livestock, poultry, and their products.

The principal sources are the reports issued by the U.S. Bureau of the Census and by the National Agricultural Statistics Service (NASS) and the Economic Research Service (ERS) of the U.S. Department of Agriculture. The Bureau of the Census has taken a census of agriculture every 10 years from 1840 to 1920 and every 5 years from 1925 through 1974. Two 4-year censuses, taken for 1978 and 1982, adjusted the data reference year to coincide with other economic censuses for 1982. The 1982 Census of Agriculture is the most recent census for which reports are presently available. The Department of Agriculture publishes annually Agricultural Statistics, a general reference book on agricultural production, supplies, consumption, facilities, costs, and returns. The Economic Research Service publishes a series of annual reports, Economic Indicators of the Farm Sector. This series comprises five reports: National Financial Summary, State Financial Summary, Production and Efficiency Statistics, Costs of Production, and Farm Sector Review. Sources of current data on agricultural exports and imports include Foreign Agricultural Trade of the United States, published by the ERS, and the reports of the Bureau of the Census, particularly U.S. General Imports, Schedule A, Commodity by Country, and U.S. Exports, Schedule B, Commodity by Country.

The 44 field offices of the NASS collect data on crops, livestock and products, agricultural prices, farm employment, and other related subjects mainly through sample surveys. Information is obtained on some 75 crops and 50 livestock items as well as scores of items pertaining to agricultural production and marketing. State estimates and supporting information are sent to the Agricultural Statistics Board of NASS which reviews the estimates and issues reports containing State and national data. Among these reports are two annual summaries, Crop Production and Crop Values.

Farms and farmland.—Over time, the Bureau of the Census has used varying definitions of a arm. Data from the census of agriculture reflect the changes in definition since figures are presented for "farms" as defined during the years indicated. For the 1974, 1978, and 1982 Censuses of Igriculture, a farm was defined as any place from which \$1,000 or more of agricultural products were sold, or would have been sold during the census year. Control may have been exercised brough ownership or management, or through a lease, rental, or cropping arrangement. In the case if landowners who had one or more tenants, or renters, the land operated by each was counted as separate farm. The effect of the change in definition must be considered when comparing farms the 1974, 1978, and 1982 censuses with these in previous censuses. In the 1969 census, as well as the 1959 and 1984 censuses, places of less than 10 acres were counted as farms if estimated also of agricultural products for the year amounted to at least \$250, and places of 10 or more cres if such sales amounted to at least \$50.

Unless otherwise stated in the specific tables of this section, the definition of a farm applicable to ata originated by the Department of Agriculture is the one used by the Bureau of the Census for e agriculture census immediately preceding the year or years for which the data are shown.

Farmland refers to all land under the control of a farm operator, including land not actually under altivation or not used for pasture or grazing. Land used for pasture or grazing on a per head basis at was neither owned nor leased by a farm operator is not included except for grazing lands consider by grazing associations leased on a per acre basis.

State totals for 1982 are not directly comparable with totals for 1978 or earlier censuses because changes in data collection procedures. Coverage estimates for 1978 and 1982 indicate about 3.4 d 9.1 percent of all farms, respectively, were not included in census totals. Farms undercounted the census were usually small and accounted for approximately 2 percent of the total value of ricultural products sold and approximately 2 percent of the land in farms. For more explanation

about data comparability, see Appendixes A and C, 1982 Census of Agriculture, volume I reports and Coverage Evaluation, Volume 2, Part 2.

Farm population.—Farm population consists of all persons living on farms in rural areas. Farm population data shown for 1960 to 1975 are based on the definition of a farm used for the 1969 Census of Agriculture. Farm population data for 1978 to 1983 are shown on the basis of both the 1969 and 1974 census farm definitions and are so indicated. Beginning 1984, farm population data are based only on the 1974 census farm definition.

Irrigation.—Irrigated land is defined by the Bureau of the Census as the acreage in farms to which water is artificially applied during the census year. The Bureau of the Census also collects data on the operation of irrigation water supply organizations at 10-year intervals. In 1978, irrigation information was collected from both individual farms and irrigation organizations.

Farm Income.—Gross farm income comprises cash receipts from farm marketings of crops and livestock, Federal government payments made directly to farmers for farm-related activities, rental value of farm homes, value of farm products consumed in farm homes, and other farm-related income such as machine hire and custom work. Farm marketings represent agricultural products sold by farmers multiplied by prices received per unit of production at the local market.

Information on prices received for farm products is generally obtained by the NASS Agricultural Statistics Board from surveys of firms (such as grain elevators, packers, and processors) purchasing agricultural commodities directly from producers. In some cases, the price information is obtained directly from the producers.

Crops.—Estimates of crop acreage and production by the NASS are based on current sample survey data obtained from individual reporters and objective yield counts, reports of carlot shipments, market records, personal field observations by field statisticians, and reports from other sources. Cotton acreage and production are based on sample survey data and on ginning information gathered by the Bureau of the Census.

Through 1985 prices received by farmers are season average prices. They are calculated by weighting monthly prices by monthly sales during the crop marketing season, beginning with the first month in which a particular crop harvest begins. State prices are weighted by sales to obtain U.S. prices. Season average prices include an allowance for outstanding loans and government purchases, if any, for crops under government programs.

Beginning 1986 prices received by farmers are marketing year averages. These averages are based on U.S. monthly prices weighted by monthly marketings during specific periods. U.S. monthly prices are State average prices weighted by marketings during the month. Marketing year average prices do not include allowances for outstanding loans, government purchases, deficiency payments or disaster payments.

All State prices are based on individual State marketing years, while U.S. marketing year averages are based on standard marketing years for each crop. For a listing of the crop marketing years and the participating States in the monthly program, see *Crop Values*, February 1967. Value of production is computed by multiplying State prices by each State's production. The U.S. value of production is the sum of State values for all States. Value of production figures shown in tables 1100 and 1102-1110 should not be confused with cash receipts from farm marketings which relate to sales during a calendar year, irrespective of the year of production.

Price supports.—Under law, farm income from many commodities is supported through two basic Government-supported mechanisms available to producers of eligible commodities: (1) a market price support (loan rate) through which producers may place any portion of their production in approved storage and receive a loan at a specified rate. The farmer may repay the loan with interest and retain the commodity or, at the end of the loan period, forfeit the commodity as full payment of the loan; (2) a farm income support (target price) whose payments vary inversely with the market price of the specified commodity. "Deficiency payments" are made when market prices for a specified period are below the target prices. The payment rate is the difference between the target price and loan rate, whichever is smaller.

Livestock.—Annual inventory numbers of livestock and estimates of livestock, dairy, and poultry production prepared by the Department of Agriculture are based on information from farmers and ranchers obtained by probability survey sampling methods.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability pertaining to Census Bureau and Department of Agriculture data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

#### No. 1056. FARMS-Number and Acreage: 1959 to 1987

[Based on census year definition indicated; for definition of farms and farmland, see text, section 23. Data for census years (indicated by Italics) have been adjusted for underenumeration and are used as reference points along with data from acreage and live-stock surveys in estimating data for other years. Minus sign (—) indicates decrease. See also *Historical Statistics, Colonial Times to 1970*, series K 4-7]

#### No. 1064. FOREIGN OWNERSHIP OF U.S. AGRICULTURAL LAND: 1986

de of sores, except percent. Covers "foreign persons" reporting under the Agricultural Foreign Investment Disclosure 78. As defined in the Act, a "foreign person" is any person who is not a U.S. citizen and who is not a permanent illen of the U.S. Foreign governments and entitles are also "foreign persons." Also, each successive link in a chain of se containing foreign interests is considered a "foreign person." An entity is deemed "foreign person" if it is 10 persons foreign owned by a single foreign person or foreign persons acting in concert, or 50 percent foreign owned by a long person on to acting in concert, none of whom individually holds a 10 percent or greater interest in the entity, acreage figures reported do not necessarily mean that they are wholly owned by foreign investors. Covers reports red accepted as of December 31, 1986]

## No. 1055, FARM REAL ESTATE-SUMMARY: 1970 TO 1987

[1976 end 1975, value data as of Mar. 1; 1979-1961 and 1966-1967, as of Feb. 1; 1962-1965, as of April 1. Excludes A end Hawaii. 1970 value data based on 1999 census definition of farms and farmlend; beginning 1975, based on 1974 or definition, see text, section 23. Total value of land and buildings is estimated by multiplying the number of acres of farmles the average value per acre of land and buildings. Average values are based on land-value data obtained from the cens agriculture. For intercensal years, estimates are made using indices of average value per acre. Indices of average value are based on surveys conducted by the U.S. Dept. of Agriculture]

### No. 1069, FARMS AND FARM OPERATOR DEBT—PERCENTAGE DISTRIBUTION BY DEBT/ASSET RATIO: 1987

[As of Jenuary 1. A farm is a crop or livestock farm if 50 percent or more of its commodity receipts derive from the sale of crop or animal products, respectively. A crop or livestock farm is further categorized as a particular type if 50 percent of its crop or, if applicable, livestock receipts come from a specific commodity area. Based on Farm Costs and Returns Survey conducted in February-March 1987 for the 1989 calendar year]

Source: Production—U.S. Dept. of Agriculture, National Agricultural Statistics Service. In Crop Production, annual. Field Crops (Statistical Bulletin No. 708); Crop Values (Statistical Bulletin No. 729). Supply and disappearance—U.S. Dept. of Agriculture, Economic Research Service, Feed Situation, quarterly; Fate and Oile Situation, quarterly; Wheat Situation, quarterly; Tobacco Situation, quarterly; Cotton and Wood Outbook Statistics, periodic; and Agricultural Supply and Demand Estimates, periodic. All data are also in Agricultural Statistics, annual; and Agricultural Outbook, monthly.

NA Not available. 

1 Except as noted, season average prices received by farmers. U.S. prices are computed by weighting State prices by estimated sales and include an allowance for outstanding loans and government purchases, if any, for crops under government programs.

2 Comprises production, imports, and beginning stocks.

3 Include seed, residual, and other domestic uses not shown separately.

4 Marketing year average price. U.S. prices are computed by weighting U.S. monthly prices by estimated monthly marketings and do not include an allowance for outstanding loans and government purchases and payments.

5 Prices are for hey sold baled.

6 Bales of 480 pounds, net weight.

7 State production figures, which conform with U.S. Bureau of the Census annual ginning enumeration with allowance for cross-State ginnings, rounded to thousands and added for U.S. totals.

7 Stock estimates based on Census Bureau data which results in an unaccounted difference between supply and use estimates and changes in enting stocks.

7 Flue-cured and cigar wapper, crop year July-June; all other types October-September. Farm-sales-weight basis.

10 Includes tobacco carried over on farms.

## Section 24

# **Forests and Fisheries**

This section presents data on the area, ownership, and timber resource of commercial timberand; forestry statistics covering the National Forests and Forest Service cooperative programs; product data for lumber, pulpwood, woodpulp, paper and paperboard, and similar data. In addition, tata are presented on commercial fishing and the fish processing industry.

The principal sources of data relating to forests and forest products are: An Analysis of the Timber Situation in the United States, 1952–2030, Appendix 3; U.S. Timber Production, Trade, Consumption, and Price Statistics, 1950–86; and Land Areas of the National Forest System, issued annually by the Forest Service of the Department of Agriculture; Agricultural Statistics issued by the lepartment of Agriculture; and reports of the census of manufactures (taken every five years) and re annual Current Industrial Reports, issued by the Bureau of the Census. Additional information is published in the monthly Survey of Current Business of the Bureau of Economic Analysis; and the annual Wood Pulp and Fiber Statistics and The Statistics of Paper, Paperboard, and Wood Pulp It the American Paper Institute, New York, NY.

The Bureau of the Census also collects data on foreign trade of forest products. The Bureau of abor Statistics publishes monthly and annual statistics of producer prices for lumber.

The completeness and reliability of statistics on forests and forest products vary considerably. The data for forest land area and stand volumes are much more reliable for areas which have been cently surveyed than for those for which only estimates are available. Estimates of fire damage or uses of fires for Federal lands are considered much better than those for private lands. In genermore data are available for lumber and other manufactured products such as veneer and plytod, etc., than for the primary forest products such as poles and piling and fuelwood.

The principal sources of data relating to fisheries are Fishery Statistics of the United States, and theries of the United States, both issued annually by the National Marine Fisheries Service MFS), National Oceanic and Atmospheric Administration (NOAA).

The NMFS collects and disseminates data on commercial landings of fish and shellfish, freezings d holdings of fishery products, fish meal and oil production, and foreign trade in fishery products arterly data are published on U.S. output of fish sticks, fish portions, and breaded shrimp. Annual lorts include quantity and value of commercial landings of fish and shellfish (by species, region, ite, and type of fishing gear), disposition of landings, number of fishermen, and number and as of fishing vessels and fishing gear. Reports for the fish-processing industry include annual put of canned, packaged, and industrial products and, for the wholesaling and fish processing ablishments, annual and seasonal employment, and number of firms, by product and State.

he Magnuson Fishery Conservation and Management Act of 1976 (Magnuson Act), Public Law 265 as amended, provides for the conservation and management of all fishery resources within U.S. Exclusive Economic Zone (EEZ), except highly migratory species of tuna, and gives the leral Government exclusive authority over domestic and foreign fisheries within 200 nautical is of U.S. shores and over certain living marine resources beyond the EEZ. Within the EEZ, the I allowable level of foreign fishing, if any, is that portion of the "optimum yield" not harvested by vessels. Adjustments in the "optimum yield" level may occur periodically. For details, see Fishs of the United States, 1986. The NMFS collects and disseminates data on catches by foreigning vessels in the EEZ.

**Istorical statistics.**—Tabular headnotes provide cross-references, where applicable, to *Histori-Statistics of the United States, Colonial Times to 1970.* See Appendix IV.

atistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Aplix V.

### NO. 1117. NATIONAL FOREST LANDS AND PURCHASES: 1960 TO 1986

[Area as of June 30 except, beginning 1980, as of Sept. 30; purchases for years ending June 30, except as noted. Includes Puerto Rico. Prior to Oct. 1976, lands to be purchased under the Weeks Law and related acts were approved by the National Forest Reservation Commission which also set prices on such lands. With the passage of the National Forest Management Act, all functions of the Commission were transferred to the Secretary of Agriculture. Actual purchases are made by U.S. Department of Agriculture. See also Historical Statistics, Colonial Times to 1970, series L. 10-14]

Source of tables 1148 and 1149: U.S. National Oceanic and Atmospheric Administration, National Marine Flaheries Service //Bihary Statistics of the United States, annual; and Flaheries of the United States, annual. Compiled from U.S. Bureau of the Census date.

Section 25

# Mining and Mineral Products

This section presents data relating to mineral industries and their products, general summary neasures of production and employment, and more detailed data on production, prices, imports and exports, consumption, and distribution for specific industries and products. Data on mining and nineral products may also be found in sections 27 and 31 of this *Abstract*; data on mining employment may be found in section 13.

"Mining" comprises the extraction of minerals occurring naturally (coal, ores, crude petroleum, atural gas) and quarrying, well operation, milling, refining and processing and other preparation astomarily done at the mine or well site or as a part of extraction activity. (Mineral preparation ants are usually operated together with mines or quarries.) Exploration for minerals is included as the development of mineral properties.

The principal governmental sources of these data are the three-volume *Minerals Yearbook*, publied by the Bureau of Mines, Department of the Interior, and various monthly and annual publicains of the Energy Information Administration, Department of Energy. See text, section 19 for list Department of Energy publications. In addition, the Bureau of the Census conducts a census of neral industries every 5 years. Non-government sources include the *Annual Statistical Report* of 9 American Iron and Steel Institute, Washington, DC; *Metals Week* and the monthly *Engineering of Mining Journal*, issued by the McGraw-Hill Publishing Co., New York, NY; *The Iron Age*, issued by the Chilton Co., Philadelphia, PA; and the *Joint Association Survey of the U.S. Oil and is Industry*, conducted jointly by the American Petroleum Institute, Independent Petroleum Assortion of America, and Mid-Continent Oil and Gas Association.

Mineral statistics, with principal emphasis on commodity detail, have been collected by the Geoical Survey or by the Bureau of Mines since 1880. Current data in Bureau of Mines publications lude quantity and value of nonfuel minerals produced, sold or used by producers, or shipped; antity of minerals stocked; crude materials treated and prepared minerals recovered; and connption of mineral raw materials. The U.S. Mine Safety and Health Administration also collects publishes data on workhours, employment, accidents, and injuries in the mineral industries, apt petroleum and natural gas. In October 1977, mineral fuel data collection activities of the reau of Mines were transferred to the Energy Information Administration.

'ensuses of mineral industries have been conducted by the Bureau of the Census at various rivals since 1840. Beginning with the 1967 census, legislation provides for a census to be conted every fifth year for years ending in "2" and "7." The censuses provide, for the various types mineral establishments, information on operating costs, capital expenditures, labor, equipment, energy requirements in relation to their value of shipments and other receipts. Commodity stacs on many manufactured mineral products are also collected by the Bureau at monthly, quarry, or annual intervals and issued in its *Current Industrial Reports* series.

general, figures shown in the individual commodity tables include data for outlying areas, and therefore not agree with summary table 1154. Except for crude petroleum and refined prodite export and import figures include foreign trade passing through the customs districts of ed States and Puerto Rico, but exclude shipments between U.S. territories and the customs icts.

istorical statistics.—Tabular headnotes provide cross-references, where applicable, to *Histori-Statistics of the United States, Colonial Times to 1970.* See Appendix IV.

atistics for States and metropolitan statistical areas (MSAs),—Data for States and MSAs also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Ap-lix V.

### No. 1163. MINERAL INDUSTRIES-LOST WORKDAY INJURIES AND FATALITIES: 1980 TO 1965

[Excludes office workers. Lost workday injuries are nonfatal occurrences that result in days away from work, days of restricted work activity or a permanent disability. Data for all years includes injuries to independent contractors at mine sites. Beginning with 1983, rates for the non-coal industries are based only on employment and hours worked by mine employees. See also Historical Statistics, Colonial Times to 1970, series M 271–286]

ITEM	1980	1983	1984	1905	ITEM	1963	1983	1984	1996

<sup>&</sup>lt;sup>1</sup> Source: U.S. Bureau of the Census, U.S. Exports, Schedule E Commodity by Country, FT 410, monthly, and U.S. Imports and Imports for Consumption, Schedule A Commodity by Country, FT 135, monthly.

<sup>8</sup> Source: 1973–1975 American Petroleum Institute, Washington, D.C., thereafter, U.S. Energy Information Administration, U.S. Crude Off, Natural Gas, and Natural Gas Liquida Reserves, ennuel.

<sup>8</sup> Source: 1973–1960, U.S. Energy Information Administration, Petroleum Residence in the United States and U.S. Territories, ennuel.

<sup>8</sup> For 1973 through 1990, utilization rate is derived by dividing gross input to distillation units by one-half of the current year January 1 capacity, Percentages were derived from unrounded numbers. For 1961 and forward, utilization is derived by averaging reported monthly utilization.

<sup>8</sup> Average desier's net price per gallon (incl. tac) of regular grade full service gasoline. Data from Pitti's Oligram Price Service.

Source: Except as noted, through 1975, U.S. Bureau of Mines, Alinerals Yearbook; thereafter, U.S. Energy Information Administration, Monthly Energy Review, Annual Energy Review, and Petroleum Supply Annual.

1 Estimated, end of year. Source: 1970–1975; American Gas Association, Arlington, VA. (Copyright.); lar, U.S. Energy Information Administration, U.S. Crude Oit, Natural Gas, and Natural Gas Liquids Reserves, annual, riseted production includes gross withdrawals from reservoirs less quantities used for reservoir repressuring and quantities or flarred. For 1980 and thereafter, it excludes the nonhydrocarbon gases subsequently removed.

2 Includes deliveries to municipalities and public authorities for institutional heating and other purposes, sites fuel.

4 Volumetric reduction in natural gas resulting from the extraction of natural gas constitutents at natural gas large plants.

5 Beginning with 1880, includes liquided natural gas (LNG) storage in above ground tanks.

6 Derived by ting the sum of additions to storage, exports and consumption from total supply.

DE: Except as noted, U.S. Energy Information Administration, Annual Energy Review, International Energy Annual, and y Energy Review, March 1987.

### No. 1175, COAL AND COKE-SUMMARY: 1970 TO 1986

[Includes coal consumed at mines. Demonstrated coal reserve base for United States on Jan. 1, 1985, was 478 billion tons Recoverability varies between 40 and 90 percent for inclividual deposits; 50 percent or more of overall U.S. coal reserve base is believed to be recoverable. See also *Historical Statistics*, *Colonial Times to 1970*, series M 93-128]

erio Rico; excludes Alaska except for imports and exports.

a Includes natural, slag, and hydraulic lime plants, sparately, except 1970 excludes slag coment.

Bactudes byproduct gypsum. Excludes Alaska, Hawali, and Puerio Rico, except for imports and exports.

Each combination mine and plant is counted as one establishment.

Made from domestic, imported, and byproduct or consumption; P<sub>2</sub>O<sub>5</sub> content not available.

Amount sold or used plus imports minus exports.

Bureau of Mines, Minerals Yestbook.

#### No. 1192. PLATINUM-GROUP METALS-SUMMARY: 1970 to 1986

[In thousands of troy ounces, except as indicated. The platinum group is comprised of six closely related metals. The metals commonly occur together in nature and are among the scarcest of the metallic elements. The metals are refractory, are chemically inert toward a wide variety of materials even at high temperatures; are used as catalysts in the chemical, petrolaum refining, and automotive industries, and as corrosion-resistant materials in the chemical, electrical, glass, and dental-medical industries]

#### No. 1195, FERROALLOYS-SUMMARY: 1970 to 1986

uction data for ferroalitys are developed by the Bureau of Mines by means of monthly and annual surveys. Selfined as an alloy of iron and contains a sufficient amount of one or more chemical elements to be useful as an oducing these elements into molten metal, usually steel. The major consumers of ferroalitys are the steel and y industries; see tables 1275–1276]

# No. 1196. BERYLLIUM-SUMMARY: 1970 to 1986

except as indicated Represents beryllium mineral concentrates. Beryllium has great stiffness, (exceeding that of including steels), useful heat diseipation properties, a very high strength-to-weight ratio, useful nuclear moderating properties, and excellent corrosion resistance. Its major use is as a beryllium-copper alloy in communications, ritching, and other electronic and electrical applications)

Section 26

# Construction and Housing

presents data on the construction industry and on various indicators of its activity housing units and their characteristics and occupants; on public housing; on mortcommercial buildings.

Il source of these data is the U.S. Bureau of the Census, which issues a variety of titons. Construction statistics compiled by the Bureau appear in its monthly Constructions with various quarterly or annual supplements; Housing Starts and Housing Commit data by type of structure and by 4 major census regions; New One-Family Houses Sale also provides statistics annually on physical and financial characteristics for all by the 4 major census regions; Value of New Construction Put in Place includes osite construction cost indexes; Price Index of New One-Family Houses Sold prefigures and annual regional data; and Housing Units Authorized by Building Permits Imately 17,000 permit-issuing jurisdictions in the United States. Statistics on expending of residential properties are issued quarterly and annually in Residential Alterations Reports of the censuses of construction industries (see below) are also issued on

is Bureau publications include the *Current Housing Reports* series, which comprises fousing Vacancies, the quarterly Market Absorption of Apartments, the Annual Housderports of the censuses of housing and of construction industries. Construction thed quarterly by the International Trade Administration, U.S. Department of Combinary of the census series and other construction statistics series from the Federal nd private agencies.

ses include the monthly Dodge Construction Potentials of F. W. Dodge Division, iformation Systems Company, New York, NY, which presents State data on constructhe National Association of Home Builders with State-level data on housing starts; LASSOCIATION OF REALTORS, which presents data on existing home sales; the promic Analysis, which presents data on residential capital and gross housing prodederal Home Loan Bank Board, the Department of Housing and Urban Development e Veterans Administration, which publish financial data. Data on conventional home provided by the Federal Home Loan Bank Board. The Department of Housing and ment provides data on the gross flow of long-term mortgage loans in its study, The tagge Credit, 1970-1979. Data on mortgages insured by the Federal Housing Adminand on VA-guaranteed loans are also presented in this section. The Energy Information provides data on commercial buildings through its periodic sample surveys.

and surveys.—Censuses of the construction industry were first conducted by the Census for 1929, 1935, and 1939; beginning in 1967, a census has been taken every years ending in "2" and "7"). The latest reports are for 1982.

Xensus of Construction Industries, in accordance with the 1972 Standard Industrial Manual (see text, section 13), defines a construction establishment as a relatively use of business where the usual business activities related to construction are con-

through 1930, the Bureau of the Census collected some housing data as part of its sopulation and agriculture. Beginning in 1940, separate censuses of housing have 10-year intervals. For the 1970 and 1980 censuses, data on year-round housing units 1 and issued on occupancy and structural characteristics, plumbing facilities, value,

studies of the 1950, 1960, 1970, and 1980 censuses estimated the underenumeration ousing units at 2.9 percent, 2.4 percent, 1.7 percent, and 1.5 percent respectively, ite in 1980 for all housing units was 2.6 percent or approximately 2.3 million units, 1 h were vacant housing units.

The Annual Housing Survey (Current Housing Reports, series H-150 and H-170), which began in 1973, provided an annual and ongoing series of data on selected housing and demographic characteristics until 1983. In 1984 the name of the survey was changed to the American Housing Survey. It is currently based on a biennial national sample and on 11 annual MSA samples. All samples represent a cross section of the housing stock in their respective areas. Estimates are subject to both sampling and nonsampling errors; caution should therefore, be used in making comparisons with 1970 and 1980 census data.

Data on residential mortgages were collected continuously from 1890 to 1970, except 1930, as part of the decennial census by the Bureau of the Census. Since 1973, mortgage status data, which are limited to single family homes on less than ten acres with no business on the property, have been presented in the Annual Housing Survey.

Housing units.—In general, a housing unit is a group of rooms or a single room occupied or intended for occupancy as separate living quarters; that is, the occupants do not live and eat with any other persons in the structure, and there is either (1) direct access from the outside or through a common hall, or (2) complete kitchen facilities for the exclusive use of the occupants. Transient accommodations, barracks for workers, and institutional-type quarters are not counted as housing limits.

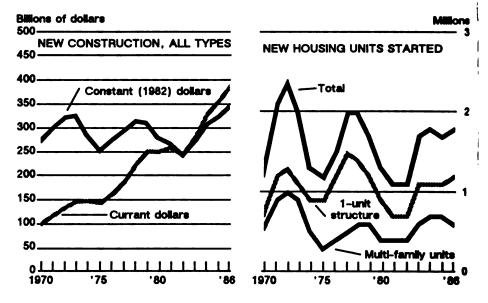

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

NA Not available. ¹ Excludes value of sits. ¹ Covers both building and nonbuilding construction, excluding maintenance and repair. Represents a weighted everage of various indexes used for different types of construction. ¹ Based on average contract unit bid prices for composite mile (involving specific average amounts of excavation, paving, reinforcing sitsel, structural steel, and structural concrete). ¹ Derived from the four quarterly indexes which are weighted averages of costs of labor, materials, and equipment for the construction of dams and reclamation project. ¹ Eastern cities. Based on firm's cost experience with respect to labor rates, materials prices, competitive conditions, efficiency of plant and management, and broductivity. Reflects payment of resies taxes and employee-barseft costs. ⁴ Average of 20 office for types shown. Weights based on surveys of building costs. ⅓ Building construction index computed on bases of hypothetical unit of construction requiring 6 bib. of portland cement, 1088 Mb. ft. of 2' x 4' lumber, 2,500 lb. of structural steel, and 68.36 hours of sidiled labor. General construction index based on same materials components combined with 200 hours of common labor. ¹ Based on data covering public utility construction costs for 95 items in 6 geographic regions. Covers alled and common labor, does not reflect ter payments nor employee-benefit costs. ⁴ As derived by U.S. Bureau of the Census. Covers steem production plants only.

Source, U.S. Bureau of the Census. In U.S. Department of Commerce, International Trade Administration, Construction Review, bimonthly.

#### No. 1200, Value of New Construction Put in Place: 1980 to 1986

(In millions of dollars, Represents value of construction put in place during year; differs from building permit and construction put in place during year; differs from building permit and construction contract data in timing and coverage, includes installed cost of normal building service equipment and selected types of industrial production equipment (largely site fabricated). Excludes cost of shipbuilding, land, and most types of machinery and equipment. For methodology, see Appendix III. See also Historical Statistics, Colonial Times to 1970, series N 1–29 and N 65-69)

owner-occupied" housing units include one-family houses on less than 10 acres without a commercial establishment lice on the property. The data exclude owner-occupied condominium housing units, mobile homes, trailers, boats, s'occupied as a usual residence, as well as owner-occupied noncondominium units in multi-family buildings, owner with a mortgage". Selected monthly owner costs is the sum of payments for mortgages, deeds of trust, or in the property, real estate taxes; fire and hazard insurance on the property, utilities (electricity, gas, and water); and , kerosene, wood, etc.). \* "Gross rent" is the contract rent plus the estimated average monthly cost of utilities s, and water) and fuels (oil, coal, kerosene, wood, etc.) if these are paid for by the renter for paid for the renter by in addition to rent. \* "Specified renter-occupied" housing units include renter-occupied units except one-family or more acres.

I. Bureau of the Census, 1980 Census of Housing, vol. 1, chapters A and B (HC80-1-A and HC80-1-B).

#### No. 1223, Occupied Housing Units—Tenure, by Race of Householder: 1920 to 1983

[In thousands, except as indicated. As of April 1, except 1983, as of fall. Prior to 1990, excludes Alaska and Hawali. Statutos on the number of occupied units are essentially comparable although identified by various terms—the term "family" applies to figures for 1920 and 1930; "occupied dwelling unit," 1940 and 1950; and "occupied housing unit," 1960 to 1963. For 1820, includes the small number of quasifamilies; for 1930, represents private families only. See also Historical Statistics, Colorar Times to 1970, series N 238-245]

S Figure does not meet publication standards. Includes small amount of households that have both central ar conditioners and room units. An air-cooling unit used in dry climates that turns air into molet, cool air by saturating the air with water vapor. All motorized vehicles used by U.S. households for parsonal transportation excluding motorcycles, mopeds, large trucks, and buses. Includes refrigerators without freezer compartments.

\* Excludes water heaters that serve more than one household.

Figure 27.1 Manufactures-Summary: 1972 to 1985

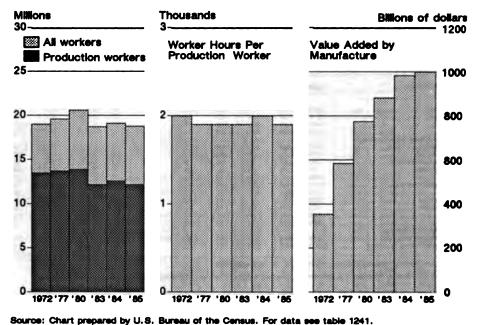

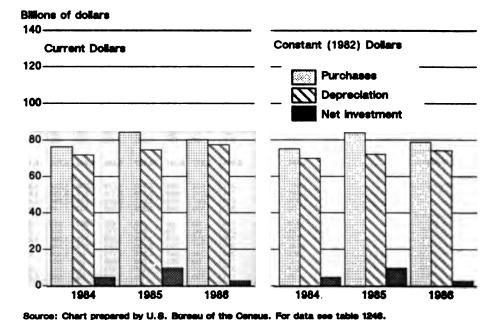

Figure 27.2

Capital in Manufacturing Establishments: 1984 to 1986

## Section 27

# **Manufactures**

s section presents summary data for manufacturing as a whole and more detailed information ajor industry groups and selected specific products. The types of measures shown at the diffusivels include data for establishments; employment and wages; raw materials, fuels, and folly consumed; plant and equipment expenditures; value and quantity of production and ships; value added by manufacture; inventories; and various indicators of financial status.

principal sources of these data are Bureau of the Census reports of the censuses of manures conducted every five years; the *Annual Survey of Manufactures*; and the *Current Industrial*rits series, which presents monthly, quarterly, or annual data on production, shipments, and
a for particular commodities. Indexes of industrial production are presented monthly in the
ral Reserve Board's Federal Reserve Bulletin. Reports on current activities of industries, or
nt movements of individual commodities, are compiled by such government agencies as the
nu of Labor Statistics; the Economic Research Service of the Department of Agriculture; the
setional Trade Administration; and by private research or trade associations such as The Conpe Board, Inc., New York, and the American Iron and Steel Institute, Washington, DC.

a on financial aspects of manufacturing industries are collected by the Bureau of Economic sis (BEA) and the Bureau of the Census. Industry aggregates in the form of balance sheets, and loss statements, analyses of sales and expenses, lists of subsidiaries, and types and nts of security issues are published for leading manufacturing corporations registered with the The BEA issues data on capital in manufacturing industries and capacity utilization rates in facturing. See also section 17, Business Enterprise, in this edition.

seuses and annual surveys.—The first census of manufactures covered the year 1809. Be1809 and 1963, a census was conducted at periodic intervals. Since 1967 it has been taken
5 years (for years ending in "2" and "7"). Census data, either direct reports or estimates
diministrative records, are obtained for every manufacturing plant with one employee or more.
Annual Survey of Manufactures, conducted for the first time in 1949, collects data for the
between censuses for the more general measures of manufacturing activity covered in detail
censuses. The annual survey data are estimates derived from a scientifically selected
of establishments. The most recent, 1985, annual survey is based on a sample of about
establishments of an approximate total of 350,000. It comprises all large plants, which aclor approximately two-thirds of total U.S. manufacturing employment, and a representative
on of the more numerous small plants. Government-owned and -operated establishments are
id.

basic statistical measures of manufacturing activity, such as employment, payrolls, value etc., are defined in essentially the same way for both the annual surveys and the census of ctures. However, the bases for computing average employment vary for different years. For 9, beginning with 1949, average employment was calculated from the figures reported for periods ending nearest the 15th of March, May, August, and November, whereas for 1947 erages were based on 12 monthly employment figures. In 1967, the average employment ion was revised to the pay periods which include the 12th of March, May, August, and Noto provide data more comparable with other statistical series.

Illehments and classification.—The censuses of manufactures for 1947 through 1982 perating manufacturing establishments as defined in the Standard Industrial Classification (SIC), issued by the U.S. Office of Management and Budget (see text, section 13). The is also used for classifying establishments in the annual surveys. The comparised sa presented lanual, it is important to note therefore, that the 1972 edition of the Manual was used for 2 census; and the 1972 edition of the Manual and the 1977 Supplement was used for the 1982 censuses while the 1967 Manual was used for the 1987 census. For the censuses 17 to 1963, reports were required from all establishments employing one or more persons

at any time during the census year. Beginning with the 1967 census, an effort was made to relieve the vary small establishments from the necessity of filing a census report. Approximately 130,000 small single-unit manufacturing firms identified as having less than 20 employees (cutoff varied by industry) benefited from this procedure. Data for these single unit companies were estimated on the basis of government administrative records and industry averages. Each of the establishments tabulated was classified in one of the approximately 450 manufacturing industries as defined by the SIC Manual in 1972, 1977, and 1982. The Manual defines an industry as a number of establishments producing a single product or a closely related group of products. In the main, an establishment is classified in a particular industry if its production of a product or product group exceeds in value added its production of any other product group. While some establishments produce only the products of the industry in which they are classified, few within an industry specialize to that extent. The statistics on employment, payrolls, value added, inventories, and expenditures; therefore, reflect both the primary and secondary activities of the establishments in that industry. For this reason care should be exercised in relating such statistics to the total shipments figures of products primary to the industry.

The censuses for 1947 through 1982 were conducted on an establishment basis. The term "establishment" signifies a single physical plant site or factory. It is not necessarily identical with the business unit or company, which may consist of one or more establishments. A company operating establishments at more than one location is required to submit a separate report for each location. An establishment engaged in distinctly different lines of activity and maintaining separate payroll and inventory records is also required to submit separate reports.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

No. 1240. GROSS NATIONAL PRODUCT IN MANUFACTURING IN CURRENT AND CONSTANT (1962)
DOLLARS: 1970 TO 1986

[In billions of dollars, except percent. For definition of gross national product, see text, section 14. Based on 1972 Standard Industrial Classification]

X Not applicable. Z Less than 8600,000. 1 Standard Industrial Classification Code; see lent, section 27. 3 "All employees" represents the everage of "production workers" plus all other applicables produced expensively for central others or auxiliaries which serve the semillativity dependent of the programment of a company, relate that the general public. Separate reports were obtained from such units if it is offerent location or if they serviced more than one establishment Searce: U.S. Bureau of the Centure of Alexandrothers, 1977 and 1982, General Service in Annual Servey of Alexandrothers.

### PERCENT OF SHIPMENTS ACCOUNTED FOR BY LARGE MANUFACTURING COMPANIES, SELECTED INDUSTRIES: 1977 AND 1982

i (excluding those classified as "Miscellaneous" or "Not elsewhere classified") as determined by value of 177 of \$4 billion or more. Industry codes and descriptions are based on the 1972 Standard Industrial Inual (SIC), see text, section 27. Determination of company affiliation of establishment is based on census city available records. "Largest" companies are determined by each company's value added by manufacture in tustry. Industries in the "not elsewhere classified" category are omitted, regardless of their value added]

<sup>1</sup> Standard Industrial Classification; see text, section 13. 

<sup>8</sup> See footnote 8, table 1241. 

<sup>1</sup> Value of production reported instead of value of shipments; for computing adjusted value added modified to include only changes in work-in-process inventories between 1 of year. 

<sup>1</sup> Includes foundries producing gray-iron castings for other plants of the same company, tages do not reflect market shares in industry as such.

X Not applicable. Includes central administrative offices and auditiny units. Includes employment and payroll at administrative offices and auditiny units. If includes employment and payroll administrative offices and auditing units. If all other employees for the payroll period ended nearest the 12th of March. "Production workers" represents the average of the employment for the payroll periods ended nearest the 12th of March. May. August, and November.

### NO. 1240. CAPITAL IN MANUFACTURING ESTABLISHMENTS: 1975 TO 1986

[In billions of dollars, except percent. Minus sign (-) indicates decline. Data refer to privately owned manufacturing establishments and are based on the capital expenditures data from the census of manufactures, the Annual Survey of Manufactures, and the inventory investment component of GNP. For details, see source]

# No. 1250. INDEX OF MANUFACTURING CAPACITY AND RELATION OF OUTPUT TO CAPACITY: 1950 TO 1987

[1977 output = 100. Annual figures are averages of quarterly data. Capacity represents estimated quantity of output, relative to output in 1997, which the current stock of plant and equipment in manufacturing industries was capable of producing. Primary processing industries comprise textiles, lumber, paper and putp, perfortedum, rubber, stone, cley, gless, primary metals, statricated metals, and a portion of chemicals. Advanced processing industries comprise chemical products, food, beverages, tobacco, apparel, furniture, printing and publishing, leather, machinery, transportation equipment, instruments, ordnance, and miscellances industry groups]

# 52. LARGE MANUFACTURING COMPANIES—CAPITAL APPROPRIATIONS AND EXPENDITURES, BY INDUSTRY: 1980 TO 1986

e of dollars. Based on reports submitted by companies responding to The Conference Board's *Quarterly Survey of Sproprietions*. This survey is conducted among the 1,000 largest manufacturing companies as listed by total assets, fedions: Authorizations by management to spend funds for new plant and equipment; expenditures: Cost of new plant pment).

#### No. 1253, U.S. SHARE OF WORLD EXPORTS OF MANUFACTURES: 1980 TO 1986

iorts = exports from 15 major trading countries: United States, Austria, Belgium-Luxembourg, Canada, Denmark, France, immary, Italy, Japan, Netherlands, Norway, Sweden, Switzerland, and United Kingdom. Percents are calculated from the exports of the five commodity groups from each of the 15 countries. Percentage shares are based on dollar values districted as current exchange rates. Details are reported according to Revision 2 of the United Nations Standard International assistances in SITC31.

### No. 1255. EMPLOYMENT RELATED TO MANUFACTURED EXPORTS BY INDUSTRY: 1977 TO 1984

[Total employment related to manufactured exports is the sum of employment directly calculated for the plants shipping the exported product, the supplying industries and service organizations and the central administrative offices and auditerias. For manufacturing industries, employment is limited to paid employees in manufacturing plants, while for nonmanufacturing it includes an estimate for working proprietors and partners]

# NO. 1256. EXPORT-RELATED SHIPMENTS AND EMPLOYMENT OF MANUFACTURING ESTABLISHMENTS, 1963 TO 1984, AND BY INDUSTRY, 1984

[The export-related employment data shown do not include the jobs involved in the export of nonmanufactured goods and various services sold to foreign buyers. Thus, jobs in the manufacturing sector that relate to the export of nonmanufacturing goods are excluded from the estimates. In addition, all of the indirect exports being reported are domestically produced, that is, they exclude imports. See source for further details on methodology]

NA Not available. ¹ Standard Industrial Classification; see text, section 13. ² Includes total domestic and export shipments for all manufacturing establishments. ² Includes only the value of menufactured products exported by the producing plants. ⁴ Includes shipments of components, parts, supplies, etc., used by plants producing the export products. ⁴ Employment is limited to paid employees in manufacturing plants producing the export product. The number of employees related to export shipments was calculated for each establishment, aggregated by industry and by States, and inflated to a level comparable to the plant value of exports reported in the official foreign trade statistics at port value. ¹ Manufacturing employment at establishment producing components, parts, supplies, etc. for use by plants producing for export. ¹ Includes administrative and auxiliary units, not shown separately.

1 Barrels of 31 wine gallons (see footnote 7).

2 Source: U.S. Bureau of the Census, Imports for Consumption, General Imports, FT 248.

2 Source: U.S. Bureau of the Census, Census of Manufactures, 1977 and 1982, and Annual Survey of Manufactures,

4 Source: U.S. Dept. of Commerce, International Trade Administration. Based on U.S. Bureau of the Census setimated population 18 years old and over, as of July 1, including Armed Forces abroad.

5 Excludes alcohol produced for Industrial use.

4 A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon; for spirits of less than 100 proof to the wine gallon. (See footnote 8.) A proof gallon is the alcoholole survivalent to the proof gallon; for spirits of less 102 proof of the little of U.S. gallon equivalent to the volume of 231 cubic inches.

5 Production represents total amount removed from ferments, including datelling material, and includes increase after fermentation (by emistoration, sweetening, and addition of wine spirits). In 1975, 358 million gallons of distilling materials were produced; 1977, 347 million gall; 1978, 258 mill. gal; 1980, 148 mill. gal; 1981, 1384 mill. gal; 1981, 1384 mill. gal; 1983, 223 mill. gal; 1984, 169 mill. gal; 1985, 148 mill. gal; and 1986, 148 mill. gal; 1981, 1384 millions abstract.

12 Excludes distilling materials.

13 Includes champagns, other effertweecent wines, and artificially carbonated wines.

<sup>Based on a sample of foundries.

Beginning 1975, data not strictly comparable with 1970.

Includes ductile (nodular) iron castings.

Excludes lead die castings for battery plates and parts.

Excludes webbing scrap (military ammunition cups and discs).

Copper content.

Producers' net shipments consist of total shipments less shipments to other metal mills for further fabrication into other forms of mill products.

Includes wire.</sup>

# No. 1281. ROBOTS, ACCESSORIES, AND COMPONENTS-UNITS SHIPPED AND VALUE: 1984 TO 1986

[Based on a survey of all known manufacturers of robots, robot accessories, and components. Approximately 75 companies reported shipments in 1984, 72 in 1985, and 60 in 1986. Shipment value represents the net sales price, f.o.b. plant, to the customer or branch to which the products are shipped, net of discounts, allowance, freight charges, and returns. A robot is a reprogrammable multi-functional manipulator designed to move materials, parts, tools, or specialized devices through variable programmed motions for the performance of a variety of tasks. Robots are presently classified in the Standard Industrial Classification (SIC) based on their primary industrial function]

Section 28

# Domestic Trade and Services

This section presents statistics relating to the distributive trades and service industries. Data shown for the trades, classified by kind of business, and for the various categories of services (e.g., personal, business, repair, hotel) cover sales or receipts, establishments, employees, payrolls, and other items. Also included are data for franchised businesses.

The principal sources of these data are census reports and survey reports of the Bureau of the Census. Data on gross product in trade and service Industries appear in the monthly Survey of Current Business, issued by the Bureau of Economic Analysis. Financial data for firms engaged in retail, wholesale, or service activities appear in the annual Statistics of Income, published by the Internal Revenue Service.

Censuses.—Censuses of retail trade, wholesale trade, and the service industries have been taken at various intervals since 1929. Beginning with the 1967 Census, legislation provides for a census to be conducted every 5 years (for years ending in "2" and "7").

The establishments covered in the censuses and surveys of business are these classified in 3 divisions defined in the Standard Industrial Classification Manual, 1972 (see text, section 13). Retail trade refers to places of business primarily engaged in selling merchandise for personal or household consumption; wholesale trade, to establishments primarily engaged in selling goods to dealers and distributors for resale or to purchasers who buy for business and farm uses; and services, to establishments primarily engaged in providing a wide range of services for individuals and for businesses.

Data from the 1958 Censuses of Retail Trade and Selected Services exclude nonemployer establishments which had annual receipts of less than \$2,500 and \$1,000, respectively. Beginning with the 1963 censuses, nonemployer establishments which did not operate the entire year were natured if, during the period they operated, their receipts were at a rate which would have reached specified annual totals had they operated the entire year. Beginning with the 1972 Census of Retail Frade, nonemployer establishments are included if, on an annual basis, they reported sales volume of at least \$1,000. The Census of Wholesale Trade excludes establishments with no paid employaes. Beginning in 1977, sales taxes and finance charges are excluded in sales (or receipt) figures of the three censuses.

Prior to 1977, the Census of Selected Services excluded health services (except dental laborato-ties), educational services, social services, membership organizations, and others performing a pro-essional or scientific service (except engineering, architectural, and surveying services). These were covered (except religious organizations and private households) in the 1977 census and the title changed to the Census of Service Industries. However, while most of these industries were again included in the 1982 census, some were not. In 1982, data were not collected for hospitals, alementary and secondary schools, colleges and universities, labor unions and similar organizations, and political organizations. Also in 1977, tax-exempt service industries were covered for the first time.

The Census of Retail Trade beginning in 1977, excludes nonemployer direct sellers. In 1982, the pensus treated each leased department in a store as a separate establishment and classified it according to the kind-of-business it conducted. In prior years, data for leased departments were consolidated with the data for stores in which they were located.

In the retail and service censuses prior to 1982, combined data for all establishments (nonemployer firms plus establishments of employer firms) were presented for selected kind-of-business classifications. In 1982 these data could not be published by kind-of-business because many non-employer firms were miscoded by the Internal Revenue Service (IRS) into miscellaneous categories rather than specific kind-of-business. For retail trade and services, total establishment summary data are available but kind-of-business detail are available only on a national level from the Bureau.

Current surveys.—Current sample surveys conducted by the Bureau of the Census cover various aspects of the retail and wholesale trade and selected service industries. Its *Monthly Retail Trade Report* contains monthly estimates of sales, inventories, and sales of organizations operating 11 or more retail stores (see table 1306), for the United States, by kind of business. In addition, monthly retail sales data for census regions and divisions, large States, metropolitan areas, and

cities are included. Annual figures on sales, yearend inventories, and sales/inventory ratios, by kint of business, appear in the Annual Retail Trade Report.

Statistics from the Bureau's monthly wholesale trade survey include national estimates of merchant wholesalers' sales, inventories, and stock-sales ratios by major summary groups—durable and nondurable—and selected kinds of businesses. Merchant wholesalers are those wholesalers who take title to the goods they sell (e.g., jobbers, exporters, importers, major distributors). These data, based on reports submitted by a sample of firms, appear in the Monthly Wholesale Trade Report. Annual figures on sales, sales-inventory ratios, and yearend inventories appear in the Annual Wholesale Trade Report.

The Service Annual Survey provides annual estimates of receipts for selected service establishments for the United States as a whole.

For the current sample survey programs, retail trade coverage is the same as for the census, wholesale trade coverage is limited to merchant wholesalers; and selected services coverage is less inclusive than the census.

Estimates obtained from annual and monthly surveys are based on sample data and are not expected to agree exactly with results that would be obtained from a complete census of all establishments. Data include estimates for establishments not reporting.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

#### No. 1324. THE LODGING INDUSTRY, BY TYPE OF ESTABLISHMENT—SUMMARY: 1985 AND 1986

An economy lodging establishment offers cleen, standard-eized, fully-furnished modern rooms at usually \$10.00 to \$20.00 per night below the rate of typical full-service motor hotels. Their customers do not need food tacilities, banquet rooms or meeting facilities, indoor recreation areas, or entertainment. An All-suite hotels have rooms, only suites. A suite differs from a hotel room by several characteristics. Generally, there is a separate bedroom, and guest amenities often include "extras" such as a wet bar or microverve, and in some cases a full titchen. A resort hotel is a lodging facility providing an environment conductive to leisure and recreation and an ambience of icotation/destination withe providing a full range of lessure oriented amenities. Besed on Annual Surveys of Lodging Establishments. Covers approximately 800 full-service, 300 economy, 60 all suits, and 180 resort establishments in 1996. All figures except percents are medians. For definition of median, see Guide to Tabular Presentation]

Section 29

# Foreign Commerce and Aid

This section presents data on the flow of goods, services, and capital between the United States and other countries; changes in official reserve assets of the United States; international investments; foreign assistance programs; and import duties.

The Bureau of Economic Analysis publishes current figures on U.S. international transactions and the U.S. international investment position in its monthly Survey of Current Business. Figures for earlier periods are presented in Balance of Psyments—Statistical Supplement, 1963 revised edition, in the periodic Foreign Grants and Credits by the United States Government, and in the June issues of the Survey of Current Business. Statistics for the foreign aid programs are presented by the Agency for international Development (AID) in its annual U.S. Overseas Loans and Grants and Assistance from International Organizations; and by the Department of Agriculture in its Foreign Agricultural Trade of the United States.

The principal source of merchandise import and export data is the Bureau of the Census. Current data are presented monthly in Report FT 135, U.S. General Imports, Schedule A: Commodity by Country; Report FT 410, U.S. Exports, Schedule E: Commodity by Country; and Report FT 980, Highlights of U.S. Export and Import Trade. The Bureau of the Census Catalog and the Guide to Foreign Trade Statistics lists the Bureau's monthly and annual reports in this field. In addition, the International Trade Administration and the Bureau of Economic Analysis present summary as well as selected commodity and country data for U.S. foreign trade in the Overseas Business Reports and the Survey of Current Business, respectively. The merchandise trade data in the latter source include belance of payments adjustments to the Census data. The Treasury Department's Monthly Treasury Statement of Receipts and Outlays of the United States Government contains information on import duties.

International accounts.—The international transactions tables (Nos. 1327-1329) show, for given time periods, the transfer of goods, services, grants, and financial assets and liabilities between the United States and the rest of the world. The international investment position table (No. 1330) presents, for specific dates, the value of U.S. investments abroad and of foreign investments in the United States. The movement of foreign and U.S. capital as presented in the belance of payments is not the only factor affecting the total value of foreign investments. Among the other factors are changes in the valuation of assets or liabilities, including changes in prices of securities, defaults, expropriations, and write-offs.

Direct investment abroad means the ownership or control, directly or indirectly, by one person of 10 percent or more of the voting securities of an incorporated business enterprise or an equivalent interest in an unincorporated business enterprise. Direct investment position is the value of U.S. perents' claims on the equity of, and receivables due from, foreign affiliates, less foreign affiliates' receivables due from their U.S. perents. Income consists of perents' shares in the earnings of their affiliates plus net interest received by perents on intercompany accounts, less withholding taxes on dividends and interest.

Foreign aid.—Foreign assistance is divided into three major categories—grants (military supplies and services and other grants), credits, and other assistance (through net accumulation of foreign currency claims from the sale of agricultural commodities). Grants are transfers for which no payment is expected (other than a limited percentage of the foreign currency "counterpart" funds generated by the grant), or which at most involve an obligation on the part of the receiver to extend aid to the United States or other countries to achieve a common objective. Credits are loan disburse-

ments or transfers under other agreements which give rise to specific obligations to repay, over a period of years, usually with interest. All known returns to the U.S. Government stemming from grants and credits (reverse grants, returns of grants, and payments of principal) are taken into account in net grants and net credits, but no allowance is made for interest or commissions. Other assistance represents the transfer of U.S. farm products in exchange for foreign currencies (plus, since enactment of Public Law 87-128, currency claims from principal and interest collected on credits extended under the farm products program), less the Government's disbursements of the currencies as grants, credits, or for purchases. The net acquisition of currencies represents net transfers of resources to foreign countries under the agricultural programs, in addition to those classified as grants or credits.

Figures as published in the Foreign Grants and Credits series are not identical with figures shown for Government unilateral transfers and capital in the balance of payments, mainly because of differences in treatment of particular items by the two sets of accounts. Such items include contributions to the multilateral construction program of the North Atlantic Treaty Organization, Government investments in certain productive enterprises abroad, Government receipts on funded claims, and net changes in foreign currency holdings resulting from transactions other than those under the farm products program, such as collections of principal and interest and purchases for dollars.

The basic instrument for extending military aid to friendly nations has been the Mutual Defense Assistance Program authorized by the Congress in 1949. Prior to 1952, economic and technical aid was authorized in the Foreign Assistance Act of 1948, the 1950 Act for International Development, and other legislation which set up programs for specific countries. In 1952, these economic, technical, and military aid programs were combined under the Mutual Security Act, which in turn was followed by the Foreign Assistance Act passed in 1981. Appropriations to provide military assistance were also made in the Department of Defense Appropriation Act (rather than the Foreign Assistance Appropriation Act) beginning in 1986 for certain countries in Southeast Asia and in other legislation concerning programs for specific countries (such as Israel). Figures on activity under the Foreign Assistance Act as reported in the Foreign Grants and Credits series differ from data published by AID or its immediate predecessors, due largely to differences in reporting, timing, and treatment of particular items.

Exports.—The Bureau of the Census compiles export data primarily from Shipper's Export Declarations required to be filed with customs officials for shipments leaving the United States. They include U.S. exports under mutual security programs and exclude shipments to U.S. Armed Forces for their own use.

The value reported in the export statistics is generally equivalent to a free alongside ship (f.a.s.) value at the U.S. port of export, based on the transaction price, including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. This value, as defined, excludes the cost of loading merchandise aboard the exporting carrier and also excludes freight, insurance, and any other charges or transportation and other costs beyond the U.S. port of exportation. The country of destination is defined as the country of ultimate destination or country where the merchandise is to be consumed, further processed, or manufactured, as known to the shipper at the time of exportation. When ultimate destination is not known, the shipment is statistically credited to the last country to which the shipper knows the merchandise will be shipped in the same form as exported.

For certain low-valued shipments, the export statistics since July 1953 include estimates based upon selected samples of such shipments with lower and upper value limits of the sampled shipments varying (Canada excepted) from \$100-\$499 for July 1953-September 1969, \$251-\$499 for October 1969-February 1979, and \$501-\$999, for March 1979-June 1981. For July 1981-December 1984, the statistics for countries other than Canada reflect fully compiled data for shipments valued over \$500. For Canada, the upper value limit was \$1,999 during the period January 1963- December 1984, and lower value limits were raised to \$251 and \$501 in October 1969 and March 1979, respectively. Beginning 1985, data for low-valued exports to all countries are estimated using factors based on the ratios of low-valued shipments to individual country totals. From January, 1985 through December 1986, data are estimated for all shipments valued under \$1,001. Effective January 1987, data are estimated for shipments valued under \$1,501. Shipments valued under \$1,501 represent slightly less than 2.5 percent of the total value of exports.

Beginning January 1978, the Export Classification Schedule was based upon Schedule E, Standard International Trade Classification, Revision 2. This revision affects the comparability of some export statistics.

Imports.—The Bureau of the Census compiles import data from various customs forms required to be filed with customs officials. From 1974-1981, data on import values were presented on three bases: The transaction values f.a.s. (free alongside ship) at the foreign port of export, the c.i.f.

(cost, insurance, and freight), and the previously reported customs import value (as appraised by the U.S. Customs Service in accordance with legal requirements of the Tariff Act of 1930, as amended). This latter valuetion, primarily used for collection of import duties, frequently did not reflect the actual transaction value. Beginning 1982, import data are based on customs values, i.e., the price paid by the buyer to the seller in accordance with the 1979 Trade Agreement Act amendments to the 1930 Tariff Act. For the c.i.f. imports, the new customs value was substituted for the arms-length transaction value used for 1981 and earlier years. The f.a.s. transaction values were discontinued as of January 1982. Country of origin is defined as country where the merchandise was grown, mined, or manufactured. If country of origin is unknown, country of shipment is reported.

Imports are classified either as "General imports" or "Imports for consumption." General imports are a combination of entries for immediate consumption, entries into customs bonded warehouses, and entries into U.S. Foreign Trade Zones, thus generally reflecting total arrivals of merchandise. Imports for consumption are a combination of entries for immediate consumption, withdrawals from warehouses for consumption, and entries of merchandise into U.S. customs territory from U.S. Foreign Trade Zones, thus generally reflecting the total of the commodities entered into U.S. consumption channels.

Since July 1953, the import statistics include estimates, not classified by commodity, for certain low-valued shipments. For July 1953-July 1965, entries valued under \$100, in general, were estimated, while entries valued under \$251 have been estimated for the period July 1965-December 1984. Since January 1985, import statistics include estimates for shipments valued under \$1,001. The estimated low-valued shipments generally amount to about 4 percent of the import total.

Area coverage.—Except as noted, the geographic area covered by the export and import trade statistics is the United States Customs area (includes the 50 States, the District of Columbia and Puerto Rico), the U.S. Virgin Islands (effective January 1981), and U.S. Foreign Trade Zones (effective July 1982). Data for selected tables and total values for 1980, have been revised to reflect the U.S. Virgin Islands' trade with foreign countries, where possible.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

NA Net available. 

Includes "Special Category" items and beginning 1974, includes trade of Virgin Islands with foreign countries. F.a.s. value basis. 

Domestic and foreign exports excluding M.A.P. Grant-Aid shipments, including resports.

Includes commodity groups not shown separately.

4 1980-1973, 1982-1988, customs value basis; 1974-1981, f.a.s. value basis. Beginning 1974, includes trade of Virgin Islands with foreign countries. 

4 1980, change from 1988; thereafter, from previous year. For explanation of average annual percent change, see Guide to Tabular Presentation.

¹Totals shown for exports reflect the value of estimated percel post an Special Category shipments which are not distributed by customs region/district. Beginning 1984, the value of bituminous cost exported through Norfolk, VA; Charleston, SC; and Mobile, AL is reflected in the total but not distributed by region/district. Total bituminous coal exports for the 3 customs districts were valued at \$2.3 billion in 1984, \$2.6 billion in 1985 and \$2.3 billion in 1985 billion in 1985 billion in 1985 billion in 1985.

#### No. 1349. DOMESTIC EXPORTS, BY SELECTED COMMODITY GROUPS: 1970 TO 1986

(In millions of dollars, Totals and subtotals include data for commodities not shown separately. Beginning 1975, exports include nonmonetary gold. Commodity data beginning 1979 are not strictly comparable with previous years due to changes in export classifications; see source for changes. Beginning 1990, includes trade of Virgin Islands with foreign countries (see tootnote 1 for exception). "N.s.c." means not elsewhere classified. See also //fetorical/Statistics, Colonial/Times to 1970, series U 274-294]

Includes revisions not carried to commodity groups; therefore commodity groups will not add to total.
 Beginning 1979, includes pulpwood chips, formerly classified in "Other manufactured goods" under "Wood and manufactures."
 Beginning 1979, includes nubber materials, formerly classified in "Other manufactured goods" under "Rubber manufactures."
 Beginning 1979, includes photocopy apparatus, formerly classified in "Other manufactured goods" under "Photographic and motion picture equipment."
 Excludes parts for tractors.
 Beginning 1979, includes photocopy apparatus, formerly classified in "Other manufactured goods" under "Photographic and motion picture equipment."
 Excludes parts for tractors.
 Beginning 1979, includes photocopy apparatus, formerly classified in "Other manufactured goods" under "Professional, scientific, and controlling instruments"; formerly classified under "Machinery."
 Beginning 1984, includes exports valued \$10,000 and under reported without a valid schedule B commodity number; beginning 1985, includes estimates of export shipments valued under \$1,001.

### NO. 1350. GENERAL IMPORTS, BY SELECTED COMMODITY GROUPS: 1970 TO 1986

[In millions of dollars, Imports are customs value basis for years 1982 to present, f.a.s. (free alongside ship) value basis prior to 1982. Totals and subtotals include value of commodities not shown separately. Beginning 1980, includes trade of Virgin Islands with foreign countries. "N.e.c." means not elsewhere classified. See also Historical Statistics, Colonial Times to 1970, series U 295-316]

# No. 1352. DOMESTIC EXPORTS AND IMPORTS FOR CONSUMPTION OF MERCHANDISE, BY SELECTED SIC-BASED PRODUCT CATEGORY: 1978 TO 1986

[In millions of dollars, includes nonmonetary gold; beginning 1980, includes trade of U.S. Virgin Islands with foreign countries. For 1978-1981, imports are free alongside ship (f.a.s.) value at foreign port exportation; thereafter, customs value basis. Beginning 1978, export data are not strictly comparable to previous years due to changes in the Schedule B export classification]

## Section 30

## **Outlying Areas**

This section presents summary economic and social statistics for Puerto Rico, Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands.

Primary sources are the decennial censuses of population and housing, and the censuses of agriculture, business, manufactures, and construction (taken every five years) conducted by the Bureau of the Census; the annual *Vital Statistics of the United States*, issued by the National Center for Health Statistics; and the annual *Income and Product* of the Puerto Rico Planning Board, San Juan.

Jurisdiction.—The United States gained jurisdiction over these areas as follows:

The islands of *Puerto Rico* and *Guam*, surrendered by Spain to the United States in October 1898, were ceded to the United States by the Treaty of Paris, ratified in 1899. Puerto Rico became a Commonwealth on July 25, 1952, thereby achieving a high degree of local autonomy under its own constitution. The *Virgin Islands*, comprising 50 islands and cays, was purchased by the United States from Denmark in 1917. *American Samoa*, a group of 7 islands, was acquired by the United States in accordance with a convention among the United States, Great Britain, and Germany, ratified in 1900 (Swains Island was annexed in 1925).

By an agreement approved by the Security Council and the United States the Northern Mariana Islands, previously under Japanese mandate, was administered by the United States between 1947 and 1986 under the United Nations trusteeship system. The Northern Mariana Islands became a Commonwealth in 1986.

For a brief summary of U.S. territorial development, see tables 3 and 319.

Censuses.—Because characteristics of the outlying areas differ, the presentation of census data for them is not uniform. The 1960 Census of Population covered all of the places listed above except the Northern Mariana Islands (their census was conducted in April 1958 by the Office of the High Commissioner), while the 1960 Census of Housing also excluded American Samoa. The 1970 Censuses of Population and Housing covered all five areas. The 1959, 1969, and 1978 Censuses of Agriculture covered Puerto Rico, American Samoa, Guam, and the Virgin Islands; the 1964, 1974, and 1982 censuses covered the same areas except American Samoa; and the 1978 census included the Northern Mariana Islands. Beginning in 1967, Congress authorized the economic censuses were conducted in Puerto Rico for 1954, 1958, and 1963, and in Guam and the Virgin Islands for 1958 and 1963. In 1967, the census of construction industries was added for the first time in Puerto Rico; in 1972 Virgin Islands and Guam were covered. Beginning 1982, the economic censuses covered the Northern Mariana Islands.

Information in other sections.—In addition to the statistics presented in this section, other data are included as integral parts of many tables showing distribution by States in various sections of the Abstract. See "Outlying areas of the United States" in the index. For definition and explanation of terms used, see section 1, Population; section 4, Education; section 23, Agriculture; section 26, Construction and Housing; section 27, Manufactures; and section 28, Domestic Trade and Services.

No. 1353. Estimated Resident Population, by Area: 1950 to 1986

[In thousands, As of July 1, includes estimates of Armed Forces stationed in area]

Section 31

# Comparative International Statistics

section presents statistics for the world as a whole and for many countries on a comparative Ith the United States. Selected data are shown for area and population, births and deaths, and industrial indicators, finances, agriculture, communication, and military affairs.

tics of the individual nations may be found primarily in official national publications, generalform of yearbooks, issued by most of the nations at various intervals in their own national
iss, expressed in their own or customary units of measure. (For a listing of selected publicase Guide to Sources.) For handler reference, especially for international comparisons, the
all Office of the United Nations compiles data as submitted by member countries and issues
or of international summary publications, generally in English and French. Among these are
listical Yearbook; the Demographic Yearbook; the Yearbook of International Trade Statistics;
ribook of National Accounts Statistics: Vol. II, International Tables; Population and Vital Staleports (quarterly); the Monthly Bulletin of Statistics; and Energy Statistics Yearbook. Speagencies of the United Nations also issue international summary publications on agriculturr, health, and education statistics. Among these are the Production Yearbook and Trade
rh issued by the Food and Agriculture Organization, the Yearbook of Labour Statistics
ry the International Labour Office, World Health Statistics issued by the World Health Orga, and the Statistical Yearbook issued by the Educational, Scientific, and Cultural Organiza-

sureau of the Census, in Country Demographic Profiles, series ISP-30, presents data on indicountries for both a recent census year and the current period; and in the World Population ieries, estimates of basic demographic measures for countries and regions of the world. The fonal Population Statistics Reports, series P-90 and P-91, issued by the Bureau of the , also present population figures for many foreign countries. More detailed population statisalso available from the Bureau of the Census' computerized data system, the international ise.

J.S. Arms Control and Disarmament Agency and the International Monetary Fund (IMF) also data on international statistics. In its *World Military Expenditures and Arms Transfers*, pubninually, the Arms Control and Disarmament Agency presents data on various economic inputs as well as basic military data. Among the topics presented have been military expendinces national product, imports and exports, and armed forces, by region and/or country. The blishes a series of reports relating to financial data. These include *International Financial* is, *Direction of Trade*, and *Balance of Payments Yearbook*, published in English, French, anish.

itical coverage, country names, and classifications.—Problems of space and availability limit the number of countries and the extent of statistical coverage shown. The list of countried is based almost entirely on a list of sovereign nations, dependencies, and areas of sovereignty published by the U.S. Department of State in Status of the World's Nations. names are shown here as specified in that publication. In the few cases where a lack of ability exists between State Department and United Nations' terminology, the State Departmenterences are used.

countries and regions in tables 1375, 1376, 1378, and 1379 are classified as either "more ed" or "less developed," according to a regional classification system used by the Census in its World Population: 1963. The system is based on the assumption that, within regions, if such factors as industrial development, literacy rate, gross reproduction rate, per capita etc., are somewhat constant. "More developed" countries comprise Japan, Australia, New I, the Soviet Union, and these countries in Northern America and Europe. All others are syeloped".

omic associations.—The Organization for European Economic Co-operation (OEEC), a re-rouping of Western European countries established in 1948 for the purpose of harmonizing

national economic policies and conditions, was succeeded on September 30, 1961, by the Organization for Economic Cooperation and Development (OECD). The member nations of the OECD are Australia, Austria, Belgium, Canada, Denmark, Finland, France, Greece, Iceland, Ireland, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom, the United States, and West Germany, plus Yugoslavia in special status category.

Quality and comparability of the data.—The quality and comparability of the data presented here are affected by a number of factors:

- (1) The year for which data are presented may not be the same for all subjects for a particular country, or for a given subject for different countries, though the data shown are the most recent available. All such variations have been noted. The data shown are for calendar years except as otherwise specified.
- (2) The bases, methods of estimating, methods of data collection, extent of coverage, precision of definition, scope of territory, and margins of error may vary for different items within a particular country, and for like items for different countries. Footnotes and headnotes to the tables give a few of the major time-period and coverage qualifications attached to the figures; considerably more detail is presented in the source publications. Many of the measures shown are, at best, merely rough indicators of magnitude.
- (3) Figures shown in this section for the United States may not always agree with figures shown in the preceding sections. Disagreements may be attributable to the use of differing original sources, a difference in the definition of geographic limits (the 50 States, conterminous United States only, or the United States including certain outlying areas and possessions), or to possible adjustments made in the United States figures by the United Nations or other sources in order to make them more comparable with figures from other countries.

International comparisons of national accounts data.—In order to compara national accounts data for different countries, it is necessary to convert each country's data into a common unit of currency, usually the U.S. dollar. The market exchange rates which are often used in converting national currencies do not necessarily reflect the relative purchasing power in the various countries. For example, using table 1388, it should not be concluded that the United Kingdom's individual standard of living in 1986 was only 56 percent of that of the U.S., as the statistics may imply. It is obviously necessary that the goods and services produced in different countries should be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (see table 1389) instead of exchange rates is intended to achieve this objective.

The method used to present the data shown in table 1389 is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices. By dividing the ratio of the gross domestic products of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power parity (PPP) between the two currencies concerned. PPP's show how many units of currency are needed in one country to buy the same amount of goods and services which one unit of currency will buy in the other country. For further information, see National Accounts, Main Aggregates, volume I, issued annually by the Organization for Economic Cooperation and Development, Paris, France.

# No. 1380. Urban Population; Growth, Birth, and Death Rates; Life Expectancy; and Infant Mortality—Selected Countries

[Covers countries with 10 million or more population in 1967. Growth rate: Annual increase (or decrease) to the population resulting from a surplus or defloit of births over deaths and a surplus or defloit of migrants into or out of the country, expressed as a percentage of the base population. Crude birth rate: Number of births during 1 year per 1,000 persons (based on midyear population). Crude death rate: Number of deaths during 1 year per 1,000 persons (based on midyear population). Minus sign (—) indicates decrease. Infant mortality rate: Number of deaths of children under 1 year of age per 1,000 live births in a calender year)

# IO. 1381. POPULATION OF THE WORLD'S 100 LARGEST URBAN AREAS, 1980 TO 1985, AND PROJECTIONS, 1990 AND 2000

time. The 100 largest cities are large urban agglomerations, composed, in most cases, of the central city, adjacent smaller and towns, and suburbs. City boundaries depend on local administrative boundaries, population densities, types of mic activity and other characteristics. Rankings depend on the population living within the urban agglomeration boundaries iermined by local and national governments. Rankings would not necessarily be the same if uniform criteria were used, stimates for the Chinese cities should be considered tentative]

# NO. 1385. ORGANIZATION FOR ECONOMIC COOPERATION AND DEVELOPMENT (OECD)—GROSS NATIONAL PRODUCT, 1980 TO 1986, AND CHANGE, 1980-1985 AND 1985-1986

[For interpretation of the absolute levels of GNP and per capita GNP, the market exchange rates used in converting national currencies do not necessarily reflect the relative purchasing power in the various countries. As a consequence, it should not be concluded, for instance, that the United Kingdom's individual standard of living in 1985 was only 58 percent of that of the U.S., as the statistics may imply. Minus sign (—) indicates decrease. For explanation of annual percent change, see Guide to Tabular Presentation]

Represents zero.
 <sup>1</sup> National currency values converted into dollars by the average 1986 Market Rate, as published by the international Monetary Fund, Washington, DC.
 <sup>8</sup> GNP or GDP (Gross Domestic Product) implicit price deflators; totals weighted by 1986 (base year) OECD weights.
 <sup>8</sup> See text, section 31.

## No. 1389. GROSS DOMESTIC PRODUCT, TOTAL AND PER CAPITA, USING PURCHASING POWER PARITIES—SELECTED COUNTRIES: 1970 TO 1985

[The goods and services produced in different countries should be valued consistently if the differences observed are meent to reflect real differences in the volumes of goods and services produced. The use of purchasing power parties (PPP) instead of exchange rates is intended to achieve this objective. PPP's show how many units of currency are needed in one country to buy the same amount of goods and services which one unit of currency will buy in the other country. For further explanation of PPP, see text, section 31]

## No. 1421. TOTAL EXTERNAL PUBLIC DEBT, 1980 TO 1985, AND BY TYPE OF CREDITOR, 1985, AND DEBT SERVICE PAYMENTS AND RATIO. 1980 TO 1985

[External public debt is defined as debt repayable to external creditors in foreign currency, goods, or services, with an original or extended maturity of more than one year, which is a direct obligation of, or has repayment guaranteed by, a public body in the borrowing country. Excludes undisbursed debt (amounts not yet drawn by recipient) and unguaranteed private debt, which for some countries is substantial. Debt contracted for the purchase of military equipment is not usually reported. Debt service payments represent the sum of interest payments and repayments of principal on external public debt]

<sup>-</sup> Represents zero. NA Not available. ¹ Includes other types of creditors, not shown separately. ¹ Includes other private financial institutions. ¹ Debt service payments as percent of exports. ¹ The increase in debt cutstanding from 1900 to 1983 includes the refinancing of short-term private debt by public debt, which matures in 1908-87. ¹ Flacel year basis. ¹ The bulk of the debt of Yugoslavian enterprises is reported as nonguaranteed.

# No. 1422. NET FLOW OF FINANCIAL RESOURCES TO DEVELOPING COUNTRIES, BY ORIGIN AND TYPE OF RESOURCE: 1970 TO 1986

[th billions of U.S. dollars. Not flow covers loans, grants, and grant-like flows minus amortization on loans. Military flows are sucluded. Developing countries cover countries designated by Development Assistance Committee as developing. The DAC list differs from the UN list (see table 1378) by the inclusion of Greece, Malta, Portugal, Spain (through 1981), and Vigoelavia, and the exclusion of South Africa. Official development seletance covers all flows to developing countries and multilateral institutions provided by official agencies, including State and local governments, or by their executive agencies, which are administered with the promotion of economic development and welfare of developing countries as their main objective and whose financial terms are intended to be concessional in character with grant element of at least 25 percent. Other official flows cover export credits and portiolio investment from the official sector)

<sup>-</sup> Represents zero. Z Less than 50 cents. 1 Estimated.

## No. 1424. MILITARY EXPENDITURES IN CURRENT AND CONSTANT (1983) DOLLARS: 1975 TO 1984

[in millions of dollars, except as indicated. See also table 517. For most countries, data for expenditures and for GNP were based on local currencies which were deflated to constant 1983 local currency values before conversion to U.S. dollar equivalents. In general, the rates used for conversion are the 1983 average par/market exchange rates as supplied by the international Bark for Reconstruction and Development()

# Guide te — Sources ef Statistics, State Statistical Abstracts, and Fereign Statistical Abstracts

Alphabetically arranged by subject, this guide contains references to the important primary sources of statistical information for the United States. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 1977 or types of data not available in regular series are also included.

Much valuable information may also be found in State reports (see pp. 866-869) and foreign statistical abstracts (see pp. 870 and 871) and in reports for particular commodities, industries, or similar segments of our economic and social structures, many of which are not included here.

Publications listed under each subject are divided into two main groups: "U.S. Government" and "Other." The location of the publisher of each report is given except for Federal agencies located in Washington, DC. Most Federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, tel. (202) 783-3238, or from Government Printing Office bookstores in certain major cities. In some cases, Federal publications may be obtained from the issuing agency.

Major reports, such as the Census of Population, which consist of many volumes, are listed by their general, all-inclusive titles.

## **Bureau of the Census Publications**

In most cases, separate reports of the most recent censuses are available for each State, subject, industry, etc. Complete information on publications of all the censuses and current surveys conducted by the Bureau of the Census appears in the Bureau of the Census Catalog, published annually and available from the Superintendent of Documents.

# **Guide to State Statistical Abstracts**

This bibliography includes the most recent statistical abstracts for States and Puerto Rico published since 1977 plus those that will be issued in late 1987 or early 1988. For some States, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the State as a whole, its component parts, or both. The page counts given for publications are approximate.

# Appendix II

# Metropolitan Area Concepts and Components and Population of Metropolitan Statistical Areas

Statistics for metropolitan areas shown in the Statistical Abstract represent areas designated by the U.S. Office of Management and Budget (OMB) as standard metropolitan statistical areas (SMSA's) or metropolitan statistical areas (MSA's). Effective June 30, 1983, OMB changed the basic term from SMSA to MSA and revised the geographic definitions of many individual metropolitan areas; some new areas were defined, and some areas were redesignated as PMSA's or CMSA's (see further explanation below). The revised definitions appear in OMB press release 83-20 of June 27, 1983. The official standards for defining MSA's appeared in the Federal Register, January 3, 1980 (part 6). Revisions of MSA definitions were made by OMB effective 1984, 1985, 1986, and 1987, mainly to add newly qualified MSA's or central cities.

The list of areas which follows (see p. 875) specifies components and population totals and refers to the definitions in effect on June 30, 1987. On that date, there were 265 MSA's, as well as 21 CMSA's comprising 73 PMSA's (including 4 MSA's, 1 CMSA, and 2 PMSA's in Puerto Rico). The figures in tables A, B, and C below (see pp. 873 and 874), exclude the areas in Puerto Rico.

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. Standard definitions of metropolitan statistical areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation, "Standard Metropolitan Areas"; the term was changed to SMSA in 1959. From 1977 to 1981, the SMSA's were the responsibility of the Office of Federal Statistical Policy and Standards, Department of Commerce.

The criteria for the establishment and definition of SMSA's were modified in 1958, 1971, and 1975. The current standards were adopted in January 1980; they provide that each MSA must include at least:

(a) One city with 50,000 or more inhabitants, or

(b) A Census Bureau-defined urbanized area of at least 50,000 inhabitants and a total MSA population of at least 100,000 (75,000 in New England).

The standards provide that the MSA include as "central county(ies)" the county in which the central city is located, and adjacent counties, if any, with at least 50 percent of their population in the urbanized area. Additional "outlying counties" are included if they meet specified requirements of commuting to the central counties and of metropolitan character (such as population density and percent urban). In New England the MSA's are defined in terms of cities and towns rather than counties.

The 1980 standards provide that within metropolitan complexes of 1 million or more population, separate component areas are defined if specified criteria are met. Such areas are designated primary metropolitan statistical areas (PMSA's); and any area containing PMSA's is designated a consolidated metropolitan statistical area (CMSA). Besides the 21 CMSA's, there are 17 MSA's of 1 million or more in 1986 within which no component PMSA's are established. Of the 73 PMSA's, most were formerly SMSA's, but some were newly established in 1983.

Of the 21 CMSA's most were previously recognized as standard consolidated statistical areas (SCSA's), but 5 were formerly SMSA's within which PMSA's were newly qualified in 1983.

The standards adopted in 1980 were implemented in two stages. First, they were used to define a group of 36 new areas in June 1981. The 323 SMSA's as of June 30, 1981 were reported in the 1980 census tabulations and publications. Next, the boundaries of all SMSA's were reviewed in 1982-83 under the new standards after 1980 commuting data became available.

Revised 1980 standards for determining central cities and titles were implemented as part of the 1982-83 review. The largest city in each MSA is designated a "central city"; in addition there may be additional central cities if specified requirements are met. The title of each MSA consists of the name(s) of up to three of its central cities and the name of each State into which the MSA extends. However, a central city generally is not included in an MSA title unless it has at least one-third the population of the area's largest city. Prior to 1983, virtually all central cities appeared in area titles. An MSA may include other cities of 50,000 or more besides its central or title cities.

sport relating to the new MSA definitions has been published as 1980 Census of Populaplementary Report, Metropolitan Statistical Areas (PC80-S1-18). The State and Metropoli1 Data Book, 1986 presents 298 data items for metropolitan areas from a wide variety of
(see inside back cover).

England MSA's and NECMA's.—Because MSA's in New England are defined in terms of id towns rather than counties, some statistical data that are available only for counties be compiled for individual New England MSA's. Therefore, for New England areas, data are or both New England County Metropolitan Areas (NECMA's) and MSA's wherever possible. CMA's provide a county version of the New England areas, but do not replace New England areas as the standard areas. NECMA's are defined corresponding to the 3 CMSA's in New and for the portion of the New York-Northern New Jersey-Long Island CMSA in Connectire are no NECMA definitions corresponding to New England PMSA's.

t of changes in MSA definition.—Changes in the definitions of MSA's since 1949 have dichiefly of (1) the recognition of new areas as, for example, cities reached 50,000 populations (2) the addition of counties (or towns in New England) to existing MSA's as new census wed them to qualify. Also, several formerly separate MSA's have been merged, and occaterritory has been transferred from one MSA to another or from an MSA to nonmetropolitan Comparisons of MSA figures over time may be affected in cases where the MSA definite changed. To maintain comparability, data for an earlier period have been revised in this where possible, to reflect the MSA boundaries of the more recent period. However, this it always be done; for data based on a sample survey, in particular, it is usually not possible the data to reflect changes in MSA definitions that occurred after the survey was made. les A, B, and C that follow, data are given for MSA's as defined for specified dates, thereby g the extent of change in population and land area resulting from revisions in definitions.

# A. NUMBER, POPULATION, AND LAND AREA OF MSA'S AS DEFINED AT SPECIFIED DATES FROM 1950 TO 1987

snoss in population shown here for each year in the successive columns of the table result entirely from net expansion politan territory through changes in the MSA definitions. The differences in population shown for each MSA definition successive lines of the table) result entirely from population changes within that territory, uneffected by changes in MSA a. The changes in 1990 land area result entirely from net expansion of MSA territory. All data include Alaska and nd exclude Puerlo Rico. Subtraction of any line of the table from the line below will show the net effect of change in an and land area undergone by the MSA's as the result of changes in definitions between the specified dates. Such typically occurred throughout the period, not on any single date, and may have included subtractions from, as well as 10, MSA territory. Census population data for 1970 include corrections made since publication. The area data for the differ from the data published in those census definitions of MSA's differ from the data published in those census events they are based on a rement of land areas made during the 1980's, and also reflect changes in inland water area occurring up to 1970]

# Statistical Methedology and Rollability

Introduction.—The data presented in this Statistical Abstract came from many sources. The sources include not only Federal statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health associations, and private organizations such as the American Red Cross and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms and, for ongoing series, the number and frequency of time periods for which data are available.

The statistics presented were obtained and tabulated by various means. Some statistics are based on complete enumerations or censuses while others are based on samples. Some information is extracted from records kept for administrative or regulatory purposes (school enrollment, hospital records, securities registration, financial accounts, social security records, income tax reurns, etc.), while other information is obtained explicitly for statistical purposes through interviews or by mail. The estimation procedures used vary from highly sophisticated scientific techniques, to crude "informed guesses."

Each set of data relates to a group of individuals or units of interest referred to as the target universe or target population, or simply as the universe or population. Prior to data collection the target universe should be clearly defined. For example, if data are to be collected for the universe of households in the United States, it is necessary to define a "household." The target universe may not be completely tractable. Cost and other considerations may restrict data collection to a survey universe of households on some available list, such list being inaccurate, out of date, defining "household" slightly differently, etc. This list is called a survey frame or sampling frame.

The data in many tables are based on data obtained for all population units, a census, or on data obtained for only a portion, or sample, of the population units. When the data presented are based on a sample, the sample is usually a scientifically selected probability sample. This is a sample selected from a list or sampling frame in such a way that every possible sample has a known chance of selection and usually each unit selected can be assigned a number, between zero and one, representing its likelihood or probability of selection.

For large-scale sample surveys, the probability sample of units is often selected as a multistage sample. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as primary sampling units (PSU's). For example, in a national multistage household sample, PSU's are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as secondary sampling units. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single- stage) sample, a list of the sampling units or sampling frame for that stage must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSU's must be obtained. For the final stage of selection, lists of households, and sometimes persons within the households, have to be compiled in the field. If a single-stage sample of the Nation's hospitals is to be selected, a list of hospitals must be obtained to use as the sampling frame. Unfortunately, it is virtually impossible to obtain a complete, up-to-date frame for a hospital survey. This is a problem incurred for most surveys of institutions and for many other types of surveys as well.

Wherever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as sample estimates. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. Estimates based on a sample will, however, generally differ from the hypothetical census figures. Two classifications of

rrors are associated with estimates based on sample surveys: (1) sampling error—the error arising rom the use of a sample, rather than a census, to estimate population quantities and (2) nonsaming error—those errors arising from nonsampling sources. As discussed below, the magnitude of he sampling error for an estimate can usually be estimated from the sample data. However, the nagnitude of the nonsampling error for an estimate can rarely be estimated. Consequently, actual error in an estimate exceeds the estimated error in the estimate.

The particular sample used in a survey is only one of a large number of possible samples of the ame size which could have been selected using the same sampling procedure. Estimates derived rom the different samples would, in general, differ from each other. The standard error (SE) is neasure of the variation among the estimates derived from all possible samples. The standard error is the most commonly used measure of the sampling error of an estimate. Valid estimates of he standard errors of survey estimates can usually be calculated from the data collected in a probibility sample. For convenience, the standard error is sometimes expressed as a percent of the istimate and is called the relative standard error or coefficient of variation (CV). For example, an istimate of 200 units with an estimated standard error of 10 units has an estimated CV of 5 perient.

A sample estimate and an estimate of its standard error or CV can be used to construct interval istimates that have a prescribed confidence that the interval includes the average of the estimates lerived from all possible samples with a known probability. To illustrate, if all possible samples were selected under essentially the same general conditions, and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then:

- Approximately 68% of the intervals from one standard error below the estimate to one standard error above the estimate would include the average estimate derived from all possible samples.
- Approximately 90% of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average estimate derived from all possible samples.
- Approximately 95% of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average estimate derived from all possible samples.

Thus, for a particular sample, one can say with the appropriate level of confidence (e.g., 90% or 15%) that the average of all possible samples is included in the constructed interval. Example of a confidence interval: An estimate is 200 units with a standard error of 10 units. An approximately 90 % confidence interval (plus or minus 1.6 standard errors) is from 184 to 216.

All surveys and censuses are subject to nonsampling errors. Nonsampling errors are two kinds—andom and nonrandom. Random nonsampling errors arise because of the varying interpretation of juestions (by respondents or interviewers) and varying actions of coders, keyers, and other processors. Some randomness is also introduced when respondents must estimate values. These same errors usually have a nonrandom component. Nonrandom nonsampling errors result from total non-esponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide corect information, difficulty interpreting questions, mistakes in recording or keying data, errors of colection or processing, and coverage problems (overcoverage and undercoverage of the target universe). Random nonresponse errors usually, but not always, result in an understatement of samiling errors and thus an overstatement of the precision of survey estimates. Estimating the magnitude of nonsampling errors would require special experiments or access to independent data and, sonsequently, the magnitudes are seldom available.

Nearly all types of nonsampling errors that affect surveys also occur in complete censuses. Since surveys can be conducted on a smaller scale than censuses, nonsampling errors can presumably a controlled more tightly. Relatively more funds and effort can perhaps be expended toward eliciting responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can sometimes be more accurate than census results.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often nade. For example, adjustments are frequently made for nonresponse, both total and partial. Adustments made for either type of nonresponse are often referred to as *imputations*. Imputation for otal nonresponse is usually made by substituting for the questionnaire responses of the nonrespondents the "average" questionnaire responses of the respondents. These imputations are usually made separately within various groups of sample members, formed by attempting to place respondents and nonrespondents together that have "similar" survey characteristics. Imputation for tem nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are "similar" to those of the nonrespondent.

For an estimate calculated from a sample survey, the total error in the estimate is composed of the sampling error, which can usually be estimated from the sample, and the nonsampling error. which usually cannot be estimated from the sample. The total error present in a population quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the Statistical Abstract tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available. To obtain estimates of the estimated standard errors from the sample of interest, obtain a copy of the referenced report which appears at the end of each table.

Principal data bases.—Beginning below are brief descriptions of 44 of the sample surveys and

censuses that provide a substantial portion of the data contained in this Abstract.

#### SECTION 1. POPULATION

Source and Title: Bureau of the Census, Census of Population

Tables: See tables citing Census of Population in section 1 and also in sections 2, 4, 6, 8, 13, 14,

Universe, Frequency, and Types of Data: Complete count of U.S. population conducted every 10 years since 1790. Data obtained on number and characteristics of inhabitants.

Type of Data Collection Operation: In 1970 and 1980, complete census for some items—age, sex, race, marital status and relationship to household head. In 1970, other items collected from a 5% and a 15% probability (systematic) sample of the population. In 1980, approximately 19%

of the housing units were included in the sample. Data Collection and Imputation Procedures: In 1970, extensive use of mail questionnaires in urban areas; personal interviews in most rural areas. In 1980, mail questionnaires were used in even more areas than in 1970, with personal interviews in the remainder. Extensive telephone

and personal followup for nonrespondents was done in both censuses. Imputations were made for missing characteristics.

Estimates of Sampling Error: Sampling errors for data are estimated for all items collected by sample and vary by characteristic and geographic area.

Other (nonsampling) Errors: Evaluation programs are currently being conducted to provide information on the magnitude of some sources of nonsampling errors such as response bias and undercoverage in the 1980 census.

Sources of Additional Material: U.S. Bureau of the Census, Estimates of Coverage of the Population by Sex, Race, and Age: Demographic Analysis, PHC(E)-4; Census of Population: 1970 PC(1)C, Appendix C; and 1980 Census of Population, vol. 1, (PC80-1), Appendixes B, C, and D.

Source and Title: U.S. Bureau of the Census, Current Population Survey (CPS)

Tables: See tables citing Current Population Reports primarily in section 1, but also in sections 2. 3, 4, 8, 12, 13, 14, 23, and 30. Many Bureau of Labor Statistics' (BLS) tables in section 13 are CPS based.

Universe, Frequency, and Types of Data: Nationwide monthly sample survey of civilian noninstitutional population, 14 years old or over, to obtain data on employment, unemployment, and a

number of other characteristics.

Type of Data Collection Operation: Multistage probability sample of about 59,500 households in 729 PSU's in 1986. Over-sampling in some States and the largest MSA's to improve reliability for those areas of employment data on annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75%; year-to-year overlap is 50%.

Data Collection and Imputation Procedures: For first and fifth months that a household is in sample, personal interviews; other months, approximately, 85% of the data collected by phone. Imputation is done for both item and total nonresponse. Adjustment for total nonresponse is done by a predefined cluster of units, by MSA size and residence; for item nonresponse imputa-

tion varies by subject matter.

Estimates of Sampling Error: Estimated CV's on national annual averages for labor force, total employment, and nonagricultural employment, 2%; for total unemployment and agricultural employment, 1.0% to 2.5%. The estimated CV's for family income and poverty rate for all persons in 1986 are .5% and 1.5%, respectively. CV's for subnational areas, such as States, would be larger and would vary by area.

Other (noneampling) Errors: Estimates of response bias on unemployment are not available, but estimates of unemployment are usually 5% to 9% lower than estimates from reinterviews. Four

to 5.0% of sample households unavailable for interviews.

Sources of Additional Material: U.S. Bureau of the Census and Bureau of Labor Statistics, Concepts and Methods Used in Labor Force Statistics from Current Population Survey (Census series P-23, No. 62; BLS Report No. 463) and Bureau of the Census, Current Population Survey (Tech. Paper 40).

(See section 3 below for information pertaining to the Supplement on Aging to the National Health Interview Survey.)

SECTION 2. VITAL STATISTICS

Source and Title: U.S. National Center for Health Statistics (NCHS), Vital Registration System Fables: See tables citing Vital Statistics of the United States, 268 in section 5; 998 in section 21; and 1358 in section 30.

Universe, Frequency, and Types of Data: Annual data on births and deaths in the United States. Type of Data Collection Operation: Mortality data based on complete file of death records, except 1972, based on 50% sample. Natality statistics 1951-1971, based on 50% sample of birth certificates, except a 20% to 50% in 1967, received by NCHS. Beginning 1972, data from some States received through Vital Statistics Cooperative Program and complete file used; data from other States based on 50% sample.

Data Collection and Imputation Procedures: Reports based on records from registration offices of all States, District of Columbia, New York City, Puerto Rico, Virgin Islands, and Guam.

Estimates of Sampling Error: For recent years, CV's for births are small due to large portion of total file in sample (except for very small estimated totals).

Other (nonsampling) Errors: Data on births and deaths believed to be at least 99% complete. Sources of Additional Material: U.S. National Center for Health Statistics, Vital Statistics of the United States, vol. I and vol. II, annual, and Monthly Vital Statistics Report.

Source and Title: U.S. National Center for Health Statistics, *National Survey of Family Growth* **Fables:** See tables 91, 97, and 100-102.

Universe, Frequency, and Types of Data: Periodic survey of women aged 15-44 living in the conterminous United States, excluding women in institutions, to collect data on American women's fertility, family planning, and related aspects of maternal and child health.

Type of Data Collection Operation: Multistage area probability sample. Interviews were conducted with 7,969 women. Black women and women aged 15-19 were sampled at higher rates.

Data Collection and Imputation Procedures: Personal interviews were conducted by trained female interviewers. The data have been adjusted for nonsampling error due to nonresponse by adjusting the sample weights assigned to each case. Missing values for selected variables were imputed.

Estimates of Sampling Error: Estimates of sampling error are provided in the report cited below. Other (nonsampling) Errors: A series of stringent quality control measures were used. These included independent editing of completed questionnaires, verification of coding, short "recheck" interviews with a subsample of respondents, an independent recoding of a sample of questionnaires by NCHS, keypunch verification, and extensive computer editing and "cleaning" by both the contractor and NCHS to check for inconsistent or impossible codes.

Bources of Additional Material: U.S. National Center for Health Statistics, "The National Survey of Family Growth, Cycle III: Sample Design, Estimation Procedures, and Variance Estimation," by W. Mosher, C. Bachrach, and M. Horn, in *Vital and Health Statistics*, series 2, No. 98, September 1985.

# SECTION 3. HEALTH AND NUTRITION

**Bource and Title:** U.S. National Center for Health Statistics, *National Health Interview Survey* (NHIS)

Tables: 147, 166, 167, 171-175, 177, 178, 182, and in section 1, tables 41 and 42, section 4, table 205, and section 12, table 598.

Universe, Frequency, and Types of Data: Continuous data collection covering the civilian noninstitutional population to obtain information on personal and demographic characteristics, illnesses, injuries, impairments, and other health topics. In 1984, the Supplement on Aging (SOA) was added to the NHIS to collect data on the functional status of persons 55 years old and over living in the community. It included questions on characteristics which might affect their ability to live in the community.

Type of Data Collection Operation: Multistage probability sample of 42,000 households (in 376 PSU's) selected in groups of about four adjacent households.

Data Collection and Imputation Procedures: Personal household interviews with extensive followup of nonrespondents. Data are adjusted for nonresponse by imputation procedure based on "average" characteristics of persons in interviewed households in the same geographic area. Estimates of Sampling Error: Estimated CV's: For physician visits by males, 1.5%; for workdays lost by males, 3.5%; for persons injured at home, 4.7%.

Other (nonsampling) Errors: Response rate was 95.7% in 1985 for the NHIS. For the SOA, re-

sponse rate was 95% (89% responded entirely for themselves).

Sources of Additional Material: U.S. National Center for Health Statistics, "Current Estimates from the National Health Interview Survey, U.S., 1983," Vital and Health Statistics, series 10 and the "Supplement on Aging to the 1984 National Health Interview Survey," Vital and Health Statistics, series 1, No. 21, July 1987.

(See section 1 above for information pertaining to tables 93-96, and section 15 pertaining to table 138.)

SECTION 4. EDUCATION

Source and Title: U.S. Department of Education, Center for Education Statistics, Revanues and Expenditures for Public Elementary and Secondary Education

**Tables:** 190 and 191.

Universe, Frequency, and Types of Data: Annual survey of State education agencies to obtain data on revenues and expenditures for public elementary and secondary education. Includes the 50 States, District of Columbia, and the outlying areas.

Type of Data Collection Operation: Complete census; however, data are extracted by State edu-

cation agencies from fiscal reports submitted by local education agencies.

Data Collection and Imputation Procedures: Mail survey is conducted with followup for nonresponse through direct contact with other records.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Not applicable.
Sources of Additional Material: U.S. Department of Education, Center for Education Statistics, Revenues and Expenditures for Public Elementary and Secondary Education, annual.

Source and Title: U.S. Department of Education, Center for Education Statistics, Statistics of Public Elementary and Secondary School Systems

Tables: See tables in section 4 which present data from the Center for Education Statistics pertain-

ing to State public school systems.

Universe, Frequency, and Types of Data: Annual survey of State education agencies to obtain data on pupils enrolled, staff employed, and number of schools. Includes the 50 States, District of Columbia, and the outlying areas.

Type of Data Collection Operation: Complete census; however, data are extracted by State education agencies from fall reports submitted by local education agencies.

Data Collection and Imputation Procedures: Mail survey. Imputations for missing data are derived based on data reported over previous 5 years.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Deviations from State to State, or year to year arise from differences in definitions, and instructions used by State education agencies.

Sources of Additional Material: U.S. Department of Education, Center for Education Statistics, Statistics of Public Elementary and Secondary School Systems, annual.

Source and Title: U.S. Department of Education, Center for Education Statistics, Higher Education General Information Survey (HEGIS), Institutional Characteristics of Colleges and Universities Tables: 200 and 249.

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the Education Directory, Colleges and Universities to obtain data on characteristics of institutions including control (public or private), type (university, other four-year, and two-year) and student charges.

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data for an earlier year, adjusted for trends observed in earlier HEGIS surveys, or data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Nearly 100% response rate.

Sources of Additional Material: U.S. Department of Education, Center for Education Statistics, Education Directory, Colleges and Universities, annual.

Source and Title: U.S. Department of Education, Center for Education Statistics, Higher Education General Information Survey (HEGIS), Fall Enrollment in Institutions of Higher Education Tables: 199, 235, 236, 243, and 244.

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the Education Directory, Colleges and Universities to obtain data on total enrollment by sex, level of enrollment, type of program, racial/ethnic characteristics (in alternate years) and attendance status of student, and on first-tima students.

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data for an earlier year, adjusted for trends observed in earlier HEGIS surveys, or data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Approximately 98% response rate.

Sources of Additional Material: U.S. Department of Education, Center for Education Statistics, Fall Enrollment in Higher Education, annual.

Source and Title: U.S. Department of Education, Center for Education Statistics, Higher Education

General Information Survey (HEGIS), Financial Statistics of Institutions of Higher Education

Tables: 190, 191, 235, and 245.

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the Education Directory, Colleges and Universities to obtain data on financial status and operations, including current funds revenues, current funds expenditures, and physical plant assets. Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data for an earlier year, adjusted for trends observed in earlier HEGIS surveys, or data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: For 1979, a 91.7% response rate. Imputed expenditures amounted to about 2.8% of total expenditures.

Sources of Additional Material U.S. Department of Education, Center for Education Statistics, Financial Statistics of Institutions of Higher Education, annual.

Source and Title: U.S. Department of Education, Center for Education Statistics, Higher Education General Information Survey (HEGIS), Degrees and Other Formal Awards Conferred Tables: 232 and 254-256.

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the Education Directory, Colleges and Universities to obtain data on earned degrees and other formal awards, conferred by field of study, level of degree, sex, and by racial/ethnic characteristics (in alternate years).

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Survey package is usually mailed in the spring with surveys due at varying dates in the summer and fall; mail and phone followup procedures for nonrespondents. Missing data are imputed by using data for an earlier year, adjusted for trends observed in earlier HEGIS surveys, or data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Approximately 99% response rate.

Sources of Additional Material: U.S. Department of Education, Center for Education Statistics, Earned Degrees Conferred, annual.

(See sections 1 and 9 for information pertaining to the Bureau of the Census and section 3 above for the National Center for Health Statistics.)

SECTION 5. LAW ENFORCEMENT, COURTS, AND PRISONS

Source and Title: U.S. Federal Bureau of Investigation, *Uniform Crime Reporting (UCR) Program* Tables: 263-267, 269, 270, 278-280, and 283.

Universe, Frequency, and Types of Data: Monthly reports on the number of criminal offenses that become known to law enforcement agencies. Data are collected on crimes cleared by arrest, by age, sex, race, and ethnic origin of offender, and on assaults on law enforcement officers.

Type of Data Collection Operation: Crime statistics are based on reports of crime data submitted either directly to the FBI by contributing law enforcement agencies or through cooperating State UCR programs.

Data Collection and Imputation Procedures: States with UCR programs collect data directly from individual law enforcement agencies and forward reports, prepared in accordance with UCR standards, to FBI. Accuracy and consistency edits are performed by FBI.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Coverage of 96% of the population (96% in SMSA's, 94% in "other cities," and 89% in rural areas) by UCR program, though varying number of agencies report Some error is present through incorrect reporting.

Sources of Additional Material: U.S. Federal Bureau of Investigation, Crime in the United States.

Source and Title: U.S. Bureau of Justice Statistics (BJS), National Crime Survey

Tables: 271-275.

Universe, Frequency, and Types of Data: Monthly survey of individuals and households in the U.S. to obtain data on criminal victimization of those units for compilation of annual estimates. Type of Data Collection Operation: National probability sample survey of about 59,000 interviewed households in 376 PSU's selected from a list of addresses from the 1970 census, supple-

mented by new construction permits and an area sample where permits are not required.

Data Collection and Imputation Procedures: Interviews are conducted every 6 months for 3 years for each household in the sample; 10,000 households are interviewed monthly. Personal interviews are used in the first, third, fifth, and seventh interviews; the intervening interviews are conducted by telephone whenever possible.

Estimates of Sampling Error: CV's in 1985: 2.2% for crimes of violence; 14.8% for estimate of rape counts; 5.5% for robbery counts; 2.5% for assault counts; 1.4% for personal larceny counts; 2.2% for burglary counts; 1.8% for household larceny; 1.3% for all household crimes;

and 4.8% for motor vehicle theft counts.

Other (noneampling) Errors: Respondent recall errors which may include reporting incidents for other than the reference period; interviewer coding and processing errors; and possible mistaken reporting or classifying of events. Adjustment is made for a household noninterview rate of about 4% and for a smaller within-household noninterview rate.

Sources of Additional Material: U.S. Bureau of Justice Statistics, Criminal Victimization in the

United States, annual.

(See section 2 for details on table 268 and section 9 for details on table 289.)

SECTION 8. ELECTIONS

(See section 1 above for information pertaining to table 418.)

SECTION 9. STATE AND LOCAL GOVERNMENT FINANCES AND EMPLOYMENT

Source and Title: U.S. Bureau of the Census, Census of Governments

Tables: See tables in section 9 citing Census of Governments.

Universe, Frequency, and Types of Data: Survey of all governmental units in the U.S. conducted every 5 years to obtain data on government revenue, expenditures, debt, employment and employee retirement systems, property values, public school systems, and number, size, and struc-

ture of governments.

Type of Data Collection Operation: Complete census. List of units derived through classification of government units recently authorized in each State and identification, counting, and classifica-

tion of existing local governments and public school systems.

Data Collection and Imputation Procedures: Data collected through field and office compilation of financial data from official records and reports for States and large local governments; meil canvass of selected data items, like State tax revenue and employee retirement systems; and collection of local government statistics through central collection arrangements with State gov-

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Some nonsampling errors may arise due to possible inaccuracies in classification, response, and processing.

Sources of Additional Material: U.S. Bureau of the Census, Census of Governments, 1982, vari-

ous reports, and State Government Finances in 1985, GF 85, No. 3.

Source and Title: U.S. Bureau of the Census, Annual Surveys of State and Local Government Tables: See tables citing *Public Employment* and *Governmental Finances* in section 9; table 216 in section 4; table 289 in section 5; and table 573 in section 12.

Universe, Frequency, and Types of Data: Sample survey conducted annually to obtain data on revenue, expenditure, debt, and employment of State and local governments. Universe is all gov-

ernmental units in the U.S. (about 82,000).

Type of Data Collection Operation: Sample of about 22,000 units includes all State governments. county governments with 50,000 + population, municipalities and townships in certain States with 25,000 + population, all school districts with 5,000 + enrollment in October 1981, and other governments meeting certain criteria; probability sample for remaining units. A supplemental survey provides complete coverage of 39,000 local government units for data on taxes and intergovernmental revenue.

Data Collection and Imputation Procedures: Field and office compilation of data from official records and reports for States and large local governments; central collection of local governmental financial data through a number of State governments; mail canvass of other units with mail and telephone followups of nonrespondents. Data for nonresponses are imputed from previous year data or obtained from secondary sources, if available.

Estimates of Sampling Error: CV's for estimates of major employment and financial items are

generally less than 2% for most States and less than 1.2% for the majority of States.

Other (nonsampling) Errors: Nonresponse rate is about 15% for number of units. Other possible errors may result from undetected inaccuracies in classification, response, and processing.

Sources of Additional Material: U.S. Bureau of the Census, Public Employment in 1985, GE 85, No. 1, Governmental Finances in 1984-85, GF 85, No. 5, and Census of Governments, 1982, various reports.

SECTION 10. FEDERAL GOVERNMENT

Source and Title: U.S. Internal Revenue Service, Statistics of Income, Individual Income Tax Returns

Tables: 488-493.

Universe, Frequency, and Types of Data: Annual study of unaudited individual income tax returns, Forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. Data provided on various financial characteristics by size of adjusted gross income, marital status, State of residence, and by taxable and nontaxable returns.

Type of Data Collection Operation: Stratified probability sample of approximately 120,000 returns for tax year 1985 broken into sample strata based on State groupings and currently designed to show the larger of total income or total loss amounts as well as the size of business plus farm receipts. Sampling rates for sample strata varied from .02% to 100%.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records.

Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency.

with other entries on return.

Estimates of Sampling Error: Estimated CV's for tax year 1985: Number of returns in subgroups, ranged from .8% for returns under \$5,000 to .2% for returns over \$500,000 and from less than .05% for 17 different States to 2.2% for District of Columbia; for adjusted gross income less deficit, .1%; and amount of income tax, .2%.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance

checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, Statistics of Income, Individual Income Tax Returns, annual.

Source and Title: U.S. Internal Revenue Service, Corporation Income Tax Returns Tables: Section 17, tables 823-826, and 848.

Universe, Frequency, and Types of Data: Annual study of unaudited corporation income tax returns, Forms 1120 and 1120 (L, M, S, F, or DISC), filed by corporations or businesses legally defined as corporations. Data provided on various financial characteristics by industry and size of total assets, business receipts, taxable income, and income tax.

Type of Data Collection Operation: Stratified probability sample of approximately 89,000 returns in 1984, broken into sample classes generally based on type of return, size of total assets, and size of net income or deficit. Sampling rates for sample strata varied from .4% to 100%.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records.

Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error: Estimated CV's for 1984: Number of returns in subgroups ranged from 1.2% with assets under \$100,000, to 0% with assets over \$100 mil.; for amount of net income and amount of income tax, .1%.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, Statistics of Income, Corporation Income Tax Returns, annual.

SECTION 12. SOCIAL INSURANCE AND HUMAN SERVICES

Source and Title: U.S. Social Security Administration, Benefit Data

Tables: 565 and 566.

Universe, Frequency, and Types of Data: All persons receiving monthly benefits under Title 11 of Social Security Act. Data on number and amount of benefits paid by type and State.

Type of Data Collection Operation: Data based on administrative records. Data based on 100% files, as well as 10% and 1% sample files.

Data Collection and Imputation Procedures: Records used consist of actions pursuant to applications for benefits, updated by subsequent post-entitlement actions.

Estimates of Sampling Error: Varies by size of estimate and sample file size.

Other (nonsampling) Errors: Processing errors, which are believed to be small.

Sources of Additional Material: U.S. Social Security Administration, Annual Statistical Supplement to the Social Security Bulletin.

Source and Title: U.S. Social Security Administration, Supplemental Security Income (SSI) Pro-

Tables: 588-590.

Universe, Frequency, and Types of Data: All eligible aged. blind, or disabled persons receiving SSI benefit payments under SSI program. Data include number of persons receiving federally administered SSI, amounts paid, and State administered supplementation.

Type of Data Collection Operation: Data based on administrative records.

Data Collection and Imputation Procedures: Data adjusted to reflect returned checks and overpayment refunds. For federally administered payments, actual adjusted amounts are used; for State administered, payments are deflated for average rate across all States.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Processing errors, which are believed to be small.

Sources of Additional Material: U.S. Social Security Administration, Annual Statistical Supplement to the Social Security Bulletin.

(See section 1 above for information pertaining to the Current Population Survey; section 3 above for information pertaining to the Supplement on Aging to the National Health Interview Survey; and section 9 for information pertaining to Annual Surveys of State and Local Government.)

SECTION 13, LABOR FORCE, EMPLOYMENT, AND EARNINGS

Source and Title: U.S. Bureau of Labor Statistics (BLS), Current Employment Statistics (CES) Program

lea: 640-642, 646, and 848; in section 21, table 978; and in section 24, table 1121.

Universe, Frequency, and Types of Data: Monthly survey covering about 4 million nonagricultural establishments to obtain data on employment, hours, and earnings, by industry.

Type of Data Collection Operation: Probability sample survey of about 250,000 establishments in

March 1986.

Data Collection and Imputation Procedures: Cooperating State agencies mail questionnaires to sample establishments to develop State and local estimates; information is forwarded to BLS where national estimates are prepared.

Estimates of Sampling Error: Estimated CV's in 1986: For average weekly hours paid, .1% and for average hourty earnings, .2%.

Other (nonsampling) Errors: Incorrect responses believed to be somewhat offsetting. Estimates

of employment adjusted annually to reflect complete universe. Average adjustment is 2%. Sources of Additional Material: U.S. Bureau of Labor Statistics, Employment and Earnings, monthly, Explanatory Notes, tables L-Q and BLS Handbook of Methods, Bulletin 2134-1 (Dec. 1982).

(See section 1 above for information pertaining to the Current Population Survey.)

SECTION 14. INCOME, EXPENDITURES, AND WEALTH

(See section 1 above for information pertaining to the Bureau of the Census.)

SECTION 15. PRICES

Source and Title: U.S. Bureau of Labor Statistics (BLS), Consumer Price Index (CPI)

Tables: 729, 730, 738-741, 743, 750, 755, 756, and in section 3, table 138.

Universe, Frequency, and Types of Data: Monthly survey of price changes of all types of consumer goods and services purchased by urban wage earners and clerical workers prior to 1978, and urban consumers thereafter. Both indexes continue to be published.

Type of Data Collection Operation, Prior to 1978, sample of various consumer items in 56 urban areas; thereafter, in 85 PSU's.

Data Collection and Imputation Procedures: Prices of 400 items are obtained from about 2,300 food outlets, 18,000 rental units, 18,000 housing units (for property taxes), and 22,300 other reporters in 85 areas. Prices of most goods and services are obtained monthly in the 5 largest areas and every 2 months in others.

Estimates of Sampling Error: Estimates of standard errors are not available at present.

nsampling) Errors: Errors result from inaccurate reporting, difficulties in defining conid their operational implementation, lack of systematic method for incorporating new outie sample, and introduction of product quality changes and new products.

of Additional Material: U.S. Bureau of Labor Statistics, The Consumer Price Index: Connd Content Over the Years, Report 517, and BLS Handbook of Methods, Bulletin 2134-2.

Id Title: U.S. Bureau of Labor Statistics, Producer Price Index (PPI)

19-732, 735, and 736; in section 21, table 1020; in section 24, table 1124; and in section 1198.

Frequency, and Types of Data: Monthly survey of producing companies to determine anges of all commodities produced for sale in commercial transactions in primary marhe U.S. Data on agriculture, forestry, fishing, manufacturing, mining, gas, electricity, and

Data Collection Operation: Probability sample of over 3,000 commodities and about espondents.

action and imputation Procedures: Data are collected by mail. If transaction prices are billed, list prices are used. Some prices are obtained from trade publications, organized jes, and government agencies. To calculate index, price changes multiplied by their relathis based on total net selling value of all commodities in 1982.

of Sampling Error: Not applicable.
nsampling) Errors: Not available at present.

of Additional Material: U.S. Bureau of Labor Statistics, BLS Handbook of Methods, Bul-14-1.

#### 1 17. BUSINESS ENTERPRISE

nd Title: U.S. Internal Revenue Service, Statistics of Income, Sole Proprietorship Returns 23-827.

Frequency, and Types of Data: Annual study of unaudited income tax returns of none proprietorships, Form 1040 with business or farm schedules. Data provided on various characteristics by industry, size of business receipts, and adjusted gross income.

leta Collection Operation: Stratified probability sample of approximately 35,000 sole pronips for tax year 1984. The sample is broken into sample classes based on presence or ) of certain business schedules: the larger of total income or loss; and size of business n receipts.

sction and imputation Procedures: Computer selection of sample of tax return records. Justed during editing for incorrect, missing, or inconsistent entries to ensure consistency er entries on return.

of Sampling Error: Estimated CV's for tax year 1981 (1985 not available): For sole prohips, number of businesses, .1%; business receipts, .9%; and net income, .8%.

xnsampling) Errors: Processing errors and errors arising from the use of tolerance

of Additional Material: U.S. Internal Revenue Service, Statistics of Income, Sole Propri-Returns and Statistics of Income Bulletin, Vol. 6, No. 1 (Summer 1986).

nd Title: U.S. Internal Revenue Service, Statistics of Income, Partnership Returns 23-826, 828, and 829.

Frequency, and Types of Data: Annual study of unaudited income tax returns of parts, Form 1065. Data provided on various financial characteristics by industry and size of

s receipts, and total assets (partnerships only).

Nata Collection Operation: Stratified probability sample of approximately 29,000 partnerurns filed for tax year 1983. The sample is broken into sample classes based on combiof gross receipts, total income or loss, and total assets, and on industry. Sampling rates m .1% to 100%.

sction and imputation Procedures: Computer selection of sample of tax return records. flusted during editing for incorrect, missing, or inconsistent entries to ensure consistency er entries on return.

s of Sampling Error: Estimated upper limit CV's tax year 1981 (1985 not available): For of partnerships, 1.5%.

aneampting) Errors: Processing errors and errors arising from the use of tolerance for the data.

of Additional Material: U.S. Internal Revenue Service, Statistics of Income, Partnership and Statistics of Income Bulletin, Vol. 6, No. 1 (Summer 1986).

## **1 18. COMMUNICATIONS**

(See section 27 for information pertaining to table 890.)

SECTION 19. ENERGY

Source and Title: U.S. Energy Information Administration, Residential Energy Consumption Survey Tables: 912-915, 945, and tables 1225-1227 in section 26.

Universe, Frequency, and Types of Data: Triennial survey of households and fuel suppliers. Data are obtained on energy-related household characteristics, housing unit characteristics, use of fuels, and energy consumption and expenditures by fuel type

Type of Data Collection Operation: Probability sample of 6,752 eligible units in 149 PSU's. For responding units, fuel consumption and expenditure data obtained from fuel suppliers to those

households

Data Collection and Imputation Procedures: Personal interviews, Extensive followup of nonrespondents including mail questionnaires for some households. Adjustments for nonrespondents were made in weighting for respondents. Most item nonresponses were imputed.

Estimates of Sampling Error: Estimated CV's for household averages: For consumption or expenditures, 1.3%; for various fuels, values ranged from 1.9% for electricity to 5.3% for LPG.

Other (nonsampling) Errors: Household response rate of 84.2%. Non-consumption data were mostly imputed for mail respondents (3.0% of eligible units). Complete responses from fuel suppliers for various fuels ranged from 83.4% for electricity to 48.3% for fuel oil and kerosene. Sources of Additional Material: U.S. Energy Information Administration, Residential Energy Con-

sumption Survey: Consumption and Expenditures, April 1984 through March 1985.

SECTION 21. TRANSPORTATION—LAND

(See section 2 for information pertaining to table 998; and section 15 for table 1020.)

SECTION 22. TRANSPORTATION—AIR AND WATER

Source and Title: U.S. Bureau of the Census, Foreign Trade—Export Statistics

Tables: See Bureau of the Census citations for export statistics in source notes in sections 22 and

29 and also tables 1148, 1149, 1162, and 1369.

Universe, Frequency, and Types of Data: The export declarations collected by Customs are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, country of destination, Customs district of exportation, and mode of transportation.

Type of Data Collection Operation: Shipper's Export Declarations are required to be filed for the exportation of merchandise valued over \$1,000. Customs officials collect and transmit the documents to the Bureau of the Census on a flow basis for data compilation. Value data for shipments valued under \$1,001 are estimated, based on established percentages of individual coun-

try totals.

Data Collection and Imputation Procedures: Statistical copies of Shipper's Export Declarations are received on a daily basis from Customs ports throughout the country and subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued over \$1,500. Estimates for shipments valued at \$1,500 or less are made, based on established percentages of individual country totals.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Clerical and complex computer checks intercept most processing errors and minimize otherwise significant reporting errors; other nonsampling errors are caused by undercounting of exports to Canada due to the nonreceipt of some Shipper's Export Declarations.

Sources of Additional Material: U.S. Bureau of the Census, U.S. Exports, Schedule E, Commodity by Country, FT 410.

Source and Title: U.S. Bureau of the Census, Foreign Trade-Import Statistics

Tables: See Bureau of the Census citations for import statistics in source notes in sections 22 and

29 and also tables 1148, 1149, 1162, and 1329. Universe, Frequency, and Types of Data: The import entry documents collected by Customs are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, country of origin, Customs district of entry, and mode of transportation.

Type of Data Collection Operation: Import entry documents are required to be filed for the importation of goods into the United States valued over \$1,000 except for articles which must be reported on formal entries when valued over \$250. Customs officials collect and transmit statistical copies of the documents to the Bureau of the Census on a flow basis for data compilation. Estimates for shipments valued under \$1,001 (under \$251, where applicable) are based on established percentages of individual country totals.

Data Collection and Imputation Procedures: Statistical copies of import entry documents, a ceived on a daily basis from Customs ports of entry throughout the country, are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued at \$1,001 and over (\$251 and over, where applicable). Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Verification of statistical data reporting by Customs officials prior to transmittal and a subsequent program of clerical and computer checks are utilized to hold nonsampling errors arising from reporting and/or processing errors to a minimum.

Sources of Additional Material: U.S. Bureau of the Census, U.S. General Imports and Imports for

Consumption, Schedule A. Commodity by Country, FT 135.

#### SECTION 23. AGRICULTURE

Source and Title: U.S. Department of Agriculture, National Agricultural Statistics Service (NASS), formerly Statistical Reporting Service (SRS), Basic Area Frame Sample

Tables: See tables citing NASS in source notes in section 23, which pertain to this or the following

two surveys.

Universe, Frequency, and Types of Data: Three annual sample surveys of U.S. farm operators: June survey collects data on planted acreage and livestock inventories; December survey collects data on livestock inventories and fall-seeded crop acreage and a February Farm Costs and Returns survey that collects data on total production costs.

Type of Data Collection Operation: Stratified probability sample of about 16,000 land area units of about 1 sq. mile (range from .1 sq. mile in cities to several sq. miles in open grazing areas). Sample includes 60,000 parcels of agricultural land. About 20% of the sample replaced annually.

Data Collection and Imputation Procedures: Data collection is by personal enumeration. Imputation is based on enumerator observation or data reported by respondents having similar agricultural characteristics.

Estimates of Sampling Error: Estimated CV's range from 1-2% for regional estimates to 3-6% for State estimates of livestock inventories.

Other (nonsampling) Errors: Minimized through rigid quality controls on the collection process and careful review of all reported data.

Sources of Additional Material: U.S. Department of Agriculture, SRS, Scope and Methods of the Statistical Reporting Service, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

Source and Title: U.S. Department of Agriculture, National Agricultural Statistics Service (NASS), Multiple Frame Surveys

Tables: See tables citing NASS in source notes in section 23, which pertain to this or the following

Universe, Frequency, and Types of Data: Surveys of U.S. farm operators to obtain data on major livestock inventories, selected crop acreages and production, grain stocks, and farm labor characteristics; and to obtain farm economic data for price indexing.

Type of Data Collection Operation: Primary frame is obtained from general or special purpose

lists, supplemented by a probability sample of land areas used to estimate for list incomplete-

Dess.

Data Collection and Imputation Procedures: Mail or personal interviews used for initial data collection. Mail nonrespondent followup by phone and personal interviews. Imputation based on average of respondents.

Estimates of Sampling Error: Estimated CV for number of hired farm workers is about 3%. Estimated CV's range from 1-2% for regional estimates to 3-6% for State estimates of livestock in-

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor

effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, SRS, Scope and Methods of the Statistical Reporting Service, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

Source and Title: U.S. Department of Agriculture. National Agricultural Statistics Service (NASS), Objective Yield Surveys

Tables: See tables citing NASS in source notes in section 23, which pertain to this or the preced-

ing survey.

Universe, Frequency, and Types of Data: Surveys for data on corn, cotton, potatoes, soybeans, wheat, rice, sorghum, and sunflower to forecast and estimate yields.

Type of Data Collection Operation: Random location of plots in probability sample of fields. Fields selected in June or December from Basic Area Frame Sample (see above).

Data Collection and Imputation Procedures: Enumerators count and measure plant characteristics in sample fields. Production measured from plots at harvest. Harvest loss measured from post harvest gleanings.

Estimates of Sampling Error: CV's for national estimates of production are about 2-3%.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor

effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, SRS, Scope and Methods of the Statistical Reporting Service, (name changed to National Agricultural Statistics Service), Miscellaneous Publication No. 1308, September 1983 (revised).

(See section 1 above for information pertaining to the Census of Population and Current Population Survey and section 27 for information pertaining to table 1264.)

SECTION 26, CONSTRUCTION AND HOUSING

Source and Title: U.S. Bureau of the Census, Monthly Survey of Construction

Tables: 1208, 1209, and 1211-1214.

Universe, Frequency, and Types of Data: Survey conducted monthly of newly constructed housing units (excluding mobile homes, and nonhousekeeping residential buildings such as motels, hotels, courts and cabins). Data are collected on the start, completion, and sale of housing (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: Probability sample of housing units obtained from building

Type of Data Collection Operation: Probability sample of housing units obtained from building permits selected from 16,000 permit-issuing places through 1984 and, beginning in 1985, 17,000 places. For nonpermit places, multistage probability sample of new housing units selected in 169

PSU's. In those areas, all roads are canvassed in selected enumeration districts.

Data Collection and Imputation Procedures: Data are obtained by telephone inquiry and field visit.

Estimates of Sampling Error: Estimated CV of 3% to 4% for estimates of national totals, but are as high as 20% for estimated totals of more detailed characteristics, such as housing units in multiunit structures.

Other (nonsampling) Errors: Response rate is over 90% for most items. Nonsampling errors are attributed to definitional problems, differences in interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.

Sources of Additional Material: U.S. Bureau of the Census, Construction Reports, series C20, Housing Starts; C22, Housing Completions; C25, New One-Family Houses Sold and For Sale; and C27. Price Index of New One-Family Houses Sold.

Source and Title: U.S. Bureau of the Census, Value of New Construction Put in Place Tables: 1200-1203.

Universe, Frequency, and Types of Data: Survey conducted monthly on total value of all construction put in place in the current month, both public and private projects. Construction values include costs of materials and labor, contractors' profits, overhead costs, cost of architectural and engineering work, and miscellaneous project costs. (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: Varies by type of activity: Total cost of private one-family houses started each month is distributed into value put in place using fixed patterns of monthly construction progress; using a multistage probability sample, data for private multifarnity housing are obtained by mail from owners of multiunit projects. Data for residential additions and alternations are obtained in a quarterly survey measuring expenditures; monthly estimates are interpolated from quarterly data. Estimates of value of private nonhousekeeping, nonresidential buildings, and State and local government construction are obtained by mail from owners (or agents) for a probability sample of projects. Estimates of farm nonresidential construction expenditures are based on U.S. Department of Agriculture annual estimates of construction; public utility estimates are obtained from reports submitted to Federal regulatory agencies and from private utility companies; estimates for all other private construction (nonbuilding) are obtained by phasing F. W. Dodge contract award data; estimates of Federal construction are based on monthly data supplied by Federal agencies.

Data Collection and Imputation Procedures: See "Type of Data Collection Operation." Imputation accounts for approximately 20% of estimated value of construction each month.

Estimates of Sampling Error: CV estimates for private nonresidential building construction range from 3% for estimated value of industrial buildings to 10% for miscellaneous buildings. CV is approximately 2% for total new private nonresidential buildings.

Other (nonsampling) Errors: For directly measured data series based on samples, some nonsampling errors may arise from processing errors, imputations, and misunderstanding of questions. Indirect data series are dependent on the validity of the underlying assumptions and procedures.

Sources of Additional Material: U.S. Bureau of the Census, Construction Reports, series C30, Value of New Construction Put in Place.

Source and Title: U.S. Bureau of the Census, Census of Housing

**Tables:** 1221-1225.

Universe, Frequency, and Types of Data: Census of all occupied and vacant housing, excluding group quarters, conducted every 10 years as part of the decennial census (see section 1 above) to determine characteristics of U.S. housing.

Type of Data Collection Operation: For 1970 and 1980, a complete count of 12 housing items. In 1970, other items collected from 5% and 15% probability samples selected from two sets of detailed questions on housing (these two sets having some common items). In 1980, approximately 19% of the housing units were included in the sample.

Data Collection and Imputation Procedures: In 1970, a self-enumeration census using a mailout/mail-back procedure was used in most areas. In 1980, mail questionnaires were used – in even more areas than in 1970, with personal interviews in the remainder. Followup for nonrespondents and identification of vacant units done by phone and personal visit.

Estimates of Sampling Error: Sampling errors for data are estimated for all items collected by

sample and vary by characteristic and geographic area.

Other (nonsampling) Errors: Evaluation studies for 1980 estimated the underenumeration of occupied housing units at 1.5%. The missed rate in 1980 for all units was 2.6% or approximately 2.3 million units, 1 million of which were vacant housing units.

Sources of Additional Material: U.S. Bureau of the Census, 1980 Census of Population and Housing, The Coverage of Housing In the 1980 Census, PHC80-E1, July 1985.

Source and Title: U.S. Bureau of the Census, Annual Housing Survey Tables: See tables citing Annual Housing Survey in source notes.

Universe, Frequency, and Types of Data: Conducted nationally in the fall in odd numbered years to obtain data on the approximately 92 million occupied or vacant housing units in the U.S. (group quarters are excluded). Data include characteristics of occupied housing units, housing inventory changes, vacant units, new housing and mobile home units, financial characteristics, recent mover households, housing and neighborhood quality indicators, and energy characteristics.

Type of Data Collection Operation: The national sample was a multistage probability sample with about 71,800 units eligible for interview in 1983. Sample units, selected within 461 PSU's, were surveyed over a 3-month period.

Data Collection and Imputation Procedures: For 1983, about 75% of the survey was conducted by personal interviews with subsequent followup by telephone or personal visit. The remaining 25% of the sample was conducted by telephone interview.

Estimates of Sampling Error: For the national sample, illustrations of the S.E. of the estimates are provided in the appendix of each report. As an example, the estimated CV is about .4% for the

estimate of the number of owner occupied housing units.

Other (nonsampling) Errors: Response rate was about 95%. Nonsampling errors may result from incorrect or incomplete responses, errors in coding and recording, and processing errors. For the 1983 national sample, approximately 6% of the total housing inventory was not adequately represented by the AHS sample. A reinterview study also indicates some inconsistencies in the data, especially in some attitudinal items.

Sources of Additional Material: U.S. Bureau of the Census, Current Housing Reports, series H-150 and H-170, Annual Housing Survey.

the district of the second control of the se

(See section 1 above for information pertaining to the Census of Population and section 15 pertaining to table 1218.)

**SECTION 27. MANUFACTURES** 

Source and Title: U.S. Bureau of the Census, Census of Manufactures

**Tables:** See tables citing *Census of Manufactures* in source notes in section 27 and also tables 890, 1264, 1367, and 1372.

Universe, Frequency, and Types of Data: Conducted every five years to obtain information on labor materials, capital input and output characteristics, plant location, and legal form of organization for all plants in the United States with one or more employees. Universe was 350,000 manufacturing firms in 1982.

Type of Data Collection Operation: Complete enumeration of data items obtained from 205,000 firms. Administrative records from Internal Revenue Service and Social Security Administration are used for 145,000 smaller single-unit firms, which were determined by various cutoffs based

on size and industry.

Data Collection and Imputation Procedures: Five mail and telephone followups for larger nonrespondents. Data for small single-unit firms (generally those with fewer than 10 employees) not mailed census questionnaires were estimated from administrative records of IRS and SSA. Data for nonrespondents were imputed from related responses or administrative records from IRS and SSA. Approximately 3.7% of total value of shipments was represented by fully imputed records in 1977 (1982 not available).

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Based on evaluation studies, estimates of nonsampling errors for 1972 were about 1.3% for estimated total payroll; 2% for total employment; and 1% for value of shipments. Estimates for later years are not available.

Sources of Additional Material: U.S. Bureau of the Census, Census of Manufactures, 1977, vol. I,

Subject and Special Statistics.

Source and Title: U.S. Bureau of the Census, Annual Survey of Manufactures

Tables: See tables citing *Annual Survey of Manufactures* in source notes in section 27 and also table 1264.

Universe, Frequency, and Types of Data: Conducted annually to provide basic measures of manufacturing activity for intercensal years for all manufacturing establishments having one or more

paid employees.

Type of Data Collection Operation: Sampling frame is 350,000 firms in the 1982 Census of Manufactures (see above), supplemented by Social Security Administration lists of new manufacturers and new manufacturing establishments of multi- establishment companies identified by the Census Bureau's Company Organization Survey from which a probability sample of 55,000 establishments is selected. All establishments with 250+ employees are included along with a probebility sample of smaller establishments.

Data Collection and Imputation Procedures: Survey is conducted by mail with phone and mail followups of nonrespondents. Imputation (for all nonresponse items) is based on previous year

reports, or for new establishments in survey, on industry averages.

Estimates of Sampling Error: Estimated CV's for number of employees and for value added totals are given in annual publications. For State totals, most estimated CV's are 2% or less, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: Response rate is about 85%. Nonsampling errors include those due to collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.

Sources of Additional Material: U.S. Bureau of the Census, Annual Survey of Manufactures, and Technical Paper 24.

#### SECTION 28. DOMESTIC TRADE AND SERVICES

Source and Title: U.S. Bureau of the Census. *Census of Wholesale Trade. Census of Retail Trade.* Census of Service Industries

Tables: See tables citing the above censuses in source notes in section 28 and table 1372 in sec-

Universe, Frequency, and Types of Data: Conducted every five years to obtain data on number of establishments, number of employees, total payroll size, and total sales. In 1977, universe was all employer establishments primarily engaged in wholesale trade, and employer and nonemployer establishments in retail trade or service industries. In 1982, for service industries and retail trade summary data for all establishments are available; kind of business detail by State is available only for establishments with payroll.

Type of Data Collection Operation: All wholesale firms with paid employees surveyed; all retail and service large employer firms surveyed (i.e. all employer firms above the payroll size cutoff established to separate large from small employers) plus a 10-percent sample of smaller employ-

er firms. Firms with no employees were not required to file a census return.

Data Collection and Imputation Procedures: Mail questionnaire is utilized with both mail and telephone followups for nonrespondents. Data for nonrespondents and "nonselected" firms in retail trade and service industries are obtained from administrative records of IRS and the Social Security Administration.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Response rate in 1982 of 87% for single establishment firms; 91% for multi-establishment firms, Item response ranged from 60% to 90% with higher rates for less detailed questions.

Sources of Additional Material: U.S. Bureau of the Census, Appendix A of Census of Retail Trade, vol. I; Census of Service Industries, vol. I; Census of Wholesale Trade, vol. I; and History of the 1977 Economic Censuses, December 1980.

Source and Title: U.S. Bureau of the Census, Current Business Surveys

Tables: 1304-1307, and 1316.

Universe, Frequency, and Types of Data: Provides monthly estimates of retail sales by kind of business and geographic area, and end-of-month inventories of retail stores; wholesale sales and end-of-month inventories; and receipts of selected service industries. (Service monthly survey discontinued after Dec. 1981.)

Type of Data Collection Operation: Probability sample of all firms from a list frame and, additionally, for retail and service an area frame. List frame is the Bureau's Standard Statistical Establishment List (SSEL) updated quarterly for recent "births" from the Social Security Administration list of establishments having an employer identification number. The largest firms are included monthly; a sample of others is included every three months on a rotating basis. The area frame covers businesses not subjected to sampling on the list frame.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone followups for nonrespondents. Imputation made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: CV's are about 1.0% for estimated total retail sales, 2.4% for wholesale sales, 2.0% for wholesale inventories, and 1.5% for selected service receipts. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 10%-15% for monthly retail sales and wholesale sales and about 20%-25% for monthly wholesale inventories.

Sources of Additional Material: U.S. Bureau of the Census, Current Business Reports, Monthly Retail Trade, and Monthly Wholesale Trade. Monthly Selected Services Receipts discontinued after Dec. 1981.

## Appendix IV

## Index to Tables Having Historical Statistics, Colonial Times to 1970 Series

[The most recent historical supplement to the Statistical Abstract is the bicentennial edition, Historical Statistics of the United States, Colonial Times to 1970 (see inside back cover). Listed below are statistical time series (identified by number) appearing in this edition, for which tables in the Statistical Abstract present comparable figures. Historical series are listed only where related or comparable data are available for one or more years later than 1970. In a few instances, it may be necessary to combine figures shown in the Abstract to obtain totals comparable to the series shown in Historical Statistics]

# Appendix V

# Index to Tables Having State and Metropolitan Area Data Book Series

[The 1986 edition of the State and Metropolitan Area Data Book (see inside back cover) contains almost 2,000 subject items of comparative data for States, regions, and divisions. Listed below are the Statistical Abstract tables in this edition and the item numbers from table C (the State table) in the State and Metropolitan Area Data Book (SMADB) for which similar, though not necessarily comparable, comparative State data are presented. Both national-level and State-level Abstract tables are linked to the items in table C in order to provide easy reference to more detailed statistics]

### STATISTICAL ABSTRACT SUPPLEMENTS

State and Metropolitan Area Data Book, 1986. This third edition in a series presents a vast array of data items for each of the 50 States, the District of Columbia, non-New England metropolitan statistical areas, New England county metropolitan areas, all component counties and central cities. Includes data from both Government and private agencies. Similar in content to the County and City Data Book, though presenting more trend data, this edition features 1,873 data items for States; 298 data items for metropolitan areas; and 86 data items for central cities. Also presented are comparative rankings for metropolitan areas and States on a variety of demographic and economic measures, descriptive text, explanatory notes, and source citations. Issued 1986.

County and City Data Book, 1988. This latest in a series of publications presents 203 statistical data items for each State and county in the United States, 134 data items for 952 incorporated cities having 25,000 or more inhabitants in 1980, and 4 items for approximately 9,600 places also. New population data, including age etimates, are featured along with vital statistics, health, crime, personal income, and other data. Also featured are rankings for selected data items and a new appendix on county seats. Forthcoming spring 1986.

Historical Statistics of the United States, Colonial Times to 1970.

A two-part compendium of more than 12,500 statistical time series, largely annual, on American social, economic, political, and geographic development, covering periods from 1610 to 1970. (Out of print.)

Purchase orders for books should be addressed to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, Tel. (202) 783-3238. Publications are also available in Government Printing Office bookstores located in major cities.

#### Machine-Readable Products

- State and Metropolitan Area Data Book, 1986—Files on Diskettes. Provides approximately 2,000 data items for States, 300 for metropolitan areas, and 100 for central cities.
- County and City Data Book, 1988—Files on Diskettes and tapes. Forthcoming.
- County Statistics File 3—Files on Tape. Contains over 1,000 data items for the United States, 50 States, the District of Columbia, and 3,139 counties or county equivalents. Forthcoming.
- Requests for tapes and diskettes should be addressed to the Customer Services Branch, Data User Services Division, U.S. Bureau of the Census, Washington, DC 20233, Tel. (301) 763-4100.

Since 1878, the nation's most authoritative source of information on its people, institutions, and economy. This edition features . .

- \* State Rankings—comparisons of States on 60 data items
- \* 1986 population estimates for metropolitan areas
- An address and telephone contact guide to 30 governmental agencies
- ★ USA Statistics in Brief—a handy pamphlet
- New data on national and State population projections, the elderly, employment projections by industry and occupation, election results by congressional districts, participation in sports activities, and income data for the 50 largest cities

". . .it is one of the world's outstanding statistical documentaries on human affairs and is universally acknowledged as such."

J. A. Livingston
The Philadelphia Inquirer

"... I admit to a lot of eccentricities but few that I will confess in public. Except this: I love statistics. I am an avid fan of the Statistical Abstract of the United States. It's the best book the government publishes."

Robert Samuelson Newsweek Magazine

"For half a century I have used the Abstract to clarify and EROS in thinking. . .I use it in three distinct ways: To explain my homeland, to make comparisons with other nations, and to amuse ARREVIT 1888 exploration."

James A. Michener, Sather Fawaii, Space, and Texas
